Systematische Botanik Matthias Baltisberger, Reto Nyffeler, Alex Widmer.2013-01-16 Flora, Systematik, Phylogenie, Bodenkunde, Pflanzensystematik Das Buch gibt eine Einführung in die Systematik der Pflanzen (Moose, Farne, Samenpflanzen). Das hier vorgestellte Klassifikationssystem basiert auf den aktuellen molekularphylogenetischen Untersuchungen. Die für die einzelnen Taxa wichtigen Merkmale werden vorgestellt und ihre Bedeutung für die Systematik erörtert. In den einzelnen Gruppen werden wichtige einheimische Ordnungen und Familien präsentiert sowie relevante Gattungen und Arten besprochen. Die 600 im Buch aufgenommenen Arten entsprechen der Liste des Zertifikates 600 der Schweizerischen Botanischen Gesellschaft; damit sind implizit

auch die Arten des Zertifikats 200 und des Zertifikats 400 enthalten. Das Buch deckt auch den grössten Teil des für das Zertifikat 600 verlangten allgemeinen Wissens in Feldbotanik ab. Neben systematischen, morphologischen und ökologischen werden auch angewandte Aspekte berücksichtigt (z.B. nahrungsliefernde Pflanzen, Medizinalpflanzen). Da das Schwergewicht auf der einheimischen Flora liegt, werden nichteinheimische Taxa nur dort behandelt, wo sie für das Verständnis der Systematik notwendig sind. Ein ausführliches Kapitel widmet sich den Standortparametern und stellt die in den einzelnen Höhenstufen vorkommenden wichtigsten Vegetationstypen vor. Das Register mit Stichworten und den wissenschaftlichen Pflanzennamen am Schluss des Buches erleichtert das Auffinden von Themen und Taxa.

Methods for Risk Assessment of Transgenic Plants Gösta Kjellsson,Vibeke Simonsen,Klaus Ammann.2012-12-06 The present work is a continuation of the work initiated in Autumn 1991, which resulted in the book, published by Birkhauser Verlag in 1994, entitled: Methods for Risk Assessment of Transgenic Plants. I. Competition, Establishment and Ecosystem Effects. Already when the work on volume 1 started, it was obvious to the authors, that not only the physical establishment of a transgenic plant outside the cultivated area was important for risk assessment, but also the possible gene-transfer from transgenic plants to other plants had to be considered. It was then decided to write a second volume on test methods, as a complement to the first, covering the main topics: Pollination, gene-transfer and population impacts. The main user groups for this volume are scientists and students working with plant population genetics and risk assessment and administrators with responsibility for legislation of transgenic plants. In order to cover such a broad range of topics, specialist knowledge was required. Therefore, colleagues in Denmark and Switzerland, working in these fields in relation to the concerns of using transgenic plants, were asked to participate. The result was a Danish-Swiss cooperation. A list of contributors to the book and their addresses is shown on p. VII. Financial support, which made the work possible, was given by: The National Environmental Research Institute, Denmark, the Federal Office of Environment, Forest and Landscape, Switzerland, the National Forest and Nature Agency, Denmark, the Danish Environmental Protection Agency and the European Commission, DC XI.
