Machine Vision Jürgen Beyerer,Fernando Puente León,Christian Frese.2015-10-01 The book offers a thorough introduction to machine vision. It is organized in two parts. The first part covers the image acquisition, which is the crucial component of most automated visual inspection systems. All important methods are described in great detail and are presented with a reasoned structure. The second part deals with the modeling and processing of image signals and pays particular regard to methods, which are relevant for automated visual inspection.

Optik Eugene Hecht.2018-03-19 Leser schätzen dieses Lehrbuch vor allem wegen seines ausgewogenen didaktischen Konzepts. Leicht verständlich erklärt es die Mathematik der Wellenbewegung, behandelt ausführlich die klassischen und modernen Methoden der Optik und erkundet die Neuerungen und großen Entwicklungen bei z.B. Laser, Faseroptik, Holographie, Fourier-Optik und nichtlineare Optik. Ziel des Autors ist dabei, die Optik im Rahmen einiger weniger, übergreifender Konzepte zu vereinheitlichen, so dass Studierende ein in sich geschlossenes, zusammenhängendes Bild erhalten. Abgerundet wird das Buch durch zahlreiche, didaktisch hervorragend aufbereitete Abbildungen und viele aktuelle Fotos. Über 800 Übungsaufgaben verschiedener Schwierigkeitsgrade, die zu einem großen Teil mit vollständigen Lösungen vorliegen, ermöglichen dem Studierenden, sein Wissen selbständig zu überprüfen. Über

750 Abbildungen und über 800 Übungsaufgaben verschiedener Schwierigkeitsgrade, meist mit ausführlichen Lösungen. Das Standardwerk der Optik seit über 25 Jahren. Umfangreich wie kein zweites Buch, von der Ausbreitung des Lichts bis zur Überlagerung von Wellen.

Naturgemässe Ordnung Holger Helbig.2004 Die Farbenlehre Goethes, nach eigenem Ermessen sein wichtigstes Buch, lässt sich als Abfolge von Lehrbuch, Streitschrift und geschichtlicher Abhandlung verstehen. Im Zentrum der Studie von Holger Helbig steht der didaktische Teil, wobei vor allem untersucht wird, auf welche Weise und mit welcher Absicht Goethe sein Wissen zu vermitteln suchte. Die Analyse wird durch Material über wichtige physikalische Lektüren Goethes ergänzt, das zeigt, was er alles hätte wissen können und welches Wissen bei den zeitgenössischen Lesern voraussetzen war. Daraus erklärt sich auch das Unverständnis, auf das Goethe mit seinen Ausführungen bei den Zeitgenossen stieß. Goethes Rückgriff auf Vorarbeiten anderer Wissenschaftler und die Art der Präsentation eigener Forschungsergebnisse gewähren Aufschluss über sein Wissenschaftsverständnis, welches hier insbesondere hinsichtlich der Durchführung und Dokumentation von Experimenten sowie der Systematisierung des neu gewonnenen Wissens betrachtet wird.

Physics Eugene Hecht.2000-02 In Hecht's groundbreaking book, you'll find real-life applications, and unparalleled art and photography program, a presentation that anticipates students' questions, and an approach that emphasizes contemporary physics while interweaving historical perspectives. Hecht's coverage of classical physics is exceptionally clear and insightful. He shows students how 20th-century physics illuminates the classical topics of each chapter, adding excitement to the subject matter. Approximately 1,300 illustrations make it possible for students to visualize a diversity of physical phenomena. Many of these are multi-frame, sequential drawings allowing students to comprehend the temporal unfolding of complex events. A selection of sketch art teaches students how to create problem-solving diagrams.

Image-Based Architecture Philipp Reinfeld.2018-01-16 Welches entwurfliche Potenzial bergen fotografische Bilder, wenn sie als aktives Medium architektonischer Raumproduktion verwendet werden? Mit der massenhaften Verbreitung von Kamertechnik im Smartphone hat sich die Amateurfotografie in den letzten Jahren mehr und mehr zu einer eigenen Kommunikationsform gewandelt. Der fotografische Zugang zur Welt zielt heute weniger auf die Bezeugung von etwas vormals Geschehenem ab als vielmehr auf eine laufend sich wiederholende, visuelle Veräußerung eigenen Handelns im Hier und Jetzt. In gleicher Weise wie frühere Formen bildlich-perspektivischer Raumrepräsentationen Einfluss hatten auf die Konstitution räumlicher Gestaltgebung, beginnen auch die neuen fotografischen Bildwelten die Architekturproduktion im Sinne eines Übersprungs bildlicher Logik in räumliche Materialisierungen spezifisch zu bestimmen. Auf Grundlage einer medientheoretischen Einordnung historischer wie aktueller Wechselwirkungen zwischen Kamerabildern und Raumgestaltung werden Strategien vorgestellt, wie die Fotografie sich zu einem Medium des architektonischen Entwerfens entwickeln lässt. Eine Vielzahl experimenteller Projektbeispiele, die im Rahmen einer forschenden Lehre am Institut für Mediales Entwerfen der TU Braunschweig entstanden sind, werden den theoretischen Betrachtungen zur Seite gestellt.

