*Interest Rate Modeling* Leif B. G. Andersen, Vladimir V. Piterbarg.2010 The three volumes of Interest rate modeling are aimed primarily at practitioners working in the area of interest rate derivatives, but much of the material is quite general and, we believe, will also hold significant appeal to researchers working in other asset classes. Students and academics interested in financial engineering and applied work will find the material particularly useful for its description of real-life model usage and for its expansive discussion of model calibration, approximation theory, and numerical methods.--Preface.

*Being Alive* Tim Ingold.2011-04-19 Anthropology is a disciplined inquiry into the conditions and potentials of human life. Generations of theorists, however, have expunged life from their accounts, treating it as the mere output of patterns, codes, structures or systems variously defined as genetic or cultural, natural or social. Building on his classic work *The Perception of the Environment*, Tim Ingold sets out to restore life to where it should belong, at the heart of anthropological concern. *Being Alive* ranges over such themes as the vitality of materials, what it means to make things, the perception and formation of the ground, the mingling of earth and sky in the weather-world, the experiences of light, sound and feeling, the role of storytelling in the integration of knowledge, and the potential of drawing to unite observation and description. Our humanity, Ingold argues, does not come ready-made but is continually fashioned in our movements along ways of life. Starting from the idea of life as a process of wayfaring, Ingold presents a radically new understanding of movement, knowledge and description as dimensions not just of being in the world, but of being alive to what is going on there.

*Stone Age Economics* Marshall Sahlins.2013-04-03 *Stone Age Economics* is a classic of economic anthropology, ambitiously tackling the nature of economic life and how to study it comparatively. This collection of six influential essays is one of Marshall Sahlins' most important and enduring works, claiming that stone age economies formed the original affluent society. The book examines notions of production, distribution and exchange in early communities and examines the link between economics and cultural and social factors. This edition includes a new foreword by the author.

*Sterile Insect Technique* Victor A. Dyck, Jorge Hendrichs, A.S. Robinson.2021-01-06 The sterile insect technique (SIT) is an environment-friendly method of pest control that integrates well into area-wide integrated pest management (AW-IPM) programmes. This book takes a generic, thematic, comprehensive, and global approach in describing the principles and practice of the SIT. The strengths and weaknesses, and successes and failures, of the SIT are evaluated openly and fairly from a scientific perspective. The SIT is applicable to some major pests of plant-, animal-, and human-health importance, and criteria are provided to guide in the selection of pests appropriate for the SIT. In the second edition, all aspects of the SIT have been updated and the content considerably expanded. A great variety of subjects is covered, from the history of the SIT to improved prospects for its future application. The major chapters discuss the principles and technical components of applying sterile insects. The four main strategic options in using the SIT — suppression, containment, prevention, and eradication — with examples of each option are described in detail. Other chapters deal with supportive technologies, economic, environmental, and management considerations, and the socio-economic impact of AW-IPM programmes that integrate the SIT. In addition, this second edition includes six new chapters covering the latest developments in the technology: managing pathogens in insect mass-rearing, using symbionts and modern molecular technologies in support of the SIT, applying post-factory nutritional, hormonal, and semiochemical treatments, applying the SIT to eradicate outbreaks of invasive pests, and using the SIT against

mosquito vectors of disease. This book will be useful reading for students in animal-, human-, and plant-health courses. The in-depth reviews of all aspects of the SIT and its integration into AW-IPM programmes, complete with extensive lists of scientific references, will be of great value to researchers, teachers, animal-, human-, and plant-health practitioners, and policy makers.

