**Statistical Methods for Plant Variety Evaluation** R.A. Kempton,P.N. Fox,M. Cerezo.2012-12-06 The International Centre for Advanced Mediterranean Agronomic Studies (CIHEAM), established in 1962, is an intergovernmental organization of four teen countries: Albania, Algeria, Egypt, France, Greece, Italy, Lebanon, Malta, Morocco, Portugal, Spain, Tunisia, Turkey and Yugoslavia. Four institutes (Bari, Italy; Chania, Greece; Montpellier, France and Zaragoza, Spain) provide post-graduate education at the Master of Science level. CIHEAM promotes research networks on Mediterranean agricultural priorities, supports the organization of specialized education in member countries, holds seminars and workshops bringing together technologists and scientists involved in Mediterranean agriculture and regularly produces diverse publications including the series 'Options Mediterraneennes'. Through these activities, CIHEAM promotes North/South dialogue and international co-operation for agricultural development in the Mediterranean region. Plant breeding is, since 1982, one of the fields in which CIHEAM is conducting a programme of training and promotion of research, through its Mediterranean Agronomic Institute of Zaragoza. The programme includes a one-year advanced specialization course, a series of two-week courses for professionals, and support for collaborative research activities in Mediterranean-relevant species. Many of these activities are organized in collaboration with national and international institutions. The publication in 1993 of *Plant Breeding. Principles and Prospects*, which initiated the Chapman & Hall's Plant Breeding Series, has become an important feature of CIHEAM's plant breeding programme. We are now pleased to add a further volume to that series: the present book, *Statistical Methods for Plant Variety Evaluation*.

**Arnhem 1944** Martin Middlebrook.2019-03-13 Arnhem - it was the last major battle lost by the British Army, lost not by the men who fought there but by the overconfidence of generals, faulty planning and the failure of a relieving force given too great a task. If the operation of which Arnhem formed a part had been successful, the outcome of the war and the history of post-war Europe would have been greatly altered. Yet is it worth another book? I had fulfilled all my literary ambitions by researching and writing thirteen full-length books and was ready to retire from that laborious craft when Peter van Gorsel, head of Penguin's Dutch office, asked me to write a book on Arnhem for the fiftieth anniversary in 1994. It was the first time that my publishers had requested a book; all previous subjects had been my choice. I eventually agreed for several reasons. I had not previously researched and written about the British Army in the Second World War and had not previously done any work in Holland; so two fresh fields were opened up to me. I also felt that the fighting in and around Arnhem had still not been described in the detail that it merited.

**17th European Symposium on Computer Aided Process Engineering** Valentin Pleşu,Paul Şerban Agachi.2007 The 17th European Symposium on Computed Aided Process Engineering contains papers presented at the 17th European Symposium of Computer Aided Process Engineering (ESCAPE 17) held in Bucharest, Romania, from 27-30 May 2007. The ESCAPE series serves as a forum for scientists and engineers from academia and industry to discuss progress achieved in the area of Computer Aided Process Engineering (CAPE). The main goal was to emphasize the continuity in research of innovative concepts and systematic design methods as well the diversity of applications emerged from the demands of sustainable development. ESCAPE 17 highlights the progress software technology needed for implementing simulation based tools. The symposium is based on 5 themes and 27 topics, following the main trends in CAPE area: Modelling, Process and Products Design, Optimisation and Optimal Control and Operation, System Biology and Biological Processes, Process Integration and Sustainable Development. Participants from 50 countries attended and

invited speakers presented 5 plenary lectures tackling broad subjects and 10 keynote lectures. Satellite events added a plus to the scientific dimension to this symposium. \* All contributions are included on the CD-ROM attached to the book \* Attendance from 50 countries with invited speakers presenting 5 plenary lectures tackling broad subjects and 10 keynote lectures

The Last Wish Andrzej Sapkowski.2010-08-19 Geralt is a witcher, a man whose magic powers, enhanced by long training and a mysterious elixir, have made him a brilliant fighter and a merciless assassin. Yet he is no ordinary murderer: his targets are the multifarious monsters and vile fiends that ravage the land and attack the innocent. He roams the country seeking assignments, but gradually comes to realise that while some of his quarry are unremittingly vile, vicious grotesques, others are the victims of sin, evil or simple naivety. One reviewer said: 'This book is a sheer delight. It is beautifully written, full of vitality and endlessly inventive: its format, with half a dozen episodes and intervening rest periods for both the hero and the reader, allows for a huge range of characters, scenarios and action. It's thought-provoking without being in the least dogmatic, witty without descending to farce and packed with sword fights without being derivative. The dialogue sparkles; characters morph almost imperceptibly from semi-cliche to completely original; nothing is as it first seems. Sapkowski succeeds in seamlessly welding familiar ideas, unique settings and delicious twists of originality: his Beauty wants to rip the throat out of a sensitive Beast; his Snow White seeks vengeance on all and sundry, his elves are embittered and vindictive. It's easily one of the best things I've read in ages.'

