

The Third Chimpanzee For Young People On The Evol

1493 for Young People Charles Mann.2016-01-26 1493 for Young People by Charles C. Mann tells the gripping story of globalization through travel, trade, colonization, and migration from its beginnings in the fifteenth century to the present. How did the lowly potato plant feed the poor across Europe and then cause the deaths of millions? How did the rubber plant enable industrialization? What is the connection between malaria, slavery, and the outcome of the American Revolution? How did the fabled silver mountain of sixteenth-century Bolivia fund economic development in the flood-prone plains of rural China and the wars of the Spanish Empire? Here is the story of how sometimes the greatest leaps also posed the greatest threats to human advancement. Mann's language is as plainspoken and clear as it is provocative, his research and erudition vast, his conclusions ones that will stimulate the critical thinking of young people. 1493 for Young People provides tools for wrestling with the most pressing issues of today, and will empower young people as they struggle with a changing world.

Grandmother Fish Jonathan Tweet.2016-09-06 Where did we come from? It's a simple question, but not so simple an answer to explain—especially to young children. Charles Darwin's theory of common descent no longer needs to be a scientific mystery to inquisitive young readers. Meet Grandmother Fish. Told in an engaging call and response text where a child can wiggle like a fish or

hoot like an ape and brought to life by vibrant artwork, Grandmother Fish takes children and adults through the history of life on our planet and explains how we are all connected. The book also includes comprehensive backmatter, including: - An elaborate illustration of the evolutionary tree of life - Helpful science notes for parents - How to explain natural selection to a child

Chimpanzee Politics Frans B. M. Waal.2000-04-10 The first edition of Frans de Waal's Chimpanzee Politics was acclaimed not only by primatologists for its scientific achievement but also by a much broader audience of politicians, business leaders, and social psychologists for its remarkable insights into very basic human needs and behaviors. In this revised edition—featuring a new gallery of color photographs along with a new introduction and epilogue—de Waal expands and updates his story of the Arnhem colony and its continuing political upheavals. We learn the fate of many memorable chimpanzees and meet the colony's current leaders and their allies. The new edition remains a detailed and thoroughly engrossing account—of sexual rivalries and coalitions, of actions governed by intelligence rather than instinct—and it reaffirms the complex bond between humans and their closest living relatives. As we watch the chimpanzees of Arnhem behave in ways we recognize from Machiavelli (and from the nightly news), de Waal reminds us again that the roots of politics are older than humanity.

The Artificial Ape Timothy Taylor.2010-07-20 A breakthrough theory that tools and technology are the real drivers of human evolution Although humans are one of the great apes, along with chimpanzees, gorillas, and orangutans, we are remarkably different from them. Unlike our cousins who subsist on raw food, spend their days and nights outdoors, and wear a thick coat of hair, humans are entirely dependent on artificial things, such as clothing, shelter, and the use of tools, and would die in nature without them. Yet, despite our status as the weakest ape, we are the

masters of this planet. Given these inherent deficits, how did humans come out on top? In this fascinating new account of our origins, leading archaeologist Timothy Taylor proposes a new way of thinking about human evolution through our relationship with objects. Drawing on the latest fossil evidence, Taylor argues that at each step of our species' development, humans made choices that caused us to assume greater control of our evolution. Our appropriation of objects allowed us to walk upright, lose our body hair, and grow significantly larger brains. As we push the frontiers of scientific technology, creating prosthetics, intelligent implants, and artificially modified genes, we continue a process that started in the prehistoric past, when we first began to extend our powers through objects. Weaving together lively discussions of major discoveries of human skeletons and artifacts with a reexamination of Darwin's theory of evolution, Taylor takes us on an exciting and challenging journey that begins to answer the fundamental question about our existence: what makes humans unique, and what does that mean for our future?

