To place your standing order, please call 1-800-848-6224 (in the U.S.) or 919-966-7449 (outside the U.S.). Designed to complement the Mental Measurements Yearbooks, Tests in Print fills a pressing need for a comprehensive bibliography of all commercially available English language tests in print. Although these volumes are useful in and of themselves, their maximum usefulness requires the availability and use of the Mental Measurements Yearbooks. Although information on available tests and specific test bibliographies is valuable, the greatest service which Tests in Print can perform is to encourage test users to choose tests more wisely by consulting the MMY test reviews, test reviews from journals, and the professional literature on the construction, use, and validity of the tests being considered. Tests in Print VI contains information on over four thousand testing instruments. Informative descriptions of each test include specific data on their purpose, population, scoring, and pricing. Indexes of test titles, publishers, acronyms, and subject classifications are provided, as well as notations on out-of-print tests. Specific information about testing is required by a wide range of professionals in areas such as education, psychology, counseling, management, personnel, health care, career planning, sociology, child development, social science, and research. Tests in Print VI also serves as a comprehensive index to the Mental Measurements Yearbook series by directing readers to the appropriate volume for reviews of specific tests.

Model-Based Reasoning in Science and Technology Lorenzo Magnani,Claudia Casadio.2016-07-01 This book discusses how scientific and other types of cognition make use of models, abduction, and explanatory reasoning in order to produce important or creative changes in theories and concepts. It

includes revised contributions presented during the international conference on Model-Based Reasoning (MBR'015), held on June 25-27 in Sestri Levante, Italy. The book is divided into three main parts, the first of which focuses on models, reasoning and representation. It highlights key theoretical concepts from an applied perspective, addressing issues concerning information visualization, experimental methods and design. The second part goes a step further, examining abduction, problem solving and reasoning. The respective contributions analyze different types of reasoning, discussing various concepts of inference and creativity and their relationship with experimental data. In turn, the third part reports on a number of historical, epistemological and technological issues. By analyzing possible contradictions in modern research and describing representative case studies in experimental research, this part aims at fostering new discussions and stimulating new ideas. All in all, the book provides researchers and graduate students in the field of applied philosophy, epistemology, cognitive science and artificial intelligence alike with an authoritative snapshot of current theories and applications of model-based reasoning.

Mechanisms of Age-cognition Relations in Adulthood Timothy A. Salthouse.2013-05-13 This monograph is the written version of a series of talks delivered as recent MacEachran Lectures at the University of Alberta. The informal style of the lectures, and the inclusion of a relatively large number of figures, has been preserved in order to keep the monograph faithful to the concept of an individual attempting to integrate his own research into a reasonably coherent framework. Although the volume is very much a personal account of one individual's perspective, the studies reported are naturally a product of many collaborations as well as inspirations from colleagues. The fundamental issue addressed is how adult age differences in fluid or process aspects of cognitive functioning are to be explained. Several potential mediators are considered, with most of the emphasis devoted to the investigation of working memory and processing speed as variables mediating relations between age and cognition.

Individual Variation and the Bilingual Advantage - Factors that Modulate the Effect of Bilingualism on Cognitive Control and Cognitive

Reserve Maurits Van den Noort,Peggy Bosch,Esli Struys.2020-02-11 The number of bilingual and multilingual speakers around the world is steadily growing, leading to the questions: How do bilinguals manage two or more language systems in their daily interactions, and how does being bilingual/multilingual affect brain functioning and vice versa? Previous research has shown that cognitive control plays a key role in bilingual language management. This hypothesis is further supported by the fact that foreign languages have been found to affect not only the expected linguistic domains, but surprisingly, other non-linguistic domains such as cognitive control, attention, inhibition, and working memory. Somehow, learning languages seems to affect executive/brain functioning. In the literature, this is referred to as the bilingual advantage, meaning that people who learn two or more languages seem to outperform monolinguals in executive functioning skills. In this Special Issue, we first present studies that investigate the bilingual advantage. We also go one step further, by focusing on factors that modulate the effect of bilingualism on cognitive control. In the second, smaller part of our Special Issue, we focus on the cognitive reserve hypothesis with the aim of addressing the following questions: Does the daily use of two or more languages protect the aging individual against cognitive decline? Does lifelong bilingualism protect against brain diseases, such as dementia, later in life?

Short-term and Working Memory Susan E. Gathercole.2001 This special issue ponders a detailed and contemporary analysis of the theoretical underpinnings of short-term and working memory. Articles focus on short-term memory for phonological, semantic, and spatial material, on executive function and on short-term forgetting. The empirical perspectives include the neuroimaging of short-term memory, short-term memory development and the neuropsychology and neurobiology of memory, in addition to laboratory-based experimental studies. Together, these articles identify significant current models and approaches to short-term and working memory, providing a broad set of perspectives which illustrate the wide impact of working memory on the understanding of human cognition.