**Fundamentals of Natural Gas Processing** Arthur J. Kidnay,William R. Parrish.2006-06-21 Fundamentals of Natural Gas Processing explores the natural gas industry from the wellhead to the marketplace. It compiles information from the open literature, meeting proceedings, and experts to accurately depict the state of gas processing technology today and highlight technologies that could become important in the future. This book covers *Modernization of Oil and Gas Reporting (US Securities and Exchange Commission Regulation) (Sec) (2018 Edition)* The Law Library.2019-01-28 The Law Library presents the complete text of the Modernization of Oil and Gas Reporting (US Securities and Exchange Commission Regulation) (SEC) (2018 Edition). Updated as of May 29, 2018 The Commission is adopting revisions to its oil and gas reporting disclosures which exist in their current form in Regulation S-K and Regulation S-X under the Securities Act of 1933 and the Securities Exchange Act of 1934, as well as Industry Guide 2. The revisions are intended to provide investors with a more meaningful and comprehensive understanding of oil and gas reserves, which should help investors evaluate the relative value of oil and gas companies. In the three decades that have passed since adoption of these disclosure items, there have been significant changes in the oil and gas industry. The amendments are designed to modernize and update the oil and gas disclosure requirements to align them with current practices and changes in technology. The amendments concurrently align the full cost accounting rules with the revised disclosures. The amendments also codify and revise Industry Guide 2 in Regulation S-K. In addition, they harmonize oil and gas disclosures by foreign private issuers with the disclosures for domestic issuers. This ebook contains: - The complete text of the Modernization of Oil and Gas Reporting (US Securities and Exchange Commission Regulation) (SEC) (2018 Edition) - A dynamic table of content linking to each section - A table of contents in introduction presenting a general overview of the structure

**LNG Markets in Transition** Anne-Sophie Corbeau,David Ledesma.2016 The present situation in the LNG market should be seen as a 'crossroads' for the industry. The LNG industry has not been static over the past 5 decades and has already experienced many changes, but still the model of long-term contracts prevails and the majority of LNG is still bought at oil-indexed gas prices. There have however been considerable changes: an increase in short-term trading of LNG, buyer contractual flexibility and FOB contracts which have led to around a quarter of the LNG is being traded under spot and short-term contracts, with aggregators play a far more significant role. All these factors have influenced project business structures. The industry has now embarked on a period of further change, with 180 bcm of new LNG export capacity (equivalent to more than 50% of LNG trade in 2014) under construction at a time when the assumed rapid LNG demand growth in Asia appears to be slowing. The absorption of this new supply will affect, not only trade-flow patterns, but also pricing dynamics, competition with other gas supply channels and (in the power sector) potentially other fuels. Key to this change is US LNG, with buyers becoming more selective about the price and delivery terms they are ready to accept. Sellers however are facing high costs and are reluctant to abandon a business model in which they have confidence. Oil indexation is under further attack with US LNG selling at HH indexed prices (plus costs), and other sellers and buyers have been pressured to adopt different pricing policies and secure more contractual flexibility. This volume examines the development of the LNG business over the past 50 years and examines how the industry will change over the coming 15 years, faced by unprecedented challenges to its historic business model.

**Liquid Natural Gas in the United States** John Hrastar.2014-06-24 When natural gas was first discovered in Appalachia in the 19th century, its development as a fuel was rapid. Unlike oil and coal, gas could be moved only by pipeline and required large containers for storage. It was not possible to cope with peak loads without adding excessive pipeline capacity until just before World War II, when two sister gas companies developed a plant to liquefy and store natural gas as a liquid; the liquid was then regasified to deal with peak loads. The liquid is 1/600 the volume of the gas, but it requires storage at an extremely low temperature, 1-260°F. This worked well until 1944, when a liquid natural gas (LNG) tank in Cleveland ruptured and caused a fire with 130 fatalities. The fire did not end the industry but caused it to pause. Over the next few years the problems in materials, design, standards, and siting were solved. The recognition that liquefaction made LNG transportable without a pipeline was the breakthrough. In 1959 a shipload of LNG went from Louisiana to Britain and restarted the LNG industry. It is now a major worldwide energy industry and the topic of this work.

**Energy Subsidy Reform** Mr. Benedict J. Clements,David Coady,Ms. Stefania Fabrizio,Mr. Sanjeev Gupta,Mr. Trevor Serge Coleridge Alleyne,Mr. Carlo A. Sdrilevich.2013-09-13 Energy subsidies have wide-ranging economic consequences. Although they are aimed at protecting consumers, subsidies aggravate fiscal imbalances, crowd out priority public spending, and depress private investment, including in the energy sector. Subsidies also distort resource allocation by encouraging excessive energy consumption, artificially promoting capital-intensive industries, reducing incentives for investment in renewable energy, and accelerating the depletion of natural resources. Most subsidy benefits are captured by higher-income households, reinforcing inequality. Even future generations are affected through the damaging effects of increased energy consumption on global warming. This book provides (1) the most comprehensive estimates of energy subsidies currently available for 176 countries and (2) an analysis of "how to do" energy subsidy reform, drawing on insights from 22 country case studies undertaken by the IMF staff and analyses carried out by other institutions.
