Brown Skins, White Coats Projit Bihari Mukharji.2023-02-17 A unique narrative structure brings the history of race science in mid-twentieth century India to vivid life. Recent years have seen an explosion in studies of race science in the twentieth and twenty-first centuries, but the vast majority have remained focused either on Europe or North America and Australia. In this stirring history, Projit Bihari Mukharji shows that India appropriated and repurposed race science to its own ends and argues that these appropriations need to be understood within the national and regional contexts of postcolonial nation-making--not merely as footnotes to a European or Australo-American history of normal science. The book is constructed with seven factual chapters operating at distinct levels--the conceptual, practical, and cosmological--and eight fictive interchapters. Drawing principally on one work of fiction published in 1935 and supplemented by other fictional works written by the same author, the interchapters tease out the full implications of racial research in India with fiction. The narrative interchapters develop as a series of epistolary exchanges between the Bengali author Hemendrakumar Roy (1888-1963) and the main protagonist of his dystopian science fiction novel about race, race science, racial improvement, and dehumanization. In this way, Mukharji fills out the historical moment in which the factual narrative unfolded, vividly revealing its moral, affective, political, and intellectual fissures.

Synthetic Biology A. Balmer, K. Bulpin, S. Molyneux-Hodgson. 2016-06-01 This book explores the emergence of a new scientific field, synthetic biology, and the many bold promises its proponents have made to change the future of science, industry, humanity and the global environment. It explores how people, including academics, students, industrialists and governance actors, tried to change their practices to bring engineering and biology together, and to realise such promises from within their everyday lives. It focuses on an ethnographic case study of an academic project that aimed to demonstrate the field's promise for solving water industry problems, from leaky pipes to climate change. In doing so, the book weaves together stories of barriers, bacteria and bodies, examining how they were entangled as people tried to make connections between academia and industry. It also reflects on the authors' attempts to work collaboratively with natural scientists and engineers, reflecting on current debates about the role of sociology in such interdisciplinary projects. The book contributes to contemporary studies of science and technology by highlighting issues such as ontology, practices, failure and time.

Putting a Name to It Annemarie Goldstein Jutel. 2014-12 Diagnosis is central to medicine. It creates social order, explains illness, identifies treatments, and predicts outcomes. Using concepts of medical sociology, Annemarie Goldstein Jutel sheds light on current knowledge about the components of diagnosis to outline how a sociology of diagnosis would function. She situates it within the broader discipline, lays out the directions it should explore, and discusses how the classification of illness and framing of diagnosis relate to social status and order. Jutel explains why this matters not just to doctor-patient relationships but also to the entire medical system.--Back cover.

Biomedicine in an Unstable Place Alice Street. 2014-10-24 Biomedicine in an Unstable Place is the

story of people's struggle to make biomedicine work in a public hospital in Papua New Guinea. It is a story encompassing the history of hospital infrastructures as sites of colonial and postcolonial governance, the simultaneous production of Papua New Guinea as a site of global medical research and public health, and people's encounters with urban institutions and biomedical technologies. In Papua New Guinea, a century of state building has weakened already inadequate colonial infrastructures, and people experience the hospital as a space of institutional, medical, and ontological instability. In the hospital's clinics, biomedical practitioners struggle amid severe resource shortages to make the diseased body visible and knowable to the clinical gaze. That struggle is entangled with attempts by doctors, nurses, and patients to make themselves visible to external others—to kin, clinical experts, global scientists, politicians, and international development workers—as socially recognizable and valuable persons. Here hospital infrastructures emerge as relational technologies that are fundamentally fragile but also offer crucial opportunities for making people visible and knowable in new, unpredictable, and powerful ways.

