Security Education, Awareness and Training Carl Roper, Dr. Lynn Fischer, Joseph J. Grau, Lynn F. Fischer, Joseph A. Grau. 2005-08-23 This book is the only one available on security training for all level of personnel. Currently, there are a handful of titles that cover guard forces and protection officers, but none that speak to security training for government, security, and non-security professionals. Chief Security Officers (CSO), security managers, and heads of security forces often have to design training programs themselves from scratch or rely on outside vendors and outside training companies to provide training which is often dry, stilted, and not always applicable to a specific corporate or government setting. *Security Education, Awareness and Training* addresses the theories of sound security training and awareness, then shows the reader how to put the theories into practice when developing or presenting any form of security education, training, motivation or awareness to organizational employees. Motivation is a key factor in how a trainer can make security essential to an organization and individual employees; it also speaks to the necessity of security and helps to shape policy and ways of making security inherent and easy for the employee to ensure a safe facility and working environment. Quite simply, there is no other book like this on the market today, and this one will be the one everyone turns to in order to learn and use for their own security programs. All three authors have at least 20 years each in one aspect of the security business or another, whether it be in program management, educational products, training, or research. But it should be added that, while working at the Department of Defense (DoD) Security Institute, we collaborated in developing and teaching an innovative course specifically for security educators. The course attendees were individually tasked in their own organization to develop and execute educational security programs for their general employee populations. Usually they were starting from scratch rather than taking over from a previous security educator. Often these

programs were described as security awareness programs, sometimes security education programs, an often security training. In those days the student clientele for the Security Educators Seminar were drawn largely from industry and government agencies where the. These seminar attendees had many goals: safety, protection of proprietary information including protecting government and classified information, access control, coping with work-place violence, anti-terrorism, facility protection often a range of educational tasks rolled into the position description of a single person. What these professionals needed was not an understanding of security as we defined it, but skills and techniques for imparting awareness of vulnerabilities, threats, and consequences of ignorance; essential know-how to prevent bad things from happening; and strategies for enhancing motivations to do the right thing at the right time. We saw the central concept to be communication how to reach people, capture their attention, and ensure retention of essential information within security training programs. Over the years, there has always been the conflict between time, cost, and resources and the need for security awareness training. Now, it seems more corporations and government operations and facilities are willing to invest the time and money needed to properly train and education employees. While technology and corporate dynamics have changed and developed, the need for security awareness training has remained, in fact, has never been greater. These fundamental issues of awareness, motivation, and communication have not changed, and the proposed book is the authors attempt to fill such a need in security training. - Discusses how to establish and integrate a structured, internally consistent and coherent program from the ground up - Assess and analyze security program needs and audience and customize training accordingly - Numerous Appendices to help the security manager justify security spending on training initiatives - Notes in margins emphasize key points and make for easy reference in training preparation

Press On! Donn Starry, General Donn a Starry. 2013-12 General Starry's range of interests, as will be apparent to all who come to this collection, was extraordinarily broad. Many topics he addressed repeatedly over long periods of time, his views-and his articulation of those views-evolving over the years. That is particularly the case with respect to doctrinal matters, the tank-antitank calculus, and the preeminent importance of the individual soldier. Materials chosen for inclusion in this collection accordingly reflect some repetition, especially in matters of long-term interest to General Starry, illustrating how his thinking developed. Starry himself often made intentional use of repetition, as for example in his well-known speech Tanks Forever and Ever, in which he recapitulated virtually his entire argument from the earlier Tanks Forever. To provide some structure to this wide range of material, it was decided to present items in categories and then, within those categories, chronologically. As will be apparent, quite a number of the pieces could just as well have been inserted in other categories, so where to place them was simply a matter of editorial judgment. The real impact of this material is, in any event, in its cumulative depth and range, so it is hoped that many readers will make their way through the entirety of the collection. For those primarily

