Serve and Live with Honour Colonel A. Ponnuchamy.2018-04-05
Often, I heard, during my Army service spanning over 33 years, the saying that 'GENERALS DO NOT RETIRE, THEY FADE AWAY'. This, has got a lot of meaning in it and is certainly debatable. My aim, of writing this book is purely to motivate the younger generation to work hard, be sincere, be loyal and above all persevere to achieve their cherished goals. In all humility, I would like to say that I have no intention to beat my own drums, or for that matter discredit any one while narrating my experience. I, follow the dictum that if I have nothing other than praise for anybody, I refrain from saying anything ill . I must confess, that I came up in a hard way with the grace GOD ALMIGHTY and the utter perseverance of my parents and also my uncle (Chithappa) who sacrificed everything in my raising. The

least, I could do to them was to live up to their expectations and follow their guiding principles. What, they did for me to motivate me and instill in me the courage and determination to face life in all its reality, I would like to share with the young readers to enable them to rise in life. If, even one student reader benefits by reading this book, I will fully be satisfied for compiling the experiences of my life.

Handbook of Research on Advanced Functional Materials for Orthopedic Applications Ranjith, R., Davim, J. Paulo. 2023-08-29 Scaffold bone replacements are a safe and effective way to cure bone abnormalities, and porous scaffolds can be manufactured using additive manufacturing technology. When scaffolds are implanted in a damaged location, they quickly connect to the host tissue and integrate, stimulating bone production and development. The qualities of porous titanium must be matched to the properties of human bones (i.e., age, sex, and hormones). Using subtractive manufacturing, it is extremely difficult to create the complicated porous structure necessary for the desired characteristic. The Handbook of Research on Advanced Functional Materials for Orthopedic Applications highlights current research pertinent to the orthopedic applications of additive-produced scaffolds in order to consider the latest breakthroughs in the synthesis and multifunctional applications of scaffolds. Covering key topics such as tissue, additive manufacturing, and biomaterial, this major reference work is ideal for industry professionals, engineers, researchers, academicians, practitioners, scholars, instructors, and students.
