Deep Tissue Massage, Revised Edition Art Riggs.2007-06-05

Featuring more than 250 photographs and 50 anatomical drawings, this revised edition of Deep Tissue Massage is the standard guide to the essentials of touch, biomechanics, and positioning options for a multitude of strategies to treat all major conditions encountered in a bodywork practice. The book is divided into three sections. "Fundamentals" covers basic skills of palpation, explaining the deeper layers of the body and presenting detailed instruction on working with these layers to release tension. This section gives clear information on the proper use of knuckles, fist, forearms, and elbows in preventing injury to the therapist. "Strategies" offers more precise protocols and treatment plans for the entire body with emphasis on client positioning options to stretch muscles rather than just kneading tissues. "Caveats" details areas in which the practitioner needs to exercise caution. Deep Tissue Massage presents a wealth of information in a way the therapist can immediately utilize. This

Personality Type: An Owner's Manual Lenore

Thomson.1998-10-27 Drawing from Jungian psychology and popular culture, this detailed guide to personality types will help you develop a deeper, more meaningful sense of your truest self For Jung, knowing your type was essential to understanding yourself: a way to measure personal growth and change. But his ideas have been applied largely in the areas of career and marital counseling, so type has come to seem predictive: a way to determine your job skills and social abilities. This book reclaims type as a way to talk about people's inner potential and the choices they make in order to honor it. Using everyday examples from popular culture—films, Star Trek, soap operas, comic strips—it describes the sixteen basic ways people come to terms with their gifts and values. In this book you will find tools to understand: • How your personality takes shape • How your type reflects not only your current priorities, but your hidden potential

Vertebrate Embryology Richard M. Eakin.1978-03-14 The real Hans Spemann, German embryologist (1869-1941), developed a concept of embryonic induction through his experiments on early amphibian embryos which demonstrated neural induction by the primary organizer and evocation of the lens by the optic vesicle. For his discovery of the "organizer" he was awarded the Nobel Peace in Physiology and Medicine in 1935, while he was Professor of Zoology at Freiburg, Germany. In the twenties and early thirties Spemann's laboratory was a mecca for students and investigators entering the new field of experimental embryology.