concerned with particular aspects of General Starry's eclectic interests, in addition to categorizing the materials under topical headings, an extensive index has been provided. Articles and speeches are, for the most part, rendered in their entirety. Where exceptions have been made, those are indicated in the usual manner by the use of ellipses. When it comes to messages and correspondence, however, only internal omissions have been shown and, in the majority of cases, what has been included is only a pertinent excerpt from a longer communication. Often General Starry annotated papers to show that he had seen them by drawing a small star and inserting within it a capital letter Y (thus Starry). An example may be seen on the book's back cover and at certain other points in the text. A frequent sign-off, often followed by the hand-drawn star, was Press On! which has thus been adopted for this collection's main title. Finally, there will be found, in some categories of materials, considerable discussion of the threat. In the context of the times, of course, that meant primarily the Soviet and Warsaw Pact threat, which also constituted the principal anticipated adversary in the much-discussed Central Battle. While that threat no longer exists, at least to the same degree, it is important to be aware of the Starry conception and depiction of it in order to understand much of what-in terms of doctrine, tactics, equipment, and training-was driven primarily by contemporary appreciation of that threat.

Deep operations require boldness and audacity, and yet carry an element of risk of overextension - especially in light of the independent factors of geography and weather that are ever-present. As a result, the case studies address not only successes, but also failure and shortfalls that result when conducting deep operations. The final two chapters address these considerations for future Deep Maneuver.

Superforecasting Philip E. Tetlock, Dan Gardner.2015-09-29 NEW YORK TIMES BESTSELLER • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY THE ECONOMIST “The most important book on decision making since Daniel Kahneman's Thinking, Fast and Slow.”—Jason Zweig, The Wall Street Journal Everyone would benefit from seeing further into the future, whether buying stocks, crafting policy, launching a new product, or simply planning the week’s meals. Unfortunately, people tend to be terrible forecasters. As Wharton professor Philip Tetlock showed in a landmark 2005 study, even experts’ predictions are only slightly better than chance. However, an important and underreported conclusion of that study was that some experts do have real foresight, and Tetlock has spent the past decade trying to figure out why. What makes some people so good? And can this talent be taught? In Superforecasting, Tetlock and coauthor Dan Gardner offer a masterwork on

prediction, drawing on decades of research and the results of a massive, government-funded forecasting tournament. The Good Judgment Project involves tens of thousands of ordinary people—including a Brooklyn filmmaker, a retired pipe installer, and a former ballroom dancer—who set out to forecast global events. Some of the volunteers have turned out to be astonishingly good. They've beaten other benchmarks, competitors, and prediction markets. They've even beaten the collective judgment of intelligence analysts with access to classified information. They are superforecasters. In this groundbreaking and accessible book, Tetlock and Gardner show us how we can learn from this elite group. Weaving together stories of forecasting successes (the raid on Osama bin Laden's compound) and failures (the Bay of Pigs) and interviews with a range of high-level decision makers, from David Petraeus to Robert Rubin, they show that good forecasting doesn't require powerful computers or arcane methods. It involves gathering evidence from a variety of sources, thinking probabilistically, working in teams, keeping score, and being willing to admit error and change course. Superforecasting offers the first demonstrably effective way to improve our ability to predict the future—whether in business, finance, politics, international affairs, or daily life—and is destined to become a modern classic.

Urban Operations U. S. Department of the Army.2013-01-17 Doctrine provides a military organization with a common philosophy, a language, a purpose, and unity of effort. Rather than establishing a set of hard and fast rules, the objective of doctrine is to foster initiative and creative thinking. To this end, FM 3-06 discusses major Army operations in an urban environment. This environment, consisting of complex terrain, a concentrated population, and an infrastructure of systems, is an operational environment in which Army forces will operate. In the future, it may be the predominant operational environment. Each urban operation is unique and will differ because of the multitude of combinations presented by the threat, the urban area itself, the major operation of which it may be part (or the focus), and the fluidity of societal and geopolitical considerations. Therefore, there will always exist an innate tension between Army doctrine, the actual context of the urban operation, and future realities. Commanders must strike the proper balance between maintaining the capability to respond to current threats and preparing for future challenges. This manual provides the analytical tools for evaluating an urban operation to determine if the operation

is necessary for overall mission success. It also provides the means to understanding and determining the impacts of the urban environment on military operations and provides information on managing, taking advantage of, and mitigating the effects of those impacts as appropriate. As such, this manual demonstrates how to apply the doctrinal principles in FM 3-0 to this unique environment.