The Routledge Handbook of Language and Science David R. Gruber, Lynda C. Olman. 2019-11-28 The Routledge Handbook of Language and Science provides a state-of-the-art volume on the language of scientific processes and communications. This book offers comprehensive coverage of socio-cultural approaches to science, as well as analysing new theoretical developments and incorporating discussions about future directions within the field. Featuring original contributions from an international range of renowned scholars, as well as academics at the forefront of innovative research, this handbook: identifies common objects of inquiry across the areas of rhetoric, sociolinguistics, communication studies, science and technology studies, and public understanding of science; covers the four key themes of power, pedagogy, public engagement, and materiality in

relation to the study of scientific language and its development; uses qualitative and quantitative approaches to demonstrate how humanities and social science scholars can go about studying science; details the meaning and purpose of socio-cultural approaches to science, including the impact of new media technologies; analyses the history of the field and how it positions itself in relation to other areas of study. Ushering the study of language and science toward a more interdisciplinary, diverse, communal and ecological future, *The Routledge Handbook of Language and Science* is an essential reference for anyone with an interest in this area.

After Method John Law.2004-08-12 John Law argues that methods don't just describe social realities but are also involved in creating them. The implications of this argument are highly significant. If this is the case, methods are always political, and it raises the question of what kinds of social realities we want to create. Most current methods look for clarity and precision. It is usually said that only poor research produces messy findings, and the idea that things in the world might be fluid, elusive, or multiple is unthinkable. Law's startling argument is that this is wrong and it is time for a new approach. Many realities, he says, are vague and ephemeral. If methods want to know and help to shape the world, then they need to reinvent themselves and their politics to deal with mess. That is the challenge. Nothing less will do.

Multiple Nature-Cultures, Diverse Anthropologies Casper Bruun Jensen,Atsuro Morita.2019-08-16 Over time, the role of nature in anthropology has evolved from being a mere backdrop for social and cultural diversity to being viewed as an integral part of the ontological entanglement of human and nonhuman agents. This transformation of the role of nature offers important insight into the relationships between diverse anthropological traditions. By highlighting natural-cultural worlds alongside these traditions, *Multiple Nature-Cultures, Diverse Anthropologies*

explores the potential for creating more sophisticated conjunctions of anthropological knowledge and practice.

Edinburgh Companion to the Critical Medical Humanities Anne Whitehead.2016-06-14 In this landmark Companion, expert contributors from around the world map out the field of the critical medical humanities. This is the first volume to introduce comprehensively the ways in which interdisciplinary thinking across the humanities and social sciences might contribute to, critique and develop medical understanding of the human individually and collectively. The thirty-six newly commissioned chapters range widely within and across disciplinary fields, always alert to the intersections between medicine, as broadly defined, and critical thinking. Each chapter offers suggestions for further reading on the issues raised, and each section concludes with an Afterword, written by a leading critic, outlining future possibilities for cutting-edge work in this area. Topics covered in this volume include: the affective body, biomedicine, blindness, breath, disability, early modern medical practice, fatness, the genome, language, madness, narrative, race, systems biology, performance, the postcolonial, public health, touch, twins, voice and wonder. Together the chapters generate a body of new knowledge and make a decisive intervention into how health, medicine and clinical care might address questions of individual, subjective and embodied experience.

The World Multiple Keiichi Omura, Grant Jun Otsuki, Shiho Satsuka, Atsuro Morita.2018-11-16 *The World Multiple*, as a collection, is an ambitious ethnographic experiment in understanding how the world is experienced and generated in multiple ways through people's everyday practices. Against the dominant assumption that the world is a single universal reality that can only be known by modern expert science, this book argues that worlds are worlded—they are socially and materially crafted in multiple forms in everyday practices involving humans, landscapes, animals, plants, fungi,

rocks, and other beings. These practices do not converge to a singular knowledge of the world, but generate a world multiple—a world that is more than one integrated whole, yet less than many fragmented parts. The book brings together authors from Europe, Japan, and North America, in conversation with ethnographic material from Africa, the Americas, and Asia, in order to explore the possibilities of the world multiple to reveal new ways to intervene in the legacies of colonialism, imperialism, and capitalism that inflict damage on humans and nonhumans. The contributors show how the world is formed through interactions among techno-scientific, vernacular, local, and indigenous practices, and examine the new forms of politics that emerge out of them. Engaged with recent anthropological discussions of ontologies, the Anthropocene, and multi-species ethnography, the book addresses the multidimensional realities of people's lives and the quotidian politics they entail.

Health Promotion and Prevention Programmes in Practice Thomas Mathar, Yvonne J.F.M.

