Engineering Education and Practice in the United States National Research Council (U.S.). Subcommittee on Engineering Educational Systems. Panel on Technology Education.1985 The Panel on Technology Education was one of four panels established by the Committee on the Education and Utilization of the Engineer of the National Research Council. This panel's task was to investigate the technology aspects of the preparation of engineers in the United States. This report deals with: (1) The History of Technical Institutes; (2) Engineering Technology and Industrial Technology; (3) Engineering Technology and Engineering; (4) Engineering Technology Education; (5) Cooperative Education and Engineering Technology; (6) Accreditation, Certification, and Licensing; (7) Manpower Considerations; (8) The Impact of High Technology; and (9) Allocating Resources for Engineering Technology. An executive summary provides a set of recommendations developed as a part of the panel's work. (TW)

**Engineering Technology Education in the United States** National Academy of Engineering,Committee on Engineering Technology Education in the United States.2017-01-27 The vitality of the innovation economy in the United States depends on the availability of a highly educated technical workforce. A key component of this workforce consists of engineers, engineering technicians, and engineering technologists. However, unlike the much better-known field of engineering, engineering technology (ET) is unfamiliar to most Americans and goes unmentioned in most policy discussions about the US technical workforce. Engineering Technology Education in the United States seeks to shed light on the status, role, and needs of ET education in the United States.

New Ways in Management Training Geoffrey Hutton,Cyril Sofer.2013-07-04 Tavistock Press was established as a co-operative venture between the Tavistock Institute and Routledge & Kegan Paul (RKP) in the 1950s to produce a series of major contributions across the social sciences. This volume is part of a 2001 reissue of a selection of those important works which have since gone out of print, or are difficult to locate. Published by Routledge, 112 volumes in total are being brought together under the name The International Behavioural and Social Sciences Library: Classics from the Tavistock Press. Reproduced here in facsimile, this volume was originally published in 1958 and is available individually. The collection is also available in a number of themed mini-sets of between 5 and 13 volumes, or as a complete collection.

Review of the Research Program of the Partnership for a New Generation of Vehicles Transportation Research Board,Commission on Engineering and Technical Systems,Board on Energy and Environmental Systems,Standing Committee to Review the Research Program of the Partnership for a New Generation of Vehicles.2000-07-27 Review of the Research Program of the Partnership for a New Generation of Vehicles reviews the Partnership for a New Generation of Vehicles (PNGV). The PNGV program is a cooperative research and development (R&D) program between the federal government and the United States Council for Automotive Research (USCAR). A major objective of the PNGV program is to develop technologies for a new generation of vehicles with fuel economies up to three times (80 miles per gallon [mpg]) those of comparable 1994 family sedans. At the same time, these vehicles must be comparable in terms of performance, size, utility, and cost of ownership and operation and must meet or exceed federal safety and emissions requirements. The intent of the PNGV program is to develop concept vehicles by 2000 and production prototype vehicles by 2004. This report examines the overall adequacy and balance of the PNGV research program to meet the program goals and requirements (i.e., technical objectives, schedules, and rates of progress). The report also discusses ongoing research on fuels, propulsion engines, and emission controls to meet emission requirements and reviews the USCAR partners' progress on PNGV concept vehicles for 2000.

**Standards for Engineering Qualifications** Fédération européenne d'associations nationales d'ingénieurs. Secrétariat général.1975 The study was prepared, at the request of unesco, by the European Federation of National Associations of Engineers (FEANI), an organization grouping the engineering associations of 18 countries and including 650,000 engineers. The differences in the types of engineering programs and graduation requirements of the various countries are examined, along with the differences in terminology and definitions used in the engineering education systems. The qualifications for becoming a professional engineer and the standards of engineering societies are reported, in addition to the role of the engineer in the industry of each particular country. The report concludes with an examination of the common denominators of the Continental and the British engineering education systems and discusses the possibilities of applying the European experiment of FEANI to other continents. **Engineering Education** Board on Engineering Education,Commission on Engineering and Technical Systems,Division on Engineering and Physical Sciences,National Research Council.1995-07-14 Traditionally,

engineering education books describe and reinforce unchanging principles that are basic to the field. However, the dramatic changes in the engineering environment during the last decade demand a paradigm shift from the engineering education community. This revolutionary volume addresses the development of long-term strategies for an engineering education system that will reflect the needs and realities of the United States and the world in the 21st century. The authors discuss the critical challenges facing U.S. engineering education and present a plan addressing these challenges in the context of rapidly changing circumstances, technologies, and demands.

The report deals with: (1) Participation in Continuing Education--The Engineer's Perspective; (2) The Role of Industry; (3) The Role of the University; (4) The Role of Professional Societies; (5) The Role of Proprietary Schools; and (6) The Role of Government. A reference list and bibliography are included, along with appendices which address a pilot study for a study of policymakers' attitudes toward continuing education, a list of 1984 continuing education programs of technical societies, and a professional society survey. *Standards for K-12 Engineering Education?* National Research Council,Committee on Standards for K-12 Engineering Education.2010-10-28 The goal of this study was to assess the value and feasibility of developing and implementing content standards for engineering education at the K-12 level. Content standards have been developed for three disciplines in STEM education-science, technology, and mathematic-but not for engineering. To date, a small but growing number of K-12 students are being exposed to engineering-related materials, and limited but intriguing evidence suggests that engineering education can stimulate interest and improve learning in mathematics and science as well as improve understanding of engineering and technology. Given this background, a reasonable question is whether standards would improve the quality and increase the amount of teaching and learning of engineering in K-12 education. The book concludes that, although it is theoretically possible to develop standards for K-12 engineering education, it would be extremely difficult to ensure their usefulness and effective implementation. This conclusion is supported by the following findings: (1) there is relatively limited experience with K-12 engineering education in U.S. elementary and secondary schools, (2) there is not at present a critical mass of teachers qualified to deliver engineering instruction, (3) evidence regarding the impact of standards-based educational reforms on student learning in other subjects, such as mathematics and science, is inconclusive, and (4) there are significant barriers to introducing stand-alone standards for an entirely new content area in a curriculum already burdened with learning goals in more established domains of study.