The Chimpanzees I Love Jane Goodall.2001 As a child, Jane Goodall dreamed of living with the wild animals of Africa. As a young woman, she amazed the world with her groundbreaking discoveries about chimpanzees, which she documented in her acclaimed National Geographic television specials. Ever since, Dr. Goodall has campaigned unceasingly for the protection of the chimpanzee now an endangered species. This moving, personal account will inspire readers of all ages to join in her vital work.

The Rise and Fall of the Third Chimpanzee Jared M. Diamond.1991

What's the Point of School? Guy Claxton.2013-10-01 Why the education system is failing our kids and how we can start the revolution that will save our schools With their emphasis on regurgitated knowledge and stressful exams, today's schools actually do more harm than good. Guiding readers

past the sterile debates about City Academies and dumbed-down exams, Claxton proves that education's key responsibility should be to create enthusiastic learners who will go on to thrive as adults in a swiftly-changing, dynamic world. Students must be encouraged to sharpen their wits, ask questions, and think for themselves - all without chucking out Shakespeare or the Periodic Table. Blending down-to-earth examples with the latest advances in brain science, and written with passion, wit, and authority, this brilliant book will inspire teachers, parents, and readers of all backgrounds to join a practical revolution and foster in the next generation a natural curiosity and the spirit of adventure.

The Third Chimpanzee Jared M. Diamond.1992 The Development of an Extraordinary Species We human beings share 98 percent of our genes with chimpanzees. Yet humans are the dominant species on the planet -- having founded civilizations and religions, developed intricate and diverse forms of communication, learned science, built cities, and created breathtaking works of art -- while chimps remain animals concerned primarily with the basic necessities of survival. What is it about that two percent difference in DNA that has created such a divergence between evolutionary cousins? In this fascinating, provocative, passionate, funny, endlessly entertaining work, renowned Pulitzer Prize winning author and scientist Jared Diamond explores how the extraordinary human animal, in a remarkably short time, developed the capacity to rule the world . . . and the means to irrevocably destroy it.

What It Means to Be 98% Chimpanzee Jonathan Marks.2003-11 Focusing on the remarkable similarity between chimp and human DNA, the author explores the role of molecular genetics, anthropology, biology, and psychology in the human-ape relationship.

Chimpanzee Material Culture William Clement McGrew.1992-10-22 The implications of tool-use

behaviour in chimpanzees for reconstructing the evolutionary origins of human culture are discussed in this book.

Why Evolution is True Jerry A. Coyne.2010-01-14 For all the discussion in the media about creationism and 'Intelligent Design', virtually nothing has been said about the evidence in question - the evidence for evolution by natural selection. Yet, as this succinct and important book shows, that evidence is vast, varied, and magnificent, and drawn from many disparate fields of science. The very latest research is uncovering a stream of evidence revealing evolution in action - from the actual observation of a species splitting into two, to new fossil discoveries, to the deciphering of the evidence stored in our genome. Why Evolution is True weaves together the many threads of modern work in genetics, palaeontology, geology, molecular biology, anatomy, and development to demonstrate the 'indelible stamp' of the processes first proposed by Darwin. It is a crisp, lucid, and accessible statement that will leave no one with an open mind in any doubt about the truth of evolution.

An Indigenous Peoples' History of the United States for Young People Roxanne Dunbar-Ortiz.2019-07-23 2020 American Indian Youth Literature Young Adult Honor Book 2020 Notable Social Studies Trade Books for Young People,selected by National Council for the Social Studies (NCSS) and the Children's Book Council 2019 Best-Of Lists: Best YA Nonfiction of 2019 (Kirkus Reviews) · Best Nonfiction of 2019 (School Library Journal) · Best Books for Teens (New York Public Library) · Best Informational Books for Older Readers (Chicago Public Library) Spanning more than 400 years, this classic bottom-up history examines the legacy of Indigenous peoples' resistance, resilience, and steadfast fight against imperialism. Going beyond the story of America as a country "discovered" by a few brave men in the "New World," Indigenous human rights advocate Roxanne

Dunbar-Ortiz reveals the roles that settler colonialism and policies of American Indian genocide played in forming our national identity. The original academic text is fully adapted by renowned curriculum experts Debbie Reese and Jean Mendoza, for middle-grade and young adult readers to include discussion topics, archival images, original maps, recommendations for further reading, and other materials to encourage students, teachers, and general readers to think critically about their own place in history.