Jansen.2015-07-31 The shift to prevention and health promotion is an example of how policy makers aim to rationalise and organise both health systems and patients' health practices. By applying a perspective from empirical science & technology studies (STS), based on qualitative research methods, the chapters of this book present a view behind the scenes and zoom into the micropolitics of prevention and health promotion. They analyse how patients are framed as being »at risk«, how preventative regimes shape medical practices, and what its practical consequences are in patients' everyday lives. This makes the insights of this book relevant for prevention and health promotion practitioners, public health policy-makers and researchers.

Medicine in the Meantime Ramah McKay.2017-01-12 In Mozambique, where more than half of the national health care budget comes from foreign donors, NGOs and global health research projects

have facilitated a dramatic expansion of medical services. At once temporary and unfolding over decades, these projects also enact deeply divergent understandings of what care means and who does it. In *Medicine in the Meantime*, Ramah McKay follows two medical projects in Mozambique through the day-to-day lives of patients and health care providers, showing how transnational medical resources and infrastructures give rise to diverse possibilities for work and care amid constraint. Paying careful attention to the specific postcolonial and postsocialist context of Mozambique, McKay considers how the presence of NGOs and the governing logics of the global health economy have transformed the relations—between and within bodies, medical technologies, friends, kin, and organizations—that care requires and how such transformations pose new challenges for ethnographic analysis and critique.

Eating in Theory Annemarie Mol.2021-03-01 As we taste, chew, swallow, digest, and excrete, our foods transform us, while our eating, in its turn, affects the wider earthly environment. In *Eating in Theory* Annemarie Mol takes inspiration from these transformative entanglements to rethink what it is to be human. Drawing on fieldwork at food conferences, research labs, health care facilities, restaurants, and her own kitchen table, Mol reassesses the work of authors such as Hannah Arendt, Maurice Merleau-Ponty, Hans Jonas, and Emmanuel Levinas. They celebrated the allegedly unique capability of humans to rise above their immediate bodily needs. Mol, by contrast, appreciates that as humans we share our fleshy substance with other living beings, whom we cultivate, cut into pieces, transport, prepare, and incorporate—and to whom we leave our excesses. This has far-reaching philosophical consequences. Taking human eating seriously suggests a reappraisal of being as transformative, knowing as entangling, doing as dispersed, and relating as a matter of inescapable dependence.

The Logic of Care Annemarie Mol.2008-05-24 ****Shortlisted for the BSA Sociology of Health and Illness Book Prize 2010**** What is good care? In this innovative and compelling book, Annemarie Mol argues that good care has little to do with 'patient choice' and, therefore, creating more opportunities for patient choice will not improve health care. Although it is possible to treat people who seek professional help as customers or citizens, Mol argues that this undermines ways of thinking and acting crucial to health care. Illustrating the discussion with examples from diabetes clinics and diabetes self care, the book presents the 'logic of care' in a step by step contrast with the 'logic of choice'. She concludes that good care is not a matter of making well argued individual choices but is something that grows out of collaborative and continuing attempts to attune knowledge and technologies to diseased bodies and complex lives. Mol does not criticise the practices she encountered in her field work as messy or ad hoc, but makes explicit what it is that motivates them: an intriguing combination of adaptability and perseverance. *The Logic of Care: Health and the problem of patient choice* is crucial reading for all those interested in the theory and practice of care, including sociologists, anthropologists and health care professionals. It will also speak to policymakers and become a valuable source of inspiration for patient activists.

The Medicalization of Society Peter Conrad.2007-06-11 Over the past half-century, the social terrain of health and illness has been transformed. What were once considered normal human events and common human problems—birth, aging, menopause, alcoholism, and obesity—are now viewed as medical conditions. For better or worse, medicine increasingly permeates aspects of daily life.

