ACTEX SOA Exam SRM Runhuan Feng, Daniel Linders, Ambrose Lo. 2018

Fundamentals of General Insurance Actuarial Analysis, Second Edition .2021-05 This text introduces the commonly used, basic approaches for reserving and ratemaking in General Insurance. It can be viewed as the next step in a progression from the mathematical content of the preliminary examinations to the mixture of theory and practice in the Fundamentals of Actuarial Practice Course to a practice-oriented approach. Professionalism requirements are interspersed throughout - setting a context for the work that actuaries perform. A very practical approach to education is given through varied examples that are linked from one chapter to another, and from one part of the textbook to another. The examples encountered in one chapter for four fictitious insurers (Auto Insurer, Dental Insurer, Collision Insurer, and Homeowners Insurer) continue in later chapters, as well as in the appendices. Detailed examples are also provided for two self-insured organizations, a captive insurer and a self-insurance pool. These examples demonstrate how traditional actuarial approaches can be applied to self-insurers, a topic not typically addressed in actuarial educational material.

**Lessons from a Gentle Life** Janis Gonzales.2019-10 At its most fundamental level, this is a story of a child's life and death, and a mother's subsequent struggle to find meaning again and to live an examined life. But this is much more than another personal memoir; it is a heartfelt, incisive, sometimes painful and often funny description of the way in which a mother's life was transformed by the lessons she learned from her young daughter, lessons that enabled her to become resilient and, in time, to fully live, and even find joy, after a devastating loss. From her unique perspective as a physician, mother, spiritual seeker, and writer, Dr. Gonzales uses the story of her daughter's life as a springboard to discuss such broad-ranging topics as the practice of medicine, prenatal testing, the power of prayer, the search for guidance, and the need for connection, giving us a profoundly moving look into both the depths of grief and the possibilities of hope. She shows us how to help someone who is grieving, and how we can go on and find healing in the face of devastating loss. Through it all runs a bond of pure love between a mother and a daughter, a love so powerful it goes on, even after death. This book is a gift to anyone who has suffered from an illness, anyone who has grieved a painful loss, and anyone who has been forced to realize that life doesn't happen according to plan.

*Introductory Time Series with R* Paul S.P. Cowpertwait, Andrew V. Metcalfe. 2009-05-28 This book gives you a step-by-step introduction to analysing time series using the open source software R. Each time series model is motivated with practical applications, and is defined in mathematical notation. Once the model has been introduced it is used to generate synthetic data, using R code, and these generated data are then used to estimate its parameters. This sequence enhances understanding of both the time series model and the R function used to fit the model to data. Finally, the model is used to analyse observed data taken from a practical application. By using R, the whole procedure can be reproduced by the reader. All the data sets used in the book are available on the website <http://staff.elena.aut.ac.nz/Paul-Cowpertwait/ts/>. The book is written for undergraduate students of mathematics, economics, business and finance, geography, engineering and related disciplines, and postgraduate students who may need to analyse time series as part of their taught programme or their research.