Wandlung von Vakuumenergie elektromagnetischer Nullpunktsoszillationen in klassische

mechanische Energie Claus Wilhelm Turtur.2010-07 Ein Perpetuum mobile - das gibt es nicht. Aber bisher wenig beachtete Energiequellen - die gibt es doch. Gemeint sind Energiequellen, die bisher derart wenig erforscht sind, dass die Menschheit noch nicht gelernt hat, sie zu nutzen. Der größte Teil des Universums besteht aus solcher Energie. Ein Teil davon findet sich in den Nullpunktsoszillationen des Quantenvakuums, also des leeren Raumes aus Sicht der Quantenphysik. Schon im Jahre 1891 hat Nikola Tesla vor dem amerikanischen Institute of Electrical Engineering über die Nutzung der Energie des leeren Raumes gesprochen. Bereits die Väter der Quantentheorie in den 1920er und 1930er Jahren konnten die sog. Nullpunktsoszillationen als einen wesentlichen Anteil dieser Energie identifizieren. Trotzdem hat lange Zeit niemand die Nutzung dieser Energie erforscht, obwohl die Menschheit nach Energie geradezu hungert. Erst gegen Ende des 20. Jahrhunderts, also fast 100 Jahre nach Tesla, beginnt die Erkundung dieses schier unerschöpflichen Energiereservoirs, welches überdies auch noch den Vorteil hat, bei seiner Nutzung keinerlei Belastung der Umwelt auch nur im geringsten erkennen zu lassen. Dabei ist die Erforschung dieser Energiequelle wichtig und eilig, alleine schon im Interesse unseres Lebensraums, unserer Erde. Der Autor des vorliegenden Buches ist selbst Wissenschaftler (Physiker) und hat eines der wenigen heute diskutierten Verfahren zur Wandlung von Vakuumenergie in klassische mechanische Energie zuerst theoretisch entwickelt und anschließend experimentell nachgewiesen. Auch wenn bisher im Labor nur eine Leistung von 150 NanoWatt erzielt werden konnte, so ist der Weg zur Nutzung der Vakuumenergie doch erfunden. Der hier dargestellte Weg spielt eine Vorreiterrolle. Er wird im vorliegenden Buch detailliert wissenschaftlich beschrieben und mit anderen bekannten Vorschlägen zu möglichen Verfahren verglichen. Die fundamentale Physik des Prinzips ist nun erkannt. Der nächste Forschungsschritt muß eine Erhöhung der erze

Stereo vision-based road condition monitoring Brunken, Hauke.2021-05-12 When planning road construction measures, it is essential to have up-to-date information on road conditions. If this information is not to be obtained manually, it is currently obtained using laser scanners mounted on mobile mapping vehicles, which can measure the 3D road profile. However, a large number of mobile mapping vehicles would be necessary to record an entire road network on a regular basis. Since 2D road damages can be found automatically on monocular camera images, the idea was born to use a stereo camera system to capture the 3D profile of roads. With stereo camera systems, it would be possible to equip a large number of vehicles and regularly collect data from large road networks. In this thesis, the potential applications of a stereo camera system for measuring road profiles, which is mounted behind the windshield of a vehicle, are investigated. Since this requires a calibration of the stereo camera system, but the effort for the user should be kept low, the camera self-calibration for this application is also examined. 3D reconstruction from stereoscopic images is a well-studied topic, but its application on road surfaces with little and repetitive textures requires special algorithms. For this reason, a new stereo method was developed. It is based on the plane-