Building on more than three decades of research, Peter Conrad explores the changing forces behind this trend with case studies of short stature, social anxiety, male menopause, erectile dysfunction, adult ADHD, and sexual orientation. He examines the emergence of and changes in medicalization, the consequences of the expanding medical domain, and the implications for health and society. He finds in recent developments—such as the growing number of possible diagnoses and biomedical enhancements—the future direction of medicalization. Conrad contends that the impact of medical professionals on medicalization has diminished. Instead, the pharmaceutical and biotechnical industries, insurance companies and HMOs, and the patient as consumer have become the major forces promoting medicalization. This thought-provoking study offers valuable insight into not only how medicalization got to this point but also how it may continue to evolve.

The Birth of the Clinic Michel Foucault.2002-11-01 Foucault's classic study of the history of medicine.

Punk Sociology D. Beer.2014-01-06 This book explores the possibility of drawing upon a punk ethos to inspire and invigorate sociology. It uses punk to think creatively about what sociology is and how it might be conducted and aims to fire the sociological imaginations of sociologists at any stage of their careers, from new students to established professors.

The Body Multiple Annemarie Mol.2002-12-27 The Body Multiple is an extraordinary ethnography of an ordinary disease. Drawing on fieldwork in a Dutch university hospital, Annemarie Mol looks at the day-to-day diagnosis and treatment of atherosclerosis. A patient information leaflet might describe atherosclerosis as the gradual obstruction of the arteries, but in hospital practice this one medical condition appears to be many other things. From one moment, place, apparatus, specialty, or treatment, to the next, a slightly different “atherosclerosis” is being discussed, measured,

observed, or stripped away. This multiplicity does not imply fragmentation; instead, the disease is made to cohere through a range of tactics including transporting forms and files, making images, holding case conferences, and conducting doctor-patient conversations. The *Body Multiple* juxtaposes two distinct texts. Alongside Mol's analysis of her ethnographic material—interviews with doctors and patients and observations of medical examinations, consultations, and operations—runs a parallel text in which she reflects on the relevant literature. Mol draws on medical anthropology, sociology, feminist theory, philosophy, and science and technology studies to reframe such issues as the disease-illness distinction, subject-object relations, boundaries, difference, situatedness, and ontology. In dialogue with one another, Mol's two texts meditate on the multiplicity of reality-in-practice. Presenting philosophical reflections on the body and medical practice through vivid storytelling, *The Body Multiple* will be important to those in medical anthropology, philosophy, and the social study of science, technology, and medicine.

digitalSTS Janet Vertesi, David Ribes. 2019-05-07 Scholars across the humanities, social sciences, and information sciences are grappling with how best to study virtual environments, use computational tools in their research, and engage audiences with their results. Classic work in science and technology studies (STS) has played a central role in how these fields analyze digital technologies, but many of its key examples do not speak to today's computational realities. This groundbreaking collection brings together a world-class group of contributors to refresh the canon for contemporary digital scholarship. In twenty-five pioneering and incisive essays, this unique digital field guide offers innovative new approaches to digital scholarship, the design of digital tools and objects, and the deployment of critically grounded technologies for analysis and discovery. Contributors cover a broad range of topics, including software development, hackathons, digitized

objects, diversity in the tech sector, and distributed scientific collaborations. They discuss methodological considerations of social networks and data analysis, design projects that can translate STS concepts into durable scientific work, and much more. Featuring a concise introduction by Janet Vertesi and David Ribes and accompanied by an interactive microsite, this book provides new perspectives on digital scholarship that will shape the agenda for tomorrow's generation of STS researchers and practitioners.

Differences in Medicine Marc Berg, Annemarie Mol. 1998 Western medicine is widely thought of as a coherent and unified field in which beliefs, definitions, and judgments are shared. This book debunks this myth with an interdisciplinary and intercultural collection of essays that reveals the significantly varied ways practitioners of conventional Western medicine handle bodies, study test results, configure statistics, and converse with patients.

The Educated Eye Nancy A. Anderson. 2012 The creation and processing of visual representations in the life sciences is a critical but often overlooked aspect of scientific pedagogy. *The Educated Eye* follows the nineteenth-century embrace of the visible in new spectatoria, or demonstration halls, through the twentieth-century cinematic explorations of microscopic realms and simulations of surgery in virtual reality. With essays on Doc Edgerton's stroboscopic techniques that froze time and Eames's visualization of scale in *Powers of Ten*, among others, contributors ask how we are taught to see the unseen.