*Making Connections* Renate Nummela Caine, Geoffrey Caine. 1994 Explains to educators the neuropsychological functions of the brain during learning and how the brain and learning are affected by health, stress, and teaching approaches. Also suggests how the information can be used to help design and run more effective learning experiences for students. Annotation copyright by Book News, Inc., Portland, OR

**Answer Set Programming** Vladimir Lifschitz. 2019-08-29 Answer set programming (ASP) is a programming methodology oriented towards combinatorial search problems. In such a problem, the goal is to find a solution among a large but finite number of possibilities. The idea of ASP came from research on artificial intelligence and computational logic. ASP is a form of declarative programming: an ASP program describes what is counted as a solution to the problem, but does not specify an algorithm for solving it. Search is performed by sophisticated software systems called answer set solvers. Combinatorial search problems often arise in science and technology, and ASP has found applications in diverse areas—in historical linguistics, in bioinformatics, in robotics, in space exploration, in oil and gas industry, and many others. The importance of this programming method was recognized by the Association for the Advancement of Artificial Intelligence in 2016, when AI Magazine published a special issue on answer set programming. The book introduces the reader to the theory and practice of ASP. It describes the input language of the answer set solver CLINGO, which was designed at the University of Potsdam in Germany and is used today by ASP programmers in many countries. It includes numerous examples of ASP programs and presents the mathematical theory that ASP is based on. There are many exercises with complete solutions.

**Teaching at Its Best** Linda B. Nilson. 2010-04-20 Teaching at Its Best This third edition of the best-selling handbook offers faculty at all levels an essential toolbox of hundreds of practical teaching techniques, formats, classroom activities, and exercises, all of which can be implemented immediately. This thoroughly revised edition includes the newest portrait of the Millennial student; current research from cognitive psychology; a focus on outcomes maps; the latest legal options on copyright issues; and how to best use new technology including wikis, blogs, podcasts, vodcasts, and clickers. Entirely new chapters include subjects such as matching teaching methods with learning outcomes, inquiry-guided learning, and using visuals to teach, and new sections address Felder and Silverman's Index of Learning Styles, SCALE-UP classrooms, multiple true-false test items, and much more. Praise for the Third Edition of Teaching at Its Best Everyone veterans as well as novices will profit from reading Teaching at Its Best, for it provides both theory and practical suggestions for handling all of the problems one encounters in teaching classes varying in size, ability, and motivation. Wilbert McKeachie, Department of Psychology, University of Michigan, and coauthor, McKeachie's Teaching Tips This new edition of Dr. Nilson's book, with its completely updated material and several new topics, is an even more powerful collection of ideas and tools than the last. What a great resource, especially for beginning teachers but also for us veterans! L. Dee Fink, author, Creating Significant Learning Experiences This third edition of Teaching at Its Best is successful at weaving the latest research on teaching and learning into what was already a thorough exploration of each topic. New information on how we learn, how students develop, and innovations in instructional strategies complement the solid foundation established in the first two editions. Marilla D. Svinicki, Department of Psychology, The University of Texas, Austin, and coauthor, McKeachie's Teaching Tips

**Emmy Noether 1882-1935** DICK. 2012-12-06 N 1964 at the World's Fair in New York I City one room was dedicated solely to mathematics. The display included a very attractive and informative mural, about 13 feet long, sponsored by one of the largest computer manufacturing companies and presenting a brief survey of the history of mathematics. Entitled, Men of Modern Mathematics, it gives an outline of the development of that science from approximately 1000 B. C. to the year of the

exhibition. The first centuries of this time span are illustrated by pictures from the history of art and, in particular, architecture; the period since 1500 is illuminated by portraits of mathematicians, including brief descriptions of their lives and professional achievements. Close to eighty portraits are crowded into a space of about fourteen square feet; among them, only one is of a woman. Her face—mature, intelligent, neither pretty nor handsome—may suggest her love of science and creative gift, but certainly reveals a likeable personality and a genuine kindness of heart. It is the portrait of Emmy Noether (1882 - 1935), surrounded by the likenesses of such famous men as Joseph Liouville (1809-1882), Georg Cantor (1845-1918), and David Hilbert (1862 -1943). It is accompanied by the following text: Emmy Noether, daughter of the mathematician Max, was often called Der Noether, as if she were a man.

