The Case for Marriage Linda Waite,Maggie Gallagher.2002-03-05 A groundbreaking look at marriage, one of the most basic and universal of all human institutions, which reveals the emotional, physical, economic, and sexual benefits that marriage brings to individuals and society as a whole. The Case for Marriage is a critically important intervention in the national debate about the future of family. Based on the authoritative research of family sociologist Linda J. Waite, journalist Maggie Gallagher, and a number of other scholars, this book's findings dramatically contradict the anti-marriage myths that have become the common sense of most Americans. Today a broad consensus holds that marriage is a bad deal for women, that divorce is better for children when parents are unhappy, and that marriage is essentially a private choice, not a public institution. Waite and Gallagher flatly contradict these assumptions, arguing instead that by a broad range of indices, marriage is actually better for you than being single or divorced- physically, materially, and spiritually. They contend that married people live longer, have better health, earn more money, accumulate

more wealth, feel more fulfillment in their lives, enjoy more satisfying sexual relationships, and have happier and more successful children than those who remain single, cohabit, or get divorced. The Case for Marriage combines clearheaded analysis, penetrating cultural criticism, and practical advice for strengthening the institution of marriage, and provides clear, essential guidelines for reestablishing marriage as the foundation for a healthy and happy society. "A compelling defense of a sacred union. The Case for Marriage is well written and well argued, empirically rigorous and learned, practical and commonsensical." -- William J. Bennett, author of *The Book of Virtues* "Makes the absolutely critical point that marriage has been misrepresented and misunderstood." -- *The Wall Street Journal* www.broadwaybooks.com

Killing Christians Tom Doyle,Gref Webster.2015-03-17 Could you retain your faith even if it meant losing your life? Your family's lives? To many Christians in the Middle East today, a "momentary, light affliction" means enduring only torture instead of martyrdom. The depth of oppression Jesus followers suffer is unimaginable to most Western Christians. Yet, it is an everyday reality for those who choose faith over survival in Syria, Iran, Egypt, Lebanon, and other countries hostile to the Gospel of Christ. In *Killing Christians*, Tom Doyle takes readers to the secret meetings, the torture rooms, the grim prisons, and even the executions that are the "calling" of countless Muslims-turned-Christians. Each survivor longs to share with brothers and sisters "on the outside" what Christ has taught them. *Killing Christians* is their message to readers who still enjoy freedom to practice their faith. None would wish their pain and suffering on those who do not have to brave such misery, but the richness gained through their remarkable trials are delivered—often in their own words—through this book. The stories are breathtaking, the lessons soul-stirring and renewing. *Killing Christians* presents the dead serious work of expanding and maintaining the Faith.

Science of Coercion Christopher Simpson.2015-03-03 A provocative and eye-opening study of the essential role the US military and the Central Intelligence Agency played in the advancement of communication studies during the Cold War era, now with a new introduction by Robert W. McChesney and a new preface by the author Since the mid-twentieth century, the great advances in our knowledge about the most effective methods of mass communication and persuasion have been visible in a wide range of professional fields, including journalism, marketing, public relations, interrogation, and public opinion studies. However, the birth of the modern science of mass communication had surprising and somewhat troubling midwives: the military and covert intelligence arms of the US government. In this fascinating study, author Christopher Simpson uses long-classified documents from the Pentagon, the CIA, and other national security agencies to demonstrate how this seemingly benign social science grew directly out of secret government-funded research into psychological warfare. It reveals that many of the most respected pioneers in the field of communication science were knowingly complicit in America's Cold War efforts, regardless of their personal politics or individual moralities, and that

their findings on mass communication were eventually employed for the purposes of propaganda, subversion, intimidation, and counterinsurgency. An important, thought-provoking work, *Science of Coercion* shines a blazing light into a hitherto remote and shadowy corner of Cold War history.

Histories of Racial Capitalism Justin Leroy, Destin Jenkins. 2021-02-09 The relationship between race and capitalism is one of the most enduring and controversial historical debates. The concept of racial capitalism offers a way out of this impasse. Racial capitalism is not simply a permutation, phase, or stage in the larger history of capitalism—since the beginning of the Atlantic slave trade and the colonization of the Americas, capitalism, in both material and ideological senses, has been racial, deriving social and economic value from racial classification and stratification. Although Cedric J. Robinson popularized the term, racial capitalism has remained undertheorized for nearly four decades. *Histories of Racial Capitalism* brings together for the first time distinguished and rising scholars to consider the utility of the concept across historical settings. These scholars offer dynamic accounts of the relationship between social relations of exploitation and the racial terms through which they were organized, justified, and contested. Deploying an eclectic array of methods, their works range from indigenous mortgage foreclosures to the legacies of Atlantic-world maroons, from imperial expansion in the continental United States and beyond to the racial politics of municipal debt in the New South, from the ethical complexities of Latinx banking to the postcolonial dilemmas of extraction in the Caribbean. Throughout, the contributors consider and challenge how some claims about the history and nature of capitalism are universalized while others remain marginalized. By theorizing and testing the concept of racial capitalism in different historical circumstances, this book shows its analytical and political power for today's scholars and activists.