Complexities John Law, Annemarie Mol. 2002-06-10 Although much recent social science and humanities work has been a revolt against simplification, this volume explores the contrast between simplicity and complexity to reveal that this dichotomy, itself, is too simplistic. John Law and Annemarie Mol have gathered a distinguished panel of contributors to offer—particularly within the

field of science studies—approaches to a theory of complexity, and at the same time a theoretical introduction to the topic. Indeed, they examine not only ways of relating to complexity but complexity in practice. Individual essays study complexity from a variety of perspectives, addressing market behavior, medical interventions, aeronautical design, the governing of supranational states, ecology, roadbuilding, meteorology, the science of complexity itself, and the psychology of childhood trauma. Other topics include complex wholes (holism) in the sciences, moral complexity in seemingly amoral endeavors, and issues relating to the protection of African elephants. With a focus on such concepts as multiplicity, partial connections, and ebbs and flows, the collection includes narratives from Kenya, Great Britain, Papua New Guinea, the Netherlands, France, and the meetings of the European Commission, written by anthropologists, economists, philosophers, psychologists, sociologists, and scholars of science, technology, and society. Care in Practice Annemarie Mol, Ingunn Moser, Jeannette Pols. 2015-02-28 In what way is »care« a matter of »tinkering«? Rather than presenting care as a (preferably »warm«) relation between human beings, the various contributions to the volume give the material world (usually cast as »cold«) a prominent place in their analysis. Thus, this book does not continue to oppose care and technology, but contributes to rethinking both in such a way that they can be analysed together. Technology is not cast as a functional tool, easy to control - it is shifting, changing, surprising and adaptable. In care practices all »things« are (and have to be) tinkered with persistently. Knowledge is fluid, too. Rather than a set of general rules, the knowledges (in the plural) relevant to care practices are as adaptable and in need of adaptation as the technologies, the bodies, the people, and

the daily lives involved.

Good Science Charis Thompson. 2013-12-20 An examination of a decade and a half of political controversy, ethical debate, and scientific progress in stem cell research. After a decade and a half, human pluripotent stem cell research has been normalized. There may be no consensus on the status of the embryo—only a tacit agreement to disagree—but the debate now takes place in a context in which human stem cell research and related technologies already exist. In this book, Charis Thompson investigates the evolution of the controversy over human pluripotent stem cell research in the United States and proposes a new ethical approach for “good science.” Thompson traces political, ethical, and scientific developments that came together in what she characterizes as a “procurial” framing of innovation, based on concern with procurement of pluripotent cells and cell lines, a pro-cures mandate, and a proliferation of bio-curatorial practices. Thompson describes what she calls the “ethical choreography” that allowed research to go on as the controversy continued. The intense ethical attention led to some important discoveries as scientists attempted to “invent around” ethical roadblocks. Some ethical concerns were highly legible; but others were hard to raise in the dominant procurial framing that allowed government funding for the practice of stem cell research to proceed despite controversy. Thompson broadens the debate to include such related topics as animal and human research subjecthood and altruism. Looking at fifteen years of stem cell debate and discoveries, Thompson argues that good science and good ethics are mutually reinforcing, rather than antithetical, in contemporary biomedicine.

Psychological Studies of Science and Technology Kieran C. O'Doherty, Lisa M. Osbeck, Ernst Schraube, Jeffery Yen. 2019-08-24 This book provides a significant contribution to scholarship on the psychology of science and the psychology of technology by showcasing a range of theory and

research distinguished as psychological studies of science and technology. Science and technology are central to almost all domains of human activity, for which reason they are the focus of subdisciplines such as philosophy of science, philosophy of technology, sociology of knowledge, and history of science and technology. To date, psychology has been marginal in this space and limited to relatively narrow epistemological orientations. By explicitly embracing pluralism and an international approach, this book offers new perspectives and directions for psychological contributions. The book brings together leading theorists and researchers from around the world and spans scholarship across a variety of traditions that include theoretical psychology, critical psychology, feminist psychology and social constructionist approaches. Following a historical and conceptual introduction, the collection is divided into three sections: Scoping a New Psychology of Science and Technology, Applying Psychological Concepts to the Study of Science and Technology and Critical Perspectives on Psychology as a Science. The book will interest interdisciplinary scholars who work in the space of Science and Technology Studies and psychologists interested in the diverse human aspects of science and technology.