**Masculinities** R. W. Connell, Raewyn Connell. 2005 This is an exciting new edition of R.W. Connell's ground-breaking text, which has become a classic work on the nature and construction of masculine identity. Connell argues that there is not one masculinity, but many different masculinities, each associated with different positions of power. In a world gender order that continues to privilege men over women, but also raises difficult issues for men and boys, his account is more pertinent than ever before. In a substantial new introduction and conclusion, Connell discusses the development of masculinity studies in the ten years since the book's initial publication. He explores global gender relations, new theories, and practical uses of masculinity research. Looking to the future, his new concluding chapter addresses the politics of masculinities, and the implications of masculinity research for understanding current world issues. Against the backdrop of an increasingly divided world, dominated by neo-conservative politics, Connell's account highlights a series of compelling questions about the future of human society. This second edition of Connell's classic book will be essential reading for students taking courses on masculinities and gender studies, and will be of interest to students and scholars across the humanities and social sciences.

**The Graphic Syllabus and the Outcomes Map** Linda B. Nilson. 2009-12-22 This book shows college instructors how to communicate their course organization to students in a graphic syllabus—a one-page diagram, flowchart, or concept map of the topical organization—and an outcomes map—a one-page flowchart of the sequence of student learning objectives and outcomes from the foundational through the mediating to the ultimate. It also documents the positive impact that graphics have on student learning and cautions readers about common errors in designing graphic syllabi.

**The Early Settlement of North America** Gary Haynes. 2002-11-14 The Early Settlement of North America is an examination of the first recognizable culture in the New World: the Clovis complex. Gary Haynes begins his analysis with a discussion of the archaeology of Clovis fluted points in North America and a review of the history of the research on the topic. He presents and evaluates all the evidence that is now available on the artefacts, the human populations of the time, and the environment, and he examines the adaptation of the early human settlers in North America to the simultaneous disappearance of the mammoths and mastodons. Haynes offers a compelling re-appraisal of our current state of knowledge about the peopling of this continent and provides a significant new contribution to the debate with his own integrated theory of Clovis, which incorporates vital new biological, ecological, behavioural and archaeological data.

**Mathematics for Finance** Marek Capinski, Tomasz Zastawniak. 2006-04-18 This textbook contains the fundamentals for an undergraduate course in mathematical finance aimed primarily at students of mathematics. *A Primer for the Mathematics of Financial Engineering* Dan Stefanica. 2011

*Financial Calculus* Martin Baxter, Andrew Rennie. 1996-09-19 The rewards and dangers of speculating in the modern financial markets have come to the fore in recent times with the collapse of banks and bankruptcies of public corporations as a direct result of ill-judged investment. At the same time, individuals are paid huge sums to use their mathematical skills to make well-judged investment decisions. Here now is the first rigorous and accessible account of the mathematics behind the pricing, construction and hedging of derivative securities. Key concepts such as martingales, change of measure, and the Heath-Jarrow-Morton model are described with mathematical precision in a style tailored for market practitioners. Starting from discrete-time hedging on binary trees, continuous-time stock models (including Black-Scholes) are developed. Practicalities are stressed, including examples from stock, currency and interest rate markets, all accompanied by graphical illustrations with realistic data. A full glossary of probabilistic and financial terms is provided. This unique book will be an essential purchase for market practitioners, quantitative analysts, and derivatives traders.

The Paleoanthropology and Archaeology of Big-Game Hunting John D. Speth. 2010-09-08 Since its inception, paleoanthropology has been closely wedded to the idea that big-game hunting by our hominin ancestors arose, first and foremost, as a means for acquiring energy and vital nutrients. This assumption has rarely been questioned, and seems intuitively obvious—meat is a nutrient-rich food with the ideal array of amino acids, and big animals provide meat in large, convenient packages. Through new research, the author of this volume provides a strong argument that the

primary goals of big-game hunting were actually social and political—increasing hunter's prestige and standing—and that the nutritional component was just an added bonus. Through a comprehensive, interdisciplinary research approach, the author examines the historical and current perceptions of protein as an important nutrient source, the biological impact of a high-protein diet and the evidence of this in the archaeological record, and provides a compelling reexamination of this long-held conclusion. This volume will be of interest to researchers in Archaeology, Evolutionary Biology, and Paleoanthropology, particularly those studying diet and nutrition.