A Dog in the Cave Kay Frydenborg. 2017-03-14 “A compelling look at the origins of and the ongoing unique relationship between humans and dogs . . . [a] lively blend of science and history.”—Kirkus Reviews (starred review) We know dogs are our best animal friends, but have you ever thought about what that might mean? Fossils show we’ve shared our work and homes with dogs for tens of thousands of years. Now there’s growing evidence that we influenced dogs’ evolution—and they, in turn, changed ours. Even more than our closest relatives, the apes, dogs are the species with whom we communicate best. Combining history, paleontology, biology, and cutting-edge medical science, Kay Frydenborg paints a picture of how two different species became deeply entwined—and how we coevolved into the species we are today. “Narrative nonfiction at its best—high interest and engaging, with meaty interdisciplinary science exploration. A top choice for tweens and teens.”—School Library Journal (starred review) “This narrative blend of history and science belongs on all shelves.”—Booklist (starred review) “A fascinating study of the ways in which a relationship with canines has been pivotal to humanity’s development . . . Sidebars and color photographs supplement and expand on the central narrative, which is all but certain to leave readers thinking about their dogs, and themselves, in entirely new ways.”—Publishers Weekly “Evident throughout [A Dog in the Cave] are the author’s passion and curiosity.”—The Horn Book

Origins Reconsidered Richard E. Leakey.1993-10-01 Richard Leakey's personal account of his fossil hunting and landmark discoveries at Lake Turkana, his reassessment of human prehistory based on new evidence and analytic techniques, and his profound pondering of how we became human and what being human really means.

The Third Chimpanzee Jared Diamond.2014-09-04 The Third Chimpanzee was first published in 1991 and has been in print ever since. This new, illustrated edition is aimed at a young readership. In it, Jared Diamond explores what makes us human and poses fascinating questions. If we share more than 98% of our DNA with chimpanzees, how is it that we can write, read, talk, build telescopes and bombs, while we put our speechless and bomb-less close relatives in cages and zoos? What can woodpeckers teach us about spacecraft? Is genocide a human invention? Why does extinction matter? Why are we destroying the natural resources on which we depend for survival? What hope is there for future generations? Not only is The Third Chimpanzee a mind-boggling survey of how we came to be, but it is also a plea to the next generation to make better decisions than their parents and get us out of the mess we're in.

The Rise and Fall of the Third Chimpanzee Jared M. Diamond.1991 More than 98 per cent of human genes are shared with the two species of chimpanzee. The 'third' chimpanzee is man. Jared Diamond surveys our life-cycle, culture, sexuality and destructive urges both towards ourselves and the planet, to explore the ways in which we are uniquely human yet still influenced by our animal origins. Book jacket.

A Young People's History of the United States Howard Zinn.2011-01-04 A Young People's History of the United States brings to US history the viewpoints of workers, slaves, immigrants, women, Native Americans, and others whose stories, and their impact, are rarely included in books

for young people. A Young People's History of the United States is also a companion volume to The People Speak, the film adapted from A People's History of the United States and Voices of a People's History of the United States. Beginning with a look at Christopher Columbus's arrival through the eyes of the Arawak Indians, then leading the reader through the struggles for workers' rights, women's rights, and civil rights during the nineteenth and twentieth centuries, and ending with the current protests against continued American imperialism, Zinn in the volumes of A Young People's History of the United States presents a radical new way of understanding America's history. In so doing, he reminds readers that America's true greatness is shaped by our dissident voices, not our military generals.