Chinese Medicine in Contemporary China Volker Scheid.2002-05-22 As a traditional healing art that has established a contemporary global presence, Chinese medicine defies categories and raises many interesting questions. If Chinese medicine is traditional, why has it not disappeared with the rest of traditional Chinese society? If, as some claim, it is a science, what does that imply about what we call science? What is the secret of Chinese medicine's remarkable adaptability that has allowed it to prosper for more than 2,000 years? In Chinese Medicine in Contemporary China Volker Scheid presents an ethnography of Chinese medicine that seeks to answer these questions, but his ethnography is informed by some atypical approaches. Scheid, a medical anthropologist and

practitioner of Chinese medicine in practice since 1983, has produced an ethnography that accepts plurality as an intrinsic and nonreducible aspect of medical practice. It has been widely noted that a patient visiting ten different practitioners of Chinese medicine may receive ten different prescriptions for the same complaint, yet many of these various treatments may be effective. In attempting to illuminate the plurality in Chinese medical practice, Scheid redefines-and in some cases abandons-traditional anthropological concepts such as tradition, culture, and practice in favor of approaches from disciplines such as science and technology studies, social psychology, and Chinese philosophy. As a result, his book sheds light not only on Chinese medicine but also on the Western academic traditions used to examine it and presents us with new perspectives from which to deliberate the future of Chinese medicine in a global context. *Chinese Medicine in Contemporary China* is the product of two decades of research including numerous interviews and case studies. It will appeal to a western academic audience as well as practitioners of Chinese medicine and other interested medical professionals, including those from western biomedicine.

The Woman Beneath the Skin Barbara Duden.1991 Duden asserts that the most basic biological and medical terms that we use to describe our own bodies--male and female, healthy or sick--are cultural constructions. To illustrate this, she delves into records of an 18th-century German physician who documented the medical histories of 1,800 women of all ages and backgrounds, often in their own words.

Social Science Research Anol Bhattacharjee.2012-04-01 This book is designed to introduce doctoral and graduate students to the process of conducting scientific research in the social sciences, business, education, public health, and related disciplines. It is a one-stop, comprehensive, and compact source for foundational concepts in behavioral research, and can serve as a stand-alone

text or as a supplement to research readings in any doctoral seminar or research methods class. This book is currently used as a research text at universities on six continents and will shortly be available in nine different languages.

The Handbook of Science and Technology Studies, fourth edition Ulrike Felt, Rayvon Fouche, Clark A. Miller, Laurel Smith-Doerr. 2016-12-16 The fourth edition of an authoritative overview, with all new chapters that capture the state of the art in a rapidly growing field. Science and Technology Studies (STS) is a flourishing interdisciplinary field that examines the transformative power of science and technology to arrange and rearrange contemporary societies. The Handbook of Science and Technology Studies provides a comprehensive and authoritative overview of the field, reviewing current research and major theoretical and methodological approaches in a way that is accessible to both new and established scholars from a range of disciplines. This new edition, sponsored by the Society for Social Studies of Science, is the fourth in a series of volumes that have defined the field of STS. It features 36 chapters, each written for the fourth edition, that capture the state of the art in a rich and rapidly growing field. One especially notable development is the increasing integration of feminist, gender, and postcolonial studies into the body of STS knowledge. The book covers methods and participatory practices in STS research; mechanisms by which knowledge, people, and societies are coproduced; the design, construction, and use of material devices and infrastructures; the organization and governance of science; and STS and societal challenges including aging, agriculture, security, disasters, environmental justice, and climate change.

