Information Systems for the Non-Technical Manager provides an inside look at the principles that make information systems a field in its own right and invites students to apply these principles to all aspects of business management. The book presents an unfolding explanation of information systems through the lens of custom-designed conceptual models. The four distinct parts of the book invite the reader to consider the purpose of information systems. In the first part, students consider what questions are being asked that information systems can answer. In the second part, students break apart and examine each component of information systems piece by piece. In the third part, the pieces are joined together and presented as a cohesive whole. Finally, there is a practical section that includes interviews with current experts in the field, select case studies, and a historical survey that provides context for how modern information systems have developed over time. Presenting the reader with timeless principles that apply to real-world scenarios, regardless of discipline, Information Systems for the Non-Technical Manager is the ideal solution for survey courses for non-majors.

The Economics of Microfinance Beatriz Armendáriz de Aghion,Beatriz Armendáriz,Jonathan Morduch.2007 The microfinance revolution, begun with independent initiatives in Latin America and South Asia starting in the 1970s, has so far allowed 65 million poor people around the world to receive small loans without collateral, build up assets, and buy insurance. This comprehensive survey of microfinance seeks to bridge the gap in the existing literature on microfinance between academic economists and practitioners. Both authors have pursued the subject not only in academia but in the field; Beatriz Armendariz founded a microfinance bank in Chiapas, Mexico, and Jonathan Morduch has done fieldwork in Bangladesh, China, and Indonesia. The book provides an overview of microfinance by addressing a range of issues, including lessons from informal markets, savings and insurance, the role of women, the place of subsidies, impact measurement, and management incentives. It integrates theory with empirical data, citing studies from Asia, Africa, and Latin America and introducing ideas about asymmetric information, principal-agent theory, and household decision making in the context of microfinance.

Development Finance Institutions Mark Schreiner, Jacob Yaron. 2001-01-01 The purpose of the measurement of the social cost of subsidised development finance institutions (DFIs) is to see if the social benefit exceeds the social cost. In most cases, it is so expensive to measure social benefits that a full-blown social cost-benefit analysis cannot be done. The measurement of social costs, however, is not as expensive, and it can inform choices of how to spend public funds. This paper presents two measures of social cost. The first is the Subsidy Dependence Index (SDI) that can measure social cost in short time frames. The second measure is the net present cost of society (NPCS), which can measure social cost in any time frame. Both the SDI and the NPCS model shift the emphasis from prices paid to opportunity costs.

Investment Decisions and the Logic of Valuation Carlo Alberto Magni. 2020-02-11 This book presents a new approach to the valuation of capital asset investments and investment decision-making. Starting from simple premises and working logically through three basic elements (capital, income, and cash flow), it guides readers on an interdisciplinary journey through the subtleties of accounting and finance, explaining how to correctly measure a project's economic profitability and efficiency, how to assess the impact of investment policy and financing policy on shareholder value creation, and how to design reliable, transparent, and logically consistent financial models. The book adopts an innovative pedagogical approach, based on a newly developed accounting-and-finance-engineering system, to help readers gain a deeper understanding of the accounting and financial magnitudes, learn about new analytical tools, and develop the necessary skills to practically implement them. This diverse approach to capital budgeting allows a sophisticated economic analysis in both absolute terms (values) and relative terms (rates of return), and is applicable to a wide range of economic entities, including real assets and financial assets, engineering designs and manufacturing schemes, corporate-financed and project-financed transactions, privately-owned projects and public investments, individual projects and firms. As such, this book is a valuable resource for a broad audience, including scholars and researchers, industry practitioners, executives, and managers, as well as students of corporate finance, managerial finance, engineering economics, financial management, management accounting, operations research, and financial mathematics. It features more than 180 guided examples, 50 charts and figures and over 160 explanatory tables that help readers grasp the new concepts and tools. Each chapter starts with an abstract and a list of the skills readers can expect to gain, and concludes with a list of key points summarizing the content.
