Interdisciplinarity in Entrepreneurship Diego Matricano.2023-06-08 In response to the increasing move by scholars to reference other fields of knowledge in the advancement of entrepreneurship studies, this book offers an interdisciplinary approach to the study of entrepreneurship. The author investigates five main issues about entrepreneurial processes: the origin of entrepreneurship, the purpose to achieve, the way decisions are made, the creation of entrepreneurial networks and ecosystems. Respectively, these issues are analysed from new perspectives related to other disciplines, such as mythology, philosophy, mathematics, chemistry, and biology. In this way, the book investigates pervading questions about entrepreneurial processes that are still unsolved. By adopting this novel interdisciplinary approach, the book opens up new avenues of research in entrepreneurship studies.

The Quotable Lewis Jerry Root, Wayne Martindale.2012-03-12 This book presents more than 1,500 quotes from C. S. Lewis's writings, providing ready access to his thoughts on a variety of topics. An exhaustive index references key words and concepts, allowing readers to easily find quotes on any subject of interest.

Organic Chemistry T. W. Graham Solomons, Craig B. Fryhle.1999-08-10 On the cover of this book is a Pacific yew tree, found in the ancient forests of the Pacific Northwest. The bark of the Pacific yew tree produces Taxol, found to be a highly effective drug against ovarian and breast cancer. Taxol blocks mitosis during eukaryotic cell division. The supply of Taxol from the Pacific yew tree is vanishingly small, however. A single 100-year-old tree provides only about one dose of the drug (roughly 300 mg). For this reason, as well as the spectacular molecular architecture of Taxol, synthetic organic chemists fiercely undertook efforts to synthesize it. Five total syntheses of Taxol have thus far been reported. Now, a combination of isolation of a related metabolite from European yew needles, and synthesis of Taxol from that intermediate, supply the clinical demand. This case clearly demonstrates the importance of synthesis and the use of organic chemistry. It's just one of the many examples used in the text that will spark the interest of students and get them involved in the study of organic chemistry!

Market-Driven Management Jean-Jacques Lambin, Isabelle Schuiling.2012-07-19 Market-Driven Management adopts a broad approach to marketing, integrating the strategic and operational elements of the discipline. Lambin's unique approach reflects how marketing operates empirically, as both a business philosophy and an action-oriented process. Motivated by the increased complexity of markets, globalisation, deregulation, and the development of e-commerce, the author challenges the traditional concept of the 4Ps and the functional roles of marketing departments, focusing

instead on the concept of market orientation. The book considers all of the key market stakeholders, arguing that developing market relations and enhancing customer value is the responsibility of every member of the organization, and that the development of this customer value is the only way for a firm to achieve profit and growth. New to this edition: - Greater coverage of ethical issues and corporate social responsibility; cultural diversity; value and branding and the economic downturn - Broad international perspective - Thoroughly revised to reflect the latest academic thinking and research With its unique approach, international cases and complementary online resources, this book is ideal for postgraduate and upper level undergraduate students of marketing, and for MBAs and Executive MBAs.

1-2 Thessalonians Wesleyan Publishing House.2014-09-24 When God speaks his people listen...and are transformed. Nothing speaks so powerfully into a life as God's inspired Scriptures, made personal and life-changing by his Holy Spirit. To hear God's voice, we must begin with his Word. The Wesley Bible Studies series provides a thoughtful and powerful thirteen-week survey of key Scriptures, combining accessible commentary from contemporary teachers with integrated highlights from the hymns, life experiences, and complete writings of John and Charles Wesley. And for each week, creative and engaging questions likewise foster deeper fellowship and growth. The Wesley Bible Studies series is a powerful tool that God's Spirit can use to reveal his truth in you - to form in you a deeper holiness of heart and life.