**Foundational Issues in Human Brain Mapping** Stephen José Hanson, Martin Bunzl.2010 The field of neuroimaging has reached a watershed and critiques and emerging trends are raising foundational issues of methodology, measurement, and theory. Here, scholars reexamine these issues and explore controversies that have arisen in cognitive science, cognitive neuroscience, computer science, and signal processing.

**Obstetric Fistula** Robert F. Zacharin.2012-12-06 Obstetric fistula is as old as mankind. While the incidence has diminished progressively with better health care in Western societies, the situation has changed little in many developing countries. Fistulae of pelvic organs, often monstrous defects, still are a major complication of child-birth causing misery to uncounted young women, and if they cannot find help in one of the very few hospitals with trained specialists, they became urological cripples losing everything: family, home and job. The magnitude of the problem is illustrated by some figures given by Reginald and Catherine Hamlin—about 700 fistula patients treated each year—a total of over 10,000 cases operated upon in their fistula hospital in Addis Ababa, Ethiopia. Most of these injuries could be prevented by better health care at the village level as some studies have shown conclusively. The incidence of fistula is an indicator of the standard of health and obstetrical care. The author of this book—Obstetric Fistula—is an internationally known Australian gynaecologist who for many years has been interested in all aspects of gynaecological urology, especially urinary stress incontinence, other forms of involuntary loss of urine, and associated gynaecological conditions. He has devised a number of new operations to treat pelvic defects. Robert Zacharin's interest in obstetric fistula was a consequence of his surgical activity in developing countries.

*Functions Modeling Change: A Preparation for Calculus, 4th Edition* Eric Connally, Deborah Hughes-Hallett, Andrew M. Gleason.2010-11-12 The fourth edition of this market-leading text helps instructors motivate concepts, and students develop critical thinking skills. Functions Modeling Change 4th edition, is designed to accomplish the main goals of the Precalculus course: to build a solid mathematical foundation and prepare students for Calculus. The authors achieve this by focusing on a small number of key topics, thereby emphasizing depth of understanding rather than breadth of coverage. Functions Modeling Change 4th edition, presents each function symbolically, numerically, graphically and verbally (the Rule of Four). Additionally, a large number of real-world applications, examples, and problems enable students to create mathematical models that relate to the world around them.

Science and Empires P. Petitjean, Cathérine Jami, A.M. Moulin.2012-12-06 SCIENCE AND EMPIRES: FROM THE INTERNATIONAL COLLOQUIUM TO THE BOOK Patrick PETITJEAN, Catherine JAMI

and Anne Marie MOULIN The International Colloquium Science and Empires - Historical Studies about Scientific Development and European Expansion is the product of an International Colloquium, Sciences and Empires - A Comparative History of Scientific Exchanges: European Expansion and Scientific Development in Asian, African, American and Oceanian Countries. Organized by the REHSEIS group (Research on Epistemology and History of Exact Sciences and Scientific Institutions) of CNRS (National Center for Scientific Research), the colloquium was held from 3 to 6 April 1990 in the UNESCO building in Paris. This colloquium was an idea of Professor Roshdi Rashed who initiated this field of studies in France some years ago, and proposed Sciences and Empires as one of the main research programmes for the The project to organize such a colloquium was a bit REHSEIS group. of a gamble. Its subject, reflected in the title Sciences and Empires, is not a currently-accepted sub-discipline of the history of science; rather, it refers to a set of questions which found autonomy only recently. The terminology was strongly debated by the participants and, as is frequently suggested in this book, awaits fuller clarification.

**The MIT Encyclopedia of the Cognitive Sciences (MITECS)** Robert A. Wilson, Frank C. Keil. 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition. The MIT Encyclopedia of the Cognitive Sciences (MITECS) is a landmark, comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries, from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article, written by a leading researcher in the field, provides an accessible introduction to an important concept in the cognitive sciences, as well as references or further readings. Six extended essays, which collectively serve as a roadmap to the articles, provide overviews of each of six major areas of cognitive science: Philosophy; Psychology; Neurosciences; Computational Intelligence; Linguistics and Language; and Culture, Cognition, and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.