The Supplement Handbook Mark Moyad, Janet Lee. 2014-11-04 Nearly half of Americans use supplements—and many more are curious about them—yet questions abound. Will feverfew help my migraines? Mark Moyad, MD, MPH is the only physician in the United States who has an endowed position to study vitamins, minerals, herbs, and other supplements. For the past 25 years, he's been researching supplements, using them in his practice, and traveling the country giving lectures to laypeople and physicians about what works and what's worthless in the world of drugs and supplements. Based on the latest research as well as Dr. Moyad's clinical experience, *The Supplement Handbook* guide you through the proven (or debunked) treatment options for more than 100 common conditions—everything from arthritis, heartburn, and high cholesterol to fibromyalgia, migraines, and psoriasis. Early Childhood Assessment National Research Council, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Board on Children, Youth, and Families, Committee on Developmental Outcomes and Assessments for Young Children. 2008-12-21 The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. Early Childhood Assessment addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.

America's High School Sophomores Kenneth A. Rasinski. 1993 This study of high school sophomores in 1980 and 1990 compares the experiences of students in the two cohorts, identifying changes in in-school and out-of-school activities, academic achievement, self-concept, values, plans, and aspirations. Similarities and differences between the two groups are documented using data from the National Education Longitudinal Study of 1988 (NELS:88) and High School and Beyond (HS&B, 1980). HS&B and NELS:88 sophomores are marked by basic demographic differences, including the smaller size of the NELS:88 1990 cohort, reflecting the baby bust of the 1970s, and a higher proportion of racial minority and poverty status sophomores in 1990. NELS:88 sophomores also reflect the influence of various waves of school reform since the late 1970s and early 1980s. Overall, the comparison paints a picture that is in most respects encouraging in its portrayal of the high school academic orientation and postsecondary expectations of the 1990 sophomore class. Positive changes, however, are typically small or moderate in magnitude. Among the findings are: (1) general and college preparatory program placement has increased, at the expense of vocational program placement; (2) patterns of extracurricular

participation changed especially in musical activities (31% in 1980 to 22% in 1990) and in hobby clubs (21% in 1980 to 7% in 1990); (3) changes in sophomores giving high importance to particular life values (e.g., marriage and family 83% rating this as very important in 1980, 72% in 1990); (4) small but statistically significant increase in the number of females aspiring to traditionally male-dominated non-professional occupations (15.6% in 1980 versus 18.% in 1990). Sixteen tables and 13 figures present data from the 2 studies. Three appendixes contain information about the survey sample sizes, standard errors, and other methodological and technical information. Appendix A contains an additional 20 data tables. (Contains 46 references.) (SLD)

In everyone's medical treatment, there are benefits from a balance of natural and conventional medicine. Individuals deserve to be given the information required to make their own decisions, not only in treatment options for problems that might arise, but in the development of a healthy overall lifestyle. This book gives you the best interventions to improve your gut health, including how to change your diet to optimize your digestive system and enhance total body function. The Soil and Health Albert Howard.2020-03-22 This is a newly edited revision of Albert Howard's important text on organic farming and gardening, and the central role of humus in maintaining soil health and fertility. No single generation has the right to exhaust the soil from which humanity must draw its sustenance. Modern agricultural practices, with their emphasis on chemicals, poisons, and toxins, lead to the impoverishment and death of the soil. THE SOIL AND HEALTH is a detailed analysis of the vital role of humus and compost in soil health — and the importance of soil health to the health of crops and the humans who eat them. The author is keenly aware of the dead end which awaits humanity if we insist on growing our food

using artificial fertilisers and poisons. Albert Howard (1873-1947) was one of the leaders of the British organics movement in the mid-twentieth century. He was the first westerner to document and publish research on traditional techniques of agriculture, including Indian and Chinese farming and management of the soil. Agriculture is the fundamental industry of the world and must be allowed to occupy the primary position in the economies of all countries. — Albert Howard