**Understanding the Educational and Career Pathways of Engineers** National Academy of Engineering,Committee on Understanding the Engineering Education-Workforce Continuum.2019-01-26 Engineering skills and knowledge are foundational to technological innovation and development that drive long-term economic growth and help solve societal challenges. Therefore, to ensure national competitiveness and quality of life it is important to understand and to continuously adapt and improve the educational and career pathways of engineers in the United States. To gather this understanding it is necessary to study the people with the engineering skills and knowledge as well as the evolving system of institutions, policies, markets, people, and other resources that together prepare, deploy, and replenish the nation's engineering workforce. This report explores the characteristics and career choices of engineering graduates, particularly those with a BS or MS degree, who constitute the vast majority of degreed engineers, as well as the characteristics of those with non-engineering degrees who are employed as engineers in the United States. It provides insight into their educational and career pathways and related decision making, the forces that influence their decisions, and the implications for major elements of engineering education-to-workforce pathways.

**The Engineer's Guide to Plant Layout and Piping Design for the Oil and Gas Industries** Geoff B. Barker.2017-11-25 The Engineer's Guide to Plant Layout and Piping Design for the Oil and Gas Industries gives pipeline engineers and plant managers a critical real-world reference to design, manage, and implement safe and effective plants and piping systems for today's operations. This book fills a training void with complete and practical understanding of the requirements and procedures for producing a safe, economical, operable and maintainable process facility. Easy to understand for the novice, this guide includes critical standards, newer designs, practical checklists and rules of thumb. Due to a lack of structured training in academic and technical institutions, engineers and pipe designers today may understand various computer software programs but lack the fundamental understanding and implementation of how to lay out process plants and run piping correctly in the oil and gas industry. Starting with basic terms, codes and basis for selection, the book focuses on each piece of equipment, such as pumps, towers, underground piping, pipe sizes and supports, then goes on to cover piping stress analysis and the daily needed calculations to use on the job. Delivers a practical guide to pipe supports, structures and hangers available in one go-to source Includes information on stress analysis basics, quick checks, pipe sizing and pressure drop Ensures compliance with the latest piping and plant layout codes and complies with worldwide risk management legislation and HSE Focuses on each piece of equipment, such as pumps, towers, underground piping, pipe sizes and supports Covers piping stress analysis and the daily needed calculations to use on the job

**Enhancing the Community College Pathway to Engineering Careers** National Research Council,National Academy of Engineering,Policy and Global Affairs,Board on Higher Education and Workforce,Committee on Engineering Education,Committee on Enhancing the Community College Pathway to Engineering Careers.2006-01-01 Community colleges play an important role in starting students on the road to engineering careers, but students often face obstacles in transferring to four-year educational institutions to continue their education. Enhancing the Community College Pathway to Engineering Careers, a new book from the National Academy of Engineering and the National Research Council, discusses ways to improve the transfer experience for students at community colleges and offers strategies to enhance partnerships between those colleges and four-year engineering schools to help students transfer more smoothly. In particular, the book focuses on challenges and opportunities for improving transfer between community colleges and four-year educational institutions, recruitment and retention of students interested in engineering, the curricular content and quality of engineering programs, opportunities for community colleges to increase diversity in the engineering workforce, and a review of sources of information on community college and transfer students. It includes a number of current policies, practices, and programs involving community college&four-year institution

partnerships.

**Engineering Graduate Education and Research** National Research Council,Division on Engineering and Physical Sciences,Commission on Engineering and Technical Systems,Committee on the Education and Utilization of the Engineer,Subcommittee on Engineering Educational Systems,Panel on Engineering Graduate Education and Research.1985-01-01 The current state of engineering graduate study in the United States, its future, and its relationship to research are examined in this report of the National Research Council Committee on the Education and Utilization of the Engineer. The study focuses principally on increasing the supply of highly qualified doctoral recipients who are United States citizens particularly with respect to academic employment. It also gives attention to the importance of master's level work and to the need for access to part-time programs for engineers who are employed full time. Report sections include: (1) an executive summary; (2) the background (reviewing previous reports and studies in engineering education); (3) supply and demand (providing data on the supply of Ph.D.s and recommendations for increasing the supply); (4) women and minorities in engineering (examining representation patterns); (5) master's degree (presenting findings and recommendations); (6) doctor's degree (with findings and recommendations); (7) nontraditional graduate programs (analyzing existing approaches); (8) engineering faculty (addressing needs for faculty development); and (9) university-industry interactions (discussing conflicting and complementary interests). A list of 66 reference notes is included. (ML)