The SAGE Handbook of Innovation in Social Research Methods Malcolm Williams,W Paul Vogt.2011-04-19 Social research is a burgeoning field. Of course it has many traditions and approaches, but there is a high premium upon thinking differently and thinking anew because social life is never static or wholly predictable. The Handbook, edited by internationally recognized scholars, provides a comprehensive, pitch-perfect critical assessment of the field. The main features of the Handbook are: Clear organization into 4 parts dealing with The Social Context of Research; Design and Data Collection; Integrating The Analysis of New Data Types; Sampling, Inference and Measurement Clear, cutting edge chapters on Objectivity;

Causation; Organizing Social Research; Correspondence Analysis; Grounded Theory; Conversational Surveys; Mixed Methods; Meta-Analysis; Optimal Matching Analysis; GIS Analysis; Quantitative Narrative Analysis; Longitudinal Studies; SEM; MLM; Qualitative Comparative Analysis; Respondent Driven Sampling Brings together a glittering assembly of the key figures working in the field of research methods Demonstrates the continuities and productive tensions between classical traditions and real world research. The result is a superbly organized text which will be required reading for anyone interested in the routes and future of social research. It is an unparalleled teaching resource and a 'must have' for serious social researchers.

EBOOK: Mind Expanding: Teaching for Thinking and Creativity in Primary Education Rupert Wegerif.2010-08-16 An essential addition...Wegerif zooms in on the most important ingredient of all in a learning-to-learn classroom culture - the kinds of talk that are allowed and encouraged - and brings together both scholarly and practical approaches in a highly fruitful and accessible way. Guy Claxton, author of Building Learning Power, What's the Point of School? and New Kinds of Smart 'This is a thought-provoking and readable book, which makes a very good case for the importance of teaching thinking skills and encouraging creativity through dialogue.' Professor Neil Mercer, University of Cambridge, UK, author of Words and Minds and Dialogue and Development There is growing interest in developing flexible thinking and learning skills in the primary classroom but there has been little agreement as to exactly what these skills are and how best to teach for them. This innovative book responds to that challenge with a coherent account of what thinking and creativity are and how they can be taught. Taking a 'dialogic' approach, it shows how engaging children in real dialogue is possible in every area of the curriculum and how this can lead to more reflective, considerate and creative children who are able to think for themselves and to learn creatively. Wegerif explores the success of approaches such as Philosophy for Children, Thinking Together, Dialogic Teaching and Building Learning Power. Using illustrations and activities, he explains how teaching and learning across the primary curriculum can be transformed. This book is important reading for all primary teachers and trainees who are looking for practical ideas for teaching thinking. It will also be valuable for anyone who wants to understand education and think more about what is most important in education.

Raven's Progressive Matrices Rpm Practice Test Bright Minds Publishing.2016-10-06 Raven's Progressive Matrices or Raven's Matrices or RPM is a nonverbal group test typically used in educational settings. It is usually a 60-item test used in measuring abstract reasoning and regarded as a non-verbal estimate of intelligence or intelligence potential. It is the most common and popular test administered to groups ranging from 5-year-olds to the elderly. It is made of 60 multiple choice questions, listed in order of difficulty. It is used in education field (Gifted and Talented Education - GATE) evaluation and in work force evaluation. Raven's Matrices is commonly used for supervisory/entry level management positions and mid-level individual contributor positions. As a non-verbal measure, the test also provides a good measure of ability for individuals from different cultures because it is not influenced by language differences. This helps reduce cultural bias in your employee evaluations - an important benefit in today's multicultural society and global workforce.

Development of Mental Representation Irving E. Sigel.2013-06-17 There is a general and extensive literature in the development of representational thought and symbolic processes because of its centrality in human evolution. However, the umbrella of science and its method does not necessarily lead to a coherent conceptual model, or agreements among scholars. These basic differences among various disciplines have led to the creation of new and exciting realms of research. This book considers how representational or symbolic thought develops for children's use in a wide array of these circumstances.

Handbook of Nonverbal Assessment R. Steve McCallum.2013-06-29 The goal of this Handbook is to describe the current assessment strategies and related best practices to professionals who serve individuals from diverse cultures or those who have difficulty using the English language. It will be a valuable resource for school psychologists, special educators, speech and hearing specialists, rehabilitation counselors, as well as graduate-level students of school psychology and child and family psychology.

Personality, Stress and Problem Solving Sudarshan Hasija.1993 The book experimentally demonstrates that induced stress has adverse effects on the performance of not only the average intelligent person but has negative consequences for the high intelligence group and it leads to increase in state anxiety which in turn has debilitating effects.
