International Maritime Organization.2012 This publication, prepared by the OPRC-HNS Technical Group and approved by IMO's Marine Environmental Protection Committee, provides guidance on the establishment of an incident management system (IMS) for marine pollution incidents. An established IMS provides for the safe, effective and efficient management and deployment of resources for all types of emergency incidents. It is essential for effective pollution incident management, providing a clear command structure and well-defined roles and responsibilities within an optimal span-of-control. The IMS is intended to be staffed and operated by qualified personnel from any agency and is scalable so that it can adapt organizationally based on the needs of the incident. This Guidance document would ideally be used during the contingency planning process in conjunction with the IMO Manual on Oil Pollution, Section II - Contingency Planning and Section IV - Combating Oil Spills.

**Conceptual and Contextual Perspectives on the Modern Law of Treaties** Michael J. Bowman,Dino Kritsiotis.2018-10-31 In recent years there has been a flourishing body of work on the Law of Treaties, crucial for all fields within international law. However, scholarship on modern treaty law falls into two distinct strands which have not previously been effectively synthesized. One concerns the investigation of concepts which are fundamental to or inherent in the law of treaties generally - such as consent, object and purpose, breach of obligation and provisional application - while the other focuses upon the application of treaties and of treaty law in particular substantive (e.g. human rights, international humanitarian law, investment protection, environmental regulation) or institutional contexts (including the Security Council, the World Health Organization, the International Labour Organization and the World Trade Organization). This volume represents the culmination of a series of collaborative explorations by leading experts into the operation, development and effectiveness of the modern law of treaties, as viewed through these contrasting perspectives.

*Condition Assessment Scheme* International Maritime Organization.2005 The Condition Assessment Scheme (CAS) for oil tankers was adopted in 2001 and is applicable to all single-hull tankers of 15 years or older. Although the CAS does not specify structural standards in excess of the provisions of other IMO conventions, codes and recommendations, its requirements stipulate more stringent and transparent verification of the reported structural condition of the ship and that documentary and survey procedures have been properly carried out and completed. The Scheme requires that compliance with the CAS is assessed during the Enhanced Survey Program of Inspections concurrent with intermediate or renewal surveys currently required by resolution A.744(18), as amended.--Publisher's description.

In addition, the Legal Committee developed conventions relating to protection against pollution incidents, empowering coastal States to intervene on the high seas and determining uniform international rules regarding salvage operations. These conventions are closely linked to the liability and compensation regime and have therefore also been included in this publication. This publication has been developed to assist Member States with the effective and uniform implementation of IMO's liability and compensation regime. It provides a practical and comprehensive reference book for administrations, non-governmental organizations and private companies alike.
