This very useful book will be extremely welcome to in-house counsel who must evaluate the legal disposition of a proposed or pending construction contract subject to the laws of a foreign jurisdiction. It will continue to be of service as long as the project proceeds and beyond, particularly for the optimal resolution of disputes.

**Hydraulic and Civil Engineering Technology VII** M. Yang, J.C.G. Lanzinha, P. Samui. 2022-12-23 Engineering technology is of crucial importance to the infrastructure on which modern societies depend, and keeping abreast of the latest research and developments in the field is of vital importance. This book presents the proceedings of HCET 2022, the 7th International Technical Conference on Frontiers of Hydraulic and Civil Engineering Technology, originally due to be held, in Sanya, China, from 25-27 September 2022, but instead held as a fully virtual event on Zoom due to continued uncertainty related to the Covid 19 pandemic. HCET is a platform for the dissemination of research results on the latest advances in the areas of hydraulic and civil engineering technology and environmental engineering, and provides an opportunity for scientists, researchers and engineers from around the world to exchange their findings, discuss developments, and possibly establish a basis for collaboration. A total of 275 submissions were received from international contributors, and all were subjected to a rigorous peer-review process, with each paper reviewed by a minimum of two experts. Papers were also checked for quality and plagiarism, after which, 163

papers were accepted for presentation and publication. Topics covered include the research and development of concrete structure design and analysis, structural mechanics and structural engineering, geological exploration and earthquake engineering, building technology, urban planning, energy, environment and advanced engineering science and applications. The book offers a state-of-the-art overview of recent developments, and will be of interest to all those working in the fields of hydraulic and civil engineering technology.

China's New Silk Road Dreams Noesselt Nele.2021-01-25 The contributions compiled in this issue engage in critical evaluation of China's New Silk Road initiative (Belt and Road Initiative [BRI]) by focusing on the potential long-term political and economic effects and implications for Sino-European and Sino-African relations. The authors take the launching of the BRI (October 2013) as a starting point for a general, theory-guided qualitative re-evaluation of the basic patterns of Chinese foreign relations and global interactions under the fifth generation of Chinese political leaders. In 2013, the Chinese state president, Xi Jinping, framed BRI as a global connectivity network consisting of a multitude of overland passages and maritime transportation corridors. Xi Jinping's report to the 19th Party Congress (2017) set the BRI as an anchor concept of China's fine-tuned foreign strategy in the 21st century.

Recommendations for Standards in Hydraulics American Society of Civil Engineers. Task Committee on Recommendations for Standards in Hydraulics.1994-01-01 This committee report surveys the current awareness, use, and usefulness of existing U.S. and international hydraulics standards and guides for practicing engineers. Composed largely from the responses to the committee's questionnaire, the report also addresses the question of whether additional standards and guides in hydraulics should be prepared. Prediction of scour at bridge piers; design of pump intakes and sumps; and calculations of friction and form losses in closed conduits are among the technical areas

that guidelines or standards are recommended.--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

**Wind Loading of Structures** John D. Holmes.2007-04-17 Bridging the gap between wind and structural engineering, *Wind Loading of Structures* demonstrates the application of wind engineering principles to ensure maximum safety in a variety of structures. This book will assist the practising engineer in understanding the principles of wind engineering, and provide guidance on the successful design of structures for wind loading by gales, hurricanes, typhoons, thunderstorm

downdrafts and tornados. The principles of meteorology, statistics and probability, aerodynamics and structural dynamics are covered in the first half of the book. The second half describes, qualitatively and quantitatively, the nature of wind loads on all types of structures, including low-rise and tall buildings, large stadium roofs, towers and chimneys, bridges, transmission lines, free-standing walls and roofs, and antennae. Special features include coverage of extreme winds in tropical and sub-tropical climates, wind-tunnel testing techniques, a summary of the wind climates of over sixty countries, and detailed coverage of internal as well as external wind pressures on buildings. A comparison is made of the provisions for wind loads in six major national and international codes and standards. Examples and case studies are given in each chapter that make the book suitable for supporting university graduate courses in wind loading and response.