U-Healthcare Monitoring Systems Nilanjan Dey, Amira Ashour, Simon James Fong, Surekha Borra. 2018-09-17 *U-Healthcare Monitoring Systems: Volume One: Design and Applications* focuses

on designing efficient U-healthcare systems which require the integration and development of information technology service/facilities, wireless sensors technology, wireless communication tools, and localization techniques, along with health management monitoring, including increased commercialized service or trial services. These u-healthcare systems allow users to check and remotely manage the health conditions of their parents. Furthermore, context-aware service in u-healthcare systems includes a computer which provides an intelligent service based on the user's different conditions by outlining appropriate information relevant to the user's situation. This volume will help engineers design sensors, wireless systems and wireless communication embedded systems to provide an integrated u-healthcare monitoring system. This volume provides readers with a solid basis in the design and applications of u-healthcare monitoring systems. Communicating Science and Technology in Society Ana Delicado, Fabienne Crettaz Von Roten, Katarina Prpić. 2020-11-22 This volume addresses the engagement between science and society from multiple viewpoints. At a time when trust in experts is being questioned, misinformation is rife and scientific and technological development show growing social impact, the volume examines the challenges in involving the public in scientific debates and decisions. It takes into account societal needs and concerns in research, and analyses the interface between the roles of institutions and individuals. From environmental challenges to science communication, participatory

technological design to animal experimentation, and transdisciplinarity to norms and values in science, the volume brings together research on areas in which scientists and citizens interact, across diverse, often understudied, socio-cultural contexts in Europe. It encompasses the natural sciences, engineering and the social sciences, and the chapters follow diverse theoretical frameworks and methodologies, including both quantitative and qualitative approaches. This volume contributes not just to scholarly knowledge on the topic of science and society relations, but also provides useful information for students, policy makers, journalists, and STEM (science, technology, engineering and mathematics) researchers keen on engaging with their publics and conducting responsible research and innovation.

The Body in History John Robb, Oliver J. T. Harris. 2013-09-02 This book is a long-term history of how the human body has been understood in Europe from the Palaeolithic to the present day, focusing on specific moments of change. Developing a multi-scalar approach to the past, and drawing on the work of an interdisciplinary team of experts, the authors examine how the body has been treated in life, art and death for the last 40,000 years. Key case-study chapters examine Palaeolithic, Neolithic, Bronze Age, Classical, Medieval, Early Modern and Modern bodies. What emerges is not merely a history of different understandings of the body, but a history of the different human bodies that have existed. Furthermore, the book argues, these bodies are not merely the product of historical circumstance, but are themselves key elements in shaping the changes that have swept across Europe since the arrival of modern humans.

Sociology of Diagnosis PJ McGann, David Hutson, Barbara Katz Rothman. 2011-08-03 Offers an introduction to the sociology of diagnosis. This title presents articles that explore diagnosis as a process of definition that includes: labeling dynamics between diagnoser and diagnosed; boundary

struggles between diverse constituents - both among medical practitioners and between medical authorities and others; and, more.

Sports-Related Concussions in Youth National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Sports-Related Concussions in Youth. 2014-02-04 In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. *Sports-Related Concussions in Youth: Improving the Science, Changing the Culture* reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. *Sports-Related Concussions in Youth* finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences

athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to *Sports-Related Concussions in Youth*, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

A Place for Science and Technology Studies Jane Calvert.2024-01-09 An exploration of science and technology studies in eight different places, and the possibilities that arise for observation, intervention, and collaboration. Where does science and technology studies (STS) belong? In *A Place for Science and Technology Studies*, Jane Calvert takes readers through eight different rooms—the laboratory, the conference room, the classroom, the coffee room, the art studio, the bioethics building, the policy room, and the ivory tower—investigating the possibilities and limitations of each for STS research. Drawing from over a decade of work in synthetic biology, Calvert explores three different orientations for STS—observation, intervention, and collaboration—to ask whether there is a place for STS, which, as an undisciplined field, often finds itself on the periphery of traditional institutions or dependent on more generously funded STEM disciplines. Using examples of failures and successes and tackling enduring concerns about the relations between social scientific

researchers and their fields of study, Calvert argues for an approach to STS that is collaborative yet allows for autonomy.

