*Natural and Artificial Rockslide Dams* Stephen G. Evans,Reginald L. Hermanns,Alexander Strom,Gabriele Scarascia-Mugnozza.2011-08-28 In the last one hundred years, a number of catastrophic events associated with rockslide dam formation and failure have occurred in the mountain regions of the world. This book presents a global view of the formation, characteristics and behaviour of natural and artificial rockslide dams. Chapters include a comprehensive state-of-the-art review of our global understanding natural and artificial rockslide dams, overviews of approaches to rockslide dam risk mitigation, regional studies of rockslide dams in India, Nepal, China, Pakistan, New Zealand, and Argentina. Rockslide dams associated with large-scale instability of volcanoes are also examined. Detailed case histories of well-known historic and prehistoric rockslide dams provide examples of investigations of rockslide dam behaviour, stability, and characteristics. The formation and behaviour of rockslide-dammed lakes (Quake Lakes) formed during the 2008 Wenchuan Earthquake, China are also comprehensively summarised. The formation, sedimentology and stability of rockslide dams is examined in several analytical papers. An analysis of break-out floods from volcanogenic lakes and hydrological methods of estimating break-out flood magnitude and behavior are reviewed. The use of remote sensing data in rockslide-dammed lake characterisation is explored and a new approach to the classification of rockslide dams is introduced. Finally, a unique section of the book summarises Russian and Kyrgyz experience with blast-fill dam construction in two papers by leading authorities on the technology. The volume contains 24 papers by 50 authors from 16 countries including most of the recognised world authorities on the subject.

Features of Common Sense Geography Klaus Geus,Martin Thiering.2014 The contributions in this volume combine fundamental questions of common sense geography with case studies of ancient geographical texts. The book bridges synchronic cognitive linguistic and cognitive psychological approaches to the ancient texts with a diachronic perspective. The mental modeling of common sense geography is a fruitful theoretical approach, to gain deeper insights in universal and cultural-specific mnemonic representational systems on the one hand, and to enhance our understanding of ancient geography on the other. (Series: Ancient Culture and History / Antike Kultur und Geschichte - Vol. 16)

*Archaeology, Ideology and Society* Heinrich Härke.2002 This volume explores the relationship between archaeology, politics and society in Germany from the later 19th to the end of the 20th century. The contributions discuss key aspects of this relationship in their historical context, beginning with the triumph of national archaeology over universalist anthropology, continuing with the exploitation of archaeology by the Nazi and Communist regimes, the widespread collaboration by archaeologists, and the political and intellectual aftermath of these two episodes. Other contributions raise no less important questions about the role of archaeology in democratic society, by exploring issues such as university teaching, public attitudes, gender, and research abroad. Contributors from outside Germany put this experience into a contemporary, European and international context.

**Stratigraphy** Jacques Rey,Simone Galeotti,Comité français de stratigraphie.2008 This book, written by 33 stratigraphic experts, presents various processes available which will enable the location in time of all rock types: sedimentary, metamorphic, plutonic, and eruptive, whether they are in outcrop or at subsurface. The terminology and the appropriate practices for each method are presented in separate chapters and illustrated with concrete examples. The order of the chapters is modeled on the progression of the stratigraphic process, from the descriptive to the interpretative,

from the methods of the geometric stratigraphy (lithostratigraphy and genetic stratigraphy, chemostratigraphy, magnetostratigraphy) to the chronological stratigraphy (biostratigraphy), followed by the chronometric stratigraphy (isotopic geochronology). The final two chapters are dedicated to chronostratigraphic units and correlations which combine the contributions of various methods and to the presentation of the 2007 version of the Geological Time Scale. The definitions of stratigraphic terms can be found in a glossary at the end of the work. The book is addressed to all professional geologists, from the industrial sector as well as those in universities, including teachers and researchers who would like to deepen their knowledge of the vocabulary, the concepts, the methods and the practical applications of different approaches of stratigraphy, a reference discipline for the entirety of the geological sciences.