**Precalculus** Michael Sullivan. 2000 For courses in College Algebra, Algebra & Trigonometry, Precalculus, and Trigonometry which requires student use of a graphing calculator. Using the graphing utility to enhance mathematics, not replace it, this text approaches technology as a tool to solve problems, motivate concepts, and explore ideas. Many problems are solved using both algebra and a graphing utility, with the benefits of each illustrated. Throughout, applications and examples using real data enable students to make connections between the mathematics learned and familiar situations. The authors' user-friendly approach helps students develop the skills needed to succeed in subsequent mathematics courses.

*Options, Futures, and Other Derivatives* John Hull. 2006 For advanced undergraduate or graduate business, economics, and financial engineering courses in derivatives, options and futures, financial engineering or risk management. Designed to bridge the gap between theory and practice, this successful book is regarded as the bible in trading rooms throughout the world. Hull offers a clear presentation with various numerical examples, as well as good practical knowledge of how derivatives are priced and traded.

Area-wide Integrated Pest Management Jorge Hendrichs, Rui Pereira, Marc J.B. Vreysen. 2021-02-01 Over 98% of sprayed insecticides and 95% of herbicides reach a destination other than their target species, including non-target species, air, water and soil. The extensive reliance on insecticide use reduces biodiversity, contributes to pollinator decline, destroys habitat, and threatens endangered species. This book offers a more effective application of the Integrated Pest Management (IPM) approach, on an area-wide (AW) or population-wide (AW-IPM) basis, which aims at the management of the total population of a pest, involving a coordinated effort over often larger areas. For major livestock pests, vectors of human diseases and pests of high-value crops with low pest tolerance, there are compelling economic reasons for participating in AW-IPM. This new textbook attempts to address various fundamental components of AW-IPM, e.g. the importance of relevant problem-solving research, the need for planning and essential baseline data collection, the significance of integrating adequate tools for appropriate control strategies, and the value of pilot trials, etc. With

chapters authored by 184 experts from more than 31 countries, the book includes many technical advances in the areas of genetics, molecular biology, microbiology, resistance management, and social sciences that facilitate the planning and implementing of area-wide strategies. The book is essential reading for the academic and applied research community as well as national and regional government plant and human/animal health authorities with responsibility for protecting plant and human/animal health.

**With a Critical Eye** Arthur J. Vidich. 2009 Internationally renowned sociologist Arthur J. Vidich (1922-2006) was an active researcher and teacher whose career spanned the second half of the twentieth century. *With a Critical Eye: An Intellectual and His Times* recounts Vidich's career in the wider cultural context of his life and work. Providing a window into post-World War II intellectual life, the richness of the autobiography lies not only in Vidich's perspectives on the academic world but also in his personal and sociological observations about the world around him. Best known for his book *Small Town in Mass Society* (co-authored with Joseph Berman, 1958), Vidich taught for more than forty years at the New School for Social Research in New York. He published eighteen books, co-edited a book series with Robert Jackall, and was the founding editor of the *International Journal of Politics, Culture, and Society*. Vidich provides a valuable lens ... on a profoundly important time in the formation of the modern social sciences, when the changes in the U.S. were having formative impacts on academe in other parts of the world, writes Robert J. Antonio, professor of sociology at the University of Kansas. The autobiography is lucidly and unpretentiously written. Book jacket.

**Radiology of the small intestine** Pierre Bret, Christine Cuche, Gerard Schmutz. 2013-12-11 There is a tradition behind the current radiologic examination of the small bowel. Many of the great names in gastrointestinal radiology have established their reputations on the basis of their work in the small bowel. This is an area which is assuming ever greater importance for radiologists as its mucosal surface continues to elude the endoscopist. Moreover, it is an aspect of radiology which calls for the greatest technical and interpretative skill. It is a great pleasure to welcome the English language version of this beautiful work on Radiology of the Small Intestine. English speaking physicians are frequently not as familiar with the large body of work published in French as they should be. Tant pis ! Dr. Bret and his co-workers have been pioneers in the pursuit of excellence in gastrointestinal radiology. During all the years that I have been involved in this field, I have admired their work.