Strengthening Forensic Science in the United States National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community. 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators. *Picturing Personhood* Joseph Dumit. 2021-09-14 By showing us the human brain at work, PET

(positron emission tomography) scans are subtly--and sometimes not so subtly--transforming how we think about our minds. *Picturing Personhood* follows this remarkable and expensive technology from the laboratory into the world and back. It examines how PET scans are created and how they are being called on to answer myriad questions with far-reaching implications: Is depression an observable brain disease? Are criminals insane? Do men and women think differently? Is rationality a function of the brain? Based on interviews, media analysis, and participant observation at research labs and conferences, Joseph Dumit analyzes how assumptions designed into and read out of the experimental process reinforce specific notions about human nature. Such assumptions can enter the process at any turn, from selecting subjects and mathematical models to deciding which images to publish and how to color them. Once they leave the laboratory, PET scans shape social debates, influence courtroom outcomes, and have positive and negative consequences for people suffering mental illness. Dumit follows this complex story, demonstrating how brain scans, as scientific objects, contribute to our increasing social dependence on scientific authority. The first book to examine the cultural ramifications of brain-imaging technology, *Picturing Personhood* is an unprecedented study that will influence both cultural studies and the growing field of science and technology studies.

Fundamentals of Clinical Data Science Pieter Kubben, Michel Dumontier, Andre Dekker. 2018-12-21 This open access book comprehensively covers the fundamentals of clinical data science, focusing on data collection, modelling and clinical applications. Topics covered in the first section on data collection include: data sources, data at scale (big data), data stewardship (FAIR data) and related privacy concerns. Aspects of predictive modelling using techniques such as classification, regression or clustering, and prediction model validation will be covered in the second

section. The third section covers aspects of (mobile) clinical decision support systems, operational excellence and value-based healthcare. Fundamentals of Clinical Data Science is an essential resource for healthcare professionals and IT consultants intending to develop and refine their skills in personalized medicine, using solutions based on large datasets from electronic health records or telemonitoring programmes. The book's promise is "no math, no code" and will explain the topics in a style that is optimized for a healthcare audience.

Rethinking Causality, Complexity and Evidence for the Unique Patient Rani Lill

Anjum, Samantha Copeland, Elena Rocca. 2020-06-02 This open access book is a unique resource for health professionals who are interested in understanding the philosophical foundations of their daily practice. It provides tools for untangling the motivations and rationality behind the way medicine and healthcare is studied, evaluated and practiced. In particular, it illustrates the impact that thinking about causation, complexity and evidence has on the clinical encounter. The book shows how medicine is grounded in philosophical assumptions that could at least be challenged. By engaging with ideas that have shaped the medical profession, clinicians are empowered to actively take part in setting the premises for their own practice and knowledge development. Written in an engaging and accessible style, with contributions from experienced clinicians, this book presents a new philosophical framework that takes causal complexity, individual variation and medical uniqueness as default expectations for health and illness.

Giving Bodies Back to Data Silvia Casini. 2021-08-03 An examination of the bodily, situated aspects of data-visualization work, looking at visualization practices around the development of MRI technology. Our bodies are scanned, probed, imaged, sampled, and transformed into data by clinicians and technologists. In this book, Silvia Casini reveals the affective relations and materiality

that turn data into image--and in so doing, gives bodies back to data. Opening the black box of MRI technology, Casini examines the bodily, situated aspects of visualization practices around the development of this technology. Reframing existing narratives of biomedical innovation, she emphasizes the important but often overlooked roles played by aesthetics, affectivity, and craft practice in medical visualization. Combining history, theory, laboratory ethnography, archival research, and collaborative art-science, Casini retrieves the multiple presences and agencies of bodies in data visualization, mapping the traces of scientists' body work and embodied imagination. She presents an in-depth ethnographic study of MRI development at the University of Aberdeen's biomedical physics laboratory, from the construction of the first whole-body scanner for clinical purposes through the evolution of the FFC-MRI. Going beyond her original focus on MRI, she analyzes a selection of neuroscience- or biomedicine-inspired interventions by artists in media ranging from sculpture to virtual reality. Finally, she presents a methodology for designing and carrying out small-scale art-science projects, describing a collaboration that she herself arranged, highlighting the relational and aesthetic-laden character of data that are the product of craftsmanship and affective labor at the laboratory bench.
