**Multidimensional Weakly Singular Integral Equations** Gennadi Vainikko. 2006-11-15 The final aim of the book is to construct effective discretization methods to solve

multidimensional weakly singular integral equations of the second kind on a region of  $R^n$  e.g. equations arising in the radiation transfer theory. To this end, the smoothness of the solution is examined proposing sharp estimates of the growth of the derivatives of the solution near the boundary  $G$ . The superconvergence effect of collocation methods at the collocation points is established. This is a book for graduate students and researchers in the fields of analysis, integral equations, mathematical physics and numerical methods. No special knowledge beyond standard undergraduate courses is assumed.

## *Generalized Ordinary Differential Equations* ?tefan

Schwabik.1992 The contemporary approach of J Kurzweil and R Henstock to the Perron integral is applied to the theory of ordinary differential equations in this book. It focuses mainly on the problems of continuous dependence on parameters for ordinary differential equations. For this purpose, a generalized form of the integral based on integral sums is defined. The theory of generalized differential equations based on this integral is then used, for example, to cover differential equations with impulses or measure differential equations. Solutions of generalized differential equations are found to be functions of bounded variations.The book may be used for a special undergraduate course in mathematics or as a postgraduate text. As there are

**Matematika Teknik I** Dr. Nazrul Effendy, S.T., M.Eng. & Vani Sugiyono, S.T..2013-01-01 Matematika Teknik I adalah salah satu mata kuliah wajib bagi mahasiswa Fakultas Teknik. Salah satu persoalan yang dihadapi oleh mahasiswa Teknik dalam mempelajari Matematika Teknik adalah kurangnya buku-buku acuan dalam bahasa Indonesia, sekaligus kurangnya buku-buku yang mudah untuk dipahami dengan bahasa para mahasiswa.

Karena itu, banyak sekali mahasiswa yang gagal mendapatkan nilai yang bagus untuk mata kuliah ini. Kegagalan mendapatkan nilai bagus bukanlah sesuatu hal yang esensial, namun jika gagal dalam memahami Matematika Teknik secara utuh adalah salah satu hal mendasar yang akan mempersulit mahasiswa di kemudian hari. Matematika Teknik merupakan alat untuk mempermudah mahasiswa dalam mempelajari dan memahami pemodelan matematika pada perkuliahan-perkuliahan selanjutnya yang akan mereka dapatkan selama berkuliah di Fakultas Teknik. Dengan pertimbangan tersebut, diharapkan buku Matematika Teknik I ini mampu menjadi acuan dan sarana untuk mempelajari Matematika Teknik jauh lebih mudah lagi. Buku ini disusun secara sekuensial, sehingga pemahaman pada bab-bab sebelumnya akan membantu dalam memahami bab-bab selanjutnya. Pada setiap sub bab, setelah menyajikan beberapa materi selalu diselipkan contoh soal dan pembahasan, sehingga mahasiswa dapat menguji pemahaman materi sekaligus belajar

*Boundary Properties and Applications of the Differentiated Poisson Integral for Different Domains* Sergo Topuria. 2009 This monograph is devoted to the investigation of boundary properties of the differentiated Poisson integral. It is proved that the boundary properties of the differentiated Poisson integral for different types of domains (circle, sphere, half-plane, half-space, bicylinder) differ substantially from each other and depend on in what sense the integral density is differentiable. The theorems proven here are, in a definite sense, improvable. Relying on the obtained results, the Dirichlet problem is solved for a sphere and a half-space (of a any finite dimension) in the case where the boundary function is measurable and finite almost everywhere.