sweep approach in combination with semi-global matching. It was tested with different measures for pixel comparison. Furthermore, the plane-sweep approach was implemented in a neural network that solves the stereo correspondence problem in a single step. It uses the stereoscopic images as input and provides an elevation image as output. A completely new approach was developed for the self-calibration of mono cameras and stereo camera systems. Previous methods search for feature points in several images of the same scene. The points are matched between the images and used for the calibration. In contrast to these methods, the proposed method uses feature maps instead of feature points to compare multiple views of one and the same plane. To estimate the unknown parameters, the backpropagation algorithm is used together with the gradient descent method. The measurements obtained by stereoscopic image processing were compared with those obtained by industrial laser scanners. They show that both measurements are very close to each other and that a stereoscopic camera system is in principle suitable for capturing the surface profile of a road. Experiments show that the proposed self-calibration method is capable of estimating all parameters of a complex camera model, including lens distortion, with high precision. Bei der Planung von Straßenbaumaßnahmen ist es unabdingbar, über aktuelle Informationen über den Straßenzustand zu verfügen. Sollen diese Informationen nicht manuell gewonnen werden, werden derzeit Messfahrzeuge mit Laserscannern verwendet, welche das 3D-Straßenprofil vermessen können. Für die regelmäßige Erfassung eines gesamten Straßennetzes wäre jedoch eine große Anzahl von Messfahrzeugen erforderlich. Da 2D-Straßenschäden automatisch auf monokularen Kamerabildern gefunden werden können, entstand die Idee, ein Stereokamerasystem zur Erfassung des 3D-Profiles zu verwenden. Eine große Anzahl von Fahrzeugen könnte damit ausgerüstet werden und es könnten regelmäßig Daten von großen Straßennetzen erfasst werden. In dieser Arbeit werden die Einsatzmöglichkeiten eines Stereokamerasystems zur Messung von Straßenprofilen untersucht, das sich hinter der Windschutzscheibe eines Fahrzeugs befindet. Da hierzu das Stereokamerasystem kalibriert sein muss, der Aufwand für den Anwender aber geringgehalten werden soll, wird außerdem die Selbstkalibrierung für diesen Einsatzzweck untersucht. Die 3D-Rekonstruktion aus stereoskopischen Bildern ist ein viel untersuchtes Thema, aber ihre Anwendung auf Straßenoberflächen mit wenig und sich wiederholenden Texturen erfordert spezielle Algorithmen. Aus diesem Grund wurde ein neues Stereoverfahren entwickelt. Es basiert auf dem Plane-sweep-Ansatz in Kombination mit Semi-global Matching. Es wurde mit verschiedenen Maßen für den Vergleich von Pixeln getestet. Darüber hinaus wurde der Plane-sweep-Ansatz in einem neuronalen Netzwerk implementiert, das das Stereo-Korrespondenzproblem in einem einzigen Schritt löst. Es verwendet die stereoskopischen Bilder als Eingabe und liefert als Ausgabe ein Höhenbild. Für die Selbstkalibrierung von Monokameras und Stereokamerasystemen wurde ein völlig neuer Ansatz entwickelt. Bisherige Methoden suchen nach Merkmalspunkten in mehreren Bildern der gleichen Szene. Die Punkte werden zwischen den Bildern zugeordnet und für die Kalibrierung verwendet. Die vorgeschlagene Methode verwendet anstelle von Merkmalspunkten Feature-Maps um mehrere Ansichten derselben Ebene zu vergleichen. Zur Schätzung der unbekannt Parameter wird der Backpropagation-Algorithmus zusammen mit dem Gradientenabstiegsverfahren verwendet. Die durch stereoskopische Bildverarbeitung erhaltenen Messungen wurden mit Messungen von industriellen Laserscannern verglichen. Sie zeigen, dass beide sehr nahe beieinander liegen und dass ein Stereokamerasystem für die Erfassung des Oberflächenprofils einer Straße grundsätzlich geeignet ist. Experimente zeigen, dass die neue Selbstkalibrierungsmethode in der Lage ist, alle Parameter eines komplexen Kameramodells, einschließlich der Linsenverzerrung, mit hoher Präzision abzuschätzen.

Wave Optical Simulations of X-ray Nano-focusing Optics Markus Osterhoff.2012 Curved x-ray multilayer mirrors focus synchrotron beams down to tens of nano metres. A wave-optical theory describing propagation of two waves in an elliptically curved focusing multilayer mirror is developed in this thesis. Using numerical integration, the layer shapes can be optimised for reflectivity and aberrations. Within this framework, performance of both existing and currently upgraded synchrotron beamlines is simulated. Using a more theoretical model case, limits of the theory are studied. A significant part of this work is dedicated to partial spatial coherence, modelled using the method of stochastic superpositions. Coherence propagation and filtering by x-ray waveguides is shown analytically and numerically. This comprehensive model is put forward that shall help in development and testing of new algorithms for a variety of imaging techniques using coherent x-ray beams. Advanced simulations accounting for real structure effects are compared to experimental data obtained at the GINIX instrument at the coherence beamline P10 at PETRA III, DESY. This thesis presents results of a collaboration between the Georg-August-Universität Göttingen and the European Synchrotron Radiation Facility (ESRF) Grenoble.
