Dictionary of Building and Civil Engineering .2013-12-20 In the last few decades civil engineering has undergone substantial technological change which has, naturally, been reflected in the terminology employed in the industry. Efforts are now being made in many countries to bring about a systematization and unification of technical terminology in general, and that of civil engineering in particular. The publication of a multilingual dictionary of civil engineering terms has been necessitated by the expansion of international cooperation and information exchange in this field, as well as by the lack of suitable updated bilingual dictionaries. This Dictionary contains some 14.000 English terms together with their German, French, Dutch and Russian equivalents, which are used in the main branches of civil engineering and relate to the basic principles of structural design and calculations (the elasticity theory, strength of materials, soil mechanics and other allied technical disciplines); to buildings and installations, structures and their parts, building materials and prefabrications, civil engineering technology and practice, building and road construction machines, construction site equipment, housing equipment and fittings (including modern systems of air conditioning); as well as to hydrotechnical and irrigation constructions. The Dictionary also includes a limited number of basic technical expressions and terms relating to allied disciplines such as architecture and town planning, as well as airfield, railway and underground construction. The Dictionary does not list trade names of building materials, parts and machines or the names of chemical compounds. Nor does it give adverbial, adjective or verbal terms.

Advanced Concrete Technology Zongjin Li.2011-01-11 Over the past two decades concrete has enjoyed a renewed level of research and testing, resulting in the development of many new types of concrete. Through the use of various additives, production techniques and chemical processes, there is now a great degree of control over the properties of specific concretes for a wide range of applications. New theories, models and testing techniques have also been developed to push the envelope of concrete as a building material. There is no current textbook which brings all of these advancements together in a single volume. This book aims to bridge the gap between the traditional concrete technologies and the emerging state-of-the-art technologies which are gaining wider use.

TEKNOLOGI BETON Fauzan Hamdi, Franky Edwin Paskalis Lapian, Miswar Tumpu, Mansyur, Irianto, Didik Suryamiharja S. Mabui, Adri Raidyarto, Ardi Azis Sila, Masdiana, Parea Rusan Rangan, Hamkah.2022-03-23 Beton adalah bahan komposit yang terbuat dari beberapa material, yang menggunakan bahan utama yaitu semen, agregat halus, agregat kasar, air dan material tambahan jika dibutuhkan dengan komposisi tertentu. Beton adalah material komposit, oleh karena itu kualitas beton sangat tergantung dari kualitas masing-masing material pembentuknya. Beton merupakan bahan konstruksi yang banyak digunakan pada bangunan struktur. Bisa dikatakan semua bangunan struktur dibangun menggunakan beton sebagai bahan

konstruksi utama, contohnya yaitu struktur gedung, struktur bangunan air, struktur bangunan transportasi dan banyak lagi bangunan struktur lainnya. Salah satunya kelebihan beton yaitu mampu menahan beban tekan, perubahan cuaca, suhu yang tinggi, dapat dibentuk dan mudah dirawat. Berkembangnya ilmu pengetahuan khususnya di bidang konstruksi, maka material penyusun beton juga mengalami perkembangan. Sebagian produsen semen di Indonesia sudah mengadopsi semen kombinasi (blended cement) yang sudah dibesarkan terlebih dulu di sebagian negeri di Eropa, Amerika, Jepang serta lain-lain, salah satunya adalah abu terbang sebagai salah satu material pozzolan yang bisa dicampur bersama klinker semen untuk memproduksi semen kombinasi. Dalam dekade terakhir, di Indonesia, bersumber pada pertimbangan konservasi alam, pengurangan limbah semacam abu terbang, penyusutan emisi CO₂ serta faktor-faktor lain yang terpaut dengan pembangunan infrastruktur berkepanjangan, sudah terdapat kecenderungan yang kokoh ke arah pengembangan alternatif untuk pembuatan semen kombinasi ramah lingkungan semacam semen portland komposit (Portland Composite Cement). Banyak upaya sudah dicoba untuk mengurangi jejak karbon industri semen, misalnya i) tingkatkan efisiensi tenaga; ii) mengubah bahan bakar fosil dengan sumber tenaga alternatif semacam residu hewan, lumpur limbah serta minyak limbah; iii) substitusi semen Portland tradisional dengan bahan semen alternatif, semacam slag furnace serta abu pembakaran batubara serta masih banyak lagi teknologi lain yang diterapkan.

Reinforced Concrete James Grierson MacGregor. 1997 Based on the 1995 edition of the American Concrete Institute Building Code, this text explains the theory and practice of reinforced concrete design in a systematic and clear fashion, with an abundance of step-by-step worked examples,

illustrations, and photographs. The focus is on preparing students to make the many judgment decisions required in reinforced concrete design, and reflects the author's experience as both a teacher of reinforced concrete design and as a member of various code committees. This edition provides new, revised and expanded coverage of the following topics: core testing and durability; shrinkage and creep; bases the maximum steel ratio and the value of the factor on Appendix B of ACI318-95; composite concrete beams; strut-and-tie models; dapped ends and T-beam flanges. It also expands the discussion of STMs and adds new examples in SI units.

Sulphur Extended Asphalt Base Evaluation, Alachua County, Gainesville, Florida Charles F. Potts.1981 The purpose of the project constructed in Florida was to design, build, and evaluate a bituminous base course using sulphur as an asphalt cement extender. This evaluation was developed in a manner consistent with procedures used in base satellite projects constructed throughout the state. The test sections are located in Alachua County and were incorporated as a part of the new construction of a four-lane divided roadway. The project itself consists of one control section and seven test sections, each approximately 600 feet (183 m) long. Four of the test sections have SEA binders.
