Review of Medical Dosimetry William Amestoy.2015-03-03 This study guide will be a reliable support and easy-to-use source of information for students in the fields of dosimetry, physics, radiation oncology, and therapy as they progress through the educational levels in preparation for

board examinations. The theoretical and practical knowledge gained by students on previous courses or in clinical settings is reinforced by means of almost 1200 questions and accompanying detailed analytical answers. In order to cater for the needs of all students, the questions are arranged according to three levels of difficulty. The level 1 questions are mainly intended for those hoping to pass the Medical Dosimetrist Certification Board (MDCB) exam but will also be beneficial for Medical Physics candidates taking written exams and for Radiation Oncology residents. The level II questions are in general clinically related and will be relevant for any student, while the level III questions are advanced and are especially suitable for American Board of Radiology candidates or those taking equivalent exams elsewhere in the world. The study guide is broken down into different subject areas, with provision of multiple questions and answers on each subject. In addition, the mathematical and physics questions include brief explanations of how the student can solve each problem. At the end of the guide, three practice tests are included with the same number of questions as are found in the MDCB exam. These tests will help students to test their knowledge and improve their test-taking speed.

Visuospatial Processing for Education in Health and Natural Sciences Juan C. Castro-Alonso.2019-08-05 Visuospatial processing is key to learn and perform professionally in the domains of health and natural sciences. As such, there is accumulating research showing the importance of visuospatial processing for education in diverse health sciences (e.g., medicine, anatomy, surgery) and in many natural sciences (e.g., biology, chemistry, physics, geology). In general, visuospatial processing is treated separately as (a) spatial ability and (b) working memory with visuospatial stimuli. This book attempts to link these two research perspectives and present visuospatial processing as the cognitive activity of two components of working memory (mostly the visuospatial sketch pad, and also the central executive), which allows to perform in both spatial ability and working memory tasks. Focusing on university education in the fields of health sciences and natural sciences, the chapters in this book describe the abilities of mental rotation, mental folding, spatial working memory, visual working memory, among others, and how different variables affect them. Some of these variables, thoroughly addressed in the book, are sex (gender), visualizations, interactivity, cognitive load, and embodiment. The book concludes with a chapter presenting VAR, a battery of computer-based tests to measure different tasks entailing visuospatial processing. With contributions by top educational psychologists from around the globe, this book will be of interest to a broad array of readers across the disciplines.

Physical Testing of Textiles B P Saville. 1999-01-08 This book examines the physical testing of textiles in the form of fibre, yarn and fabric, the emphasis throughout being on standard and reproducible tests. After an introductory explanation of sampling and measurement, the author explores the effects of moisture on textiles, then goes on to discuss fibre dimension, yarn tests for linear density, twist, evenness and hairiness, tensile strength, and dimensional stability and serviceability. Also covered are aspects of comfort and fabric handle, colour fastness and quality assurance. The book's comprehensive coverage of the physical properties of textiles makes it an essential reference for managers in the textiles industry concerned with quality assurance, garment and fabric technologists, and students of textile science and engineering.

Tribology of Reciprocating Engines D. Dowson, C. M. Taylor, M. Godet. 2013-10-22 Tribology of Reciprocating Engines documents the proceedings of the 9th Leeds-Lyon Symposium on Tribology held at the University of Leeds, England on September 7-10, 1982. This book emphasizes advances in the working principles of the tribological components that operate with relative motion. The topics discussed include the dynamic analysis of engine bearing systems, measurement of oil film

thickness in diesel motor main bearings, and temperature variations in crankshaft bearings. The theoretical and experimental study of ring-liner friction, tribology in the cylinders of reciprocating compressors, and lubricant properties in the diesel engine piston ring zone are also described. This text likewise considers the metallurgy of scoring and scuffing failure, impact of oil contamination on wear and energy losses, and role of tappet surface morphology and metallurgy in cam/tappet life. This compilation is a good reference for tribologists, lubrication engineers, and specialists researching on reciprocating engines.

Comprehensive Structural Integrity Ian Milne, R. O. Ritchie, B.L. Karihaloo. 2003-07-25 The aim of this major reference work is to provide a first point of entry to the literature for the researchers in any field relating to structural integrity in the form of a definitive research/reference tool which links the various sub-disciplines that comprise the whole of structural integrity. Special emphasis will be given to the interaction between mechanics and materials and structural integrity applications. Because of the interdisciplinary and applied nature of the work, it will be of interest to mechanical engineers and materials scientists from both academic and industrial backgrounds including bioengineering, interface engineering and nanotechnology. The scope of this work encompasses, but is not restricted to: fracture mechanics, fatigue, creep, materials, dynamics, environmental degradation, numerical methods, failure mechanisms and damage mechanics, interfacial fracture and nano-technology, structural analysis, surface behaviour and heart valves. The structures under consideration include: pressure vessels and piping, off-shore structures, gas installations and pipelines, chemical plants, aircraft, railways, bridges, plates and shells, electronic circuits, interfaces, nanotechnology, artificial organs, biomaterial prostheses, cast structures, mining... and more. Case studies will form an integral part of the work.
