A Companion to Feminist Geography Lise Nelson, Joni Seager. 2008-04-15 A Companion to Feminist Geography captures the breadth and diversity of this vibrant and substantive field. Shows how feminist geography has changed the landscape of geographical inquiry and knowledge since the 1970s. Explores the diverse literatures that comprise feminist geography today. Showcases cutting-edge research by feminist geographers. Charts emerging areas of scholarship, such as the body and thenation. Contributions from 50 leading international scholars in the field. Each chapter can be read for its own distinctive contribution.

Class-book of geography: physical and descriptive Robert Anderson (schoolmaster.). 1864

An Introduction to the Geography of Tourism Velvet Nelson. 2017-03-03 Tourism is an astonishingly complex phenomenon that is becoming an ever-greater part of life in today's global world. This clear and engaging text introduces undergraduate students to this vast and diverse subject through the lens of geography, the only field with the breadth to consider all of the aspects, activities, and perspectives that constitute tourism. Indeed, geography and tourism have always been interconnected, and Velvet Nelson reinforces the relationship between them by using both human and physical geography to interpret all facets of tourism—economic, social, and environmental. She shows how geography provides the tools and concepts to consider both the positive and negative factors that affect tourists and destinations as well as the effects tourism has on both peoples and places. Her real-world case studies, based both on research and on the experiences of tourists themselves, vividly illustrate key issues. This comprehensive, thematically organized introduction will enhance students' understanding of geographic concepts and how they can be used as a way of viewing and understanding the world.

Megapolitan America Arthur Nelson, Robert Lang. 2018-02-06 With an expected population of 400 million by 2040, America is morphing into an economic system composed of twenty-three 'megapolitan' areas that will dominate the nation's economy by midcentury. These 'megapolitan' areas are networks of metropolitan areas sharing common economic, landscape, social, and cultural characteristics. The rise of 'megapolitan' areas will change how America plans. For instance, in an area comparable in size to France and the low countries of the Netherlands and Belgium – considered among the world's most densely settled – America's 'megapolitan' areas are already home to more than two and a half times as many people. Indeed, with only eighteen percent of the contiguous forty-eight states' land base, America's megapolitan areas are more densely settled than Europe as a whole or the United Kingdom. Megapolitan America goes into spectacular demographic, economic, and social detail in mapping the dramatic – and surprisingly optimistic – shifts ahead. It will be required reading for those interested in America's future.

New Zealand, Its Physical Geography, Geology and Natural History Ferdinand von Hochstetter, Edward Sauter. 1867 Inhabited by Polynesians since the thirteenth century and discovered by Europeans in the seventeenth, New Zealand is a geologically diverse island group where active volcanoes and frequent earthquakes have resulted in a rich variety of rock formations and geothermal activity. In 1859-60, the geologist Ferdinand von Hochstetter (1829-84) was employed by Auckland's government to undertake the first systematic geological survey of the

islands, the results of which were first published in German in 1863 and translated into this English version in 1867. Hochstetter describes his travels across New Zealand, his encounters with native people and his scientific observations. He analyses plants, wildlife and fossils, describes mountains, rocks and boiling springs, and evaluates evidence of glaciers and tectonic activity. As a result of Hochstetter's work, several species in New Zealand were named after him. This book remains a valuable resource in the history of Australasian natural science'-- Publisher.

Into Geography Patricia Harrison.1992

Geo-societal Narratives Martin Bohle,Eduardo Marone.2021-09-23 This book provides an accessible overview of the societal relevance of contemporary geosciences. Engaging various disciplines from humanities and social sciences, the book offers philosophical, cultural, economic, and geoscientific insights into how to contextualise geosciences in the node of Culture and Nature. The authors introduce two perspectives of societal geosciences, both informed by the lens of geoethics. Throughout the text core themes are explored; human agency, the integrity of place, geocentricity, economy and climate justice, subjective sense-making and spirituality, nationalism, participatory empowerment and leadership in times of anthropogenic global change. The book concludes with a discussion on culture, education, or philosophy of science as aggregating concepts of seemingly disjunct narratives. The diverse intellectual homes of the authors offer a rich resource in terms of how they perceive human agency within the Earth system. Two geoscientific perspectives and fourteen narratives from various cultural, social and political viewpoints contextualise geosciences in the World(s) of the Anthropocene.