Language Typology and Language Universals Martin Haspelmath.2001 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages, but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction. For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints, while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation. To attain these objectives, the series will aim for a standard comparable to that of the leading handbooks in other disciplines, and to this end will strive for comprehensiveness, theoretical explicitness, reliable documentation of data and findings, and up-to-date methodology. The editors, both of the series and of the individual volumes, and the individual contributors, are committed to this aim. The languages of publication are English, German, and French. The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks; however no inflexible pre-set limits will be imposed on the scope of each volume. The series is open-ended, and can thus take account of further developments in the field. This conception, coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care, means that there is no set time-table for the publication of the whole series. Each volume will be a self-contained work, complete in itself. The order in which the handbooks are published does not imply any rank ordering, but is determined by the way in which the series is organized; the editor of the whole series enlist a competent editor for each individual volume. Once the principal editor for a volume has been found, he or she then has a completely free hand in the choice of co-editors and contributors. The editors plan each volume independently of the others, being governed only by general formal principles. The series editor only intervenes where questions of delineation between individual volumes are concerned. It is felt that this (*modus operandi*) is best suited to achieving the objectives of the series, namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume.

Teaching and Learning in the Science Laboratory Dimitris Psillos,H. Niedderer.2006-05-05 This book aims to improve the design and organization of innovative laboratory practices and to provide tools

and exemplary results for the evaluation of their effectiveness, adequate for labwork in order to promote students' scientific understanding in a variety of countries. The papers are based on research and developmental work carried out in the context of the European Project Labwork in Science Education (LSE). This substantial and significant body of research is now made available in English.

The History of Science and the New Humanism George Sarton.1962 In this classic work, the foremost historian of science in our time, George Sarton, sums up his reflections on the role of science and of the humanities in our culture. Voicing his opposition to the old-fashioned humanists on the one hand, and to the “uneducated” men of science and technicians on the other, Sarton points out to the former that the humanities without scientific are essentially incomplete. He warns the latter that without history, without philosophy, without arts and letters, without a living religion, human life on this planet would cease to be worthwhile. After outlining his “Faith of a Humanist” in the opening section, Sarton goes on to analyze “The History of Science and the History of Civilization,” to discuss the progress of scientific thought since ancient times in “East and West,” and to propose the solution for the educational and cultural crisis of our time in “The New Humanism” and in “The History of Science and the Problems of Today.” He concludes not only that science is a source of technological development that has changed the face of the earth and has convulsed our lives for good and evil, but that it nonetheless affords the best means of understanding the world, its people, and the multitude of their relationships. “Science is the conscience of mankind.” Included in this edition is Robert M. Merton's address before the Sarton Centennial meeting of November 1984. It is a stunning tour de force in its own right, providing insights into Sarton, teaching and research at Harvard in the 1930s, and the personal interaction between Sarton the mentor, and Merton the pupil. The essay supplements May Sarton's earlier “Informal Portrait of George Sarton.”

Preventive Conservation in Museums Chris Caple. 2011 Preventive Conservation in Museums makes available and comprehensible the diverse literature and ideas of preventive conservation to an audience with a limited scientific background, principally those studying museum studies or engaged in the museum profession. It bridges the gap between the basic museum generated literature and technical and detailed conservation literature. The area of preventative conservation has developed greatly in recent years and has adopted a far more holistic approach. The development of the concepts of risk analysis, management of conservation and how preventative conservation relates to the importance of traditional beliefs and approaches to artefacts have all made an impact on the subject in recent years along with the advance of instrumentation over the last thirty years. The next generation of ideas that will affect preventive conservation practice are just starting to emerge, including: detailed modelling of the environments of buildings and the sustainability of the artefactual and building heritage. Preventive Conservation in Museums highlights the wide variety of threats, develops the concept of an holistic appreciation of these threats, and too appreciates the need to prioritise the appropriate forms of response. It uses a careful balance of sources, some technical, some theoretical, some practical as well as case studies to explore threats and their mitigation. For all those people involved in preventive conservation, be they students or professionals, this volume will be an invaluable summary of the past, present and future of the discipline. ãee
