**One Hundred Twenty-One Days** Michèle Audin.2016-04-25 Audin plays with codes, numbers and dates to create a fascinating and unsettling story.—*Le Temps* This debut novel by mathematician and Oulipo member Michèle Audin retraces the lives of French mathematicians over several generations through World Wars I and II. The narrative oscillates stylistically from chapter to chapter—at times a novel, fable, historical research, or a diary—locking and unlocking codes, culminating in a captivating, original reading experience. Michèle Audin is the author of several works of mathematical theory and history and also published a work on her anticolonialist father's torture, disappearance, and execution by the French during the Battle of Algiers.

**The Rejection of Consequentialism** Samuel Scheffler.1994-08-11 In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

**Marquesan** Gabriele H. Cablitz.2006-01-01 This volume investigates the linguistic and semantic encodings and conceptions of space in the East-Polynesian language Marquesan by focusing on the great variety of language- and culture-specific ways of referring to space, thus documenting an essential part of human behaviour and everyday communication in a South Pacific island population. On the basis of a large corpus of both natural and elicited spoken language data the morphosyntactic and semantic properties of all relevant lexical and grammatical units and constructions used for spatial reference are analysed in detail. Remarkable for this language is the fact that a particular kind of spatial orientation system based on local landmarks of the environment - a so-called 'absolute system' - is used for spatial description even on a micro-level or so-called 'table-top' space. *Marquesan - A Grammar of Space* is the first comprehensive description and in-depth study of spatial language to be found in an Austronesian language. Apart from examining the complex sociolinguistic situation, the degree of language endangerment in the bilingual speech community and the resulting rapid linguistic change in spatial language use, the book also offers a detailed description of the theoretical background of 'language and space' research and the linguistic variability to be found across languages. Moreover, the volume contains an extensive grammatical sketch of Marquesan which complements the language description of the specific domain space in a useful way providing the reader with general insights into one of the not well documented Oceanic languages. The volume addresses linguists, psycholinguists, anthropologists, fieldworking linguists, and especially Oceanists and Austronesianists. Moreover, it provides important insights for researchers from other disciplines that are interested in the study of space.

**Cataclysms** Laurent Testot.2020-11-09 Humanity is by many measures the biggest success story in the animal kingdom; but what are the costs of this triumph? Over its three million years of existence, the human species has continuously modified nature and drained its resources. In *Cataclysms*, Laurent Testot provides the full tally, offering a comprehensive environmental history of humanity's unmatched and perhaps irreversible influence on the world. Testot explores the interconnected histories of human evolution and planetary deterioration, arguing that our development from naked apes to *Homo sapiens* has entailed wide-scale environmental harm. Testot makes the case that humans have usually been catastrophic for the planet, "hyperpredators" responsible for mass extinctions, deforestation, global warming, ocean acidification, and unchecked pollution, as well as the slaughter of our own species. Organized chronologically around seven technological revolutions, *Cataclysms* unspools the intertwined saga of humanity and our environment, from our shy beginnings in Africa to today's domination of the planet, revealing how we have blown past any limits along the way—whether by exploding our own population numbers, domesticating countless other species, or harnessing energy from fossils. Testot's book, while sweeping, is light and approachable, telling the stories—sometimes rambunctious, sometimes appalling—of how a glorified monkey transformed its own environment beyond all recognition. In order to begin reversing our environmental disaster, we must have a better understanding of our own past and the incalculable environmental costs incurred at every stage of human innovation. *Cataclysms* offers that understanding and the hope that we can now begin to reform our relationship to the Earth.

**Total Jazz** Blutch.2018-02-14 Blutch riffs on two quintessentially American art forms in this collection of jazz-themed comics. In this freewheeling collection of short stories and vignettes, the famed French cartoonist examines not only the music, but the nature of the jazz sub-culture. The grumpy festival goer, the curmudgeonly collector, and many other fan "types" are the targets of his unerring gimlet eye. Drawn in a range of styles as improvisational as Coltrane and Mingus — everything from loose linework to tight pen and ink to gestural pencils — Blutch captures the excitement of live performance, the lovelorn, and the Great Jazz Detective, who is out but not down.

A world where everything is desolation and uncertainties. A world where Vuzz can ultimately only count on himself. Which suits him just fine... Historical Atlases Walter Goffart.2011-04-15 Today we can walk into any well-stocked bookstore or library and find an array of historical atlases. The first thorough review of the source material, *Historical Atlases* traces how these collections of maps for history—maps whose sole purpose was to illustrate some historical moment or scene—came into being. Beginning in the sixteenth century, and continuing down to the late nineteenth, Walter Goffart discusses milestones in the origins of historical atlases as well as individual maps illustrating historical events in alternating, paired chapters. He focuses on maps of the medieval period because the development of maps for history hinged particularly on portrayals of this segment of the postclassical, modern past. Goffart concludes the book with a detailed catalogue of more than 700 historical maps and atlases produced from 1570 to 1870. *Historical Atlases* will immediately take its place as the single most important reference on its subject. Historians of cartography, medievalists, and anyone seriously interested in the role of maps in portraying history will find it invaluable.