The World Until Yesterday Jared Diamond. 2012-12-31 The bestselling author of *Collapse* and *Guns, Germs and Steel* surveys the history of human societies to answer the question: What can we learn from traditional societies that can make the world a better place for all of us? "As he did in his Pulitzer Prize-winning *Guns, Germs, and Steel*, Jared Diamond continues to make us think with his mesmerizing and absorbing new book. Most of us take for granted the features of our modern society, from air travel and telecommunications to literacy and obesity. Yet for nearly all of its six million years of existence, human society had none of these things. While the gulf that divides us from our primitive ancestors may seem unbridgeably wide, we can glimpse much of our former lifestyle in those largely traditional societies still or recently in existence. Societies like those of the New Guinea Highlanders remind us that it was only yesterday—in evolutionary time—when everything changed and that we moderns still possess bodies and social practices often better adapted to traditional than to modern conditions. *The World Until Yesterday* provides a mesmerizing firsthand picture of the human past as it had been for millions of years—a past that has mostly

vanished—and considers what the differences between that past and our present mean for our lives today. This is Jared Diamond's most personal book to date, as he draws extensively from his decades of field work in the Pacific islands, as well as evidence from Inuit, Amazonian Indians, Kalahari San people, and others. Diamond doesn't romanticize traditional societies—after all, we are shocked by some of their practices—but he finds that their solutions to universal human problems such as child rearing, elder care, dispute resolution, risk, and physical fitness have much to teach us. Provocative, enlightening, and entertaining, *The World Until Yesterday* is an essential and fascinating read.

Becoming Human Ian Tattersall.1999 Explores the evolution of humankind--who we are, where we came from, and where we are going.

Freedom Summer For Young People Bruce Watson.2020-11-03 This latest edition in Triangle

Square's For Young People series is a gripping account of the summer that changed America. In the summer of 1964, as the Civil Rights movement boiled over, the Student Nonviolent Coordinating Committee (SNCC) sent more than seven hundred college students to Mississippi to help black Americans already battling for democracy, their dignity and the right to vote. The campaign was called "Freedom Summer." But on the evening after volunteers arrived, three young civil rights workers went missing, presumed victims of the Ku Klux Klan. The disappearance focused America's attention on Mississippi. In the days and weeks that followed, volunteers and local black activists faced intimidation, threats, and violence from white people who didn't believe African Americans should have the right to vote. As the summer unfolded, volunteers were arrested or beaten. Black churches were burned. More Americans came to Mississippi, including doctors, clergymen, and Martin Luther King. A few frightened volunteers went home, but the rest stayed on in Mississippi, teaching in Freedom Schools, registering voters, and living with black people as equals. Freedom Summer brought out the best and the worst in America. The story told within these pages is of everyday people fighting for freedom, a fight that continues today. Freedom Summer for Young People is a riveting account of a decisive moment in American history, sure to move and inspire readers.

The Ancestor's Tale Richard Dawkins.2004 A renowned biologist provides a sweeping chronicle of more than four billion years of life on Earth, shedding new light on evolutionary theory and history, sexual selection, speciation, extinction, and genetics.

The Human Evolution Coloring Book, 2e Coloring Concepts Inc..2001-02-06 The completely revised Human Evolution Coloring Book Provides an authoritative, scientific background for understanding the origins of humanity Includes new discoveries and information essential for students of

anthropology, primatology, paleontology, comparative anatomy, and genetics Brings together evidence from living primates, fossils, and molecular studies Explains the latest dating methods, including radioactive, paleomagnetic, and molecular clocks Surveys the world of living primates, their ecology, locomotion, diet, behavior, and life histories Clarifies the anatomical and behavioral similarities and differences between ourselves and our closest living relatives, the chimpanzee and the gorilla Resolves some long-standing mysteries about our relationship to the extinct Neanderthals

The Evolution of Bruno Littlemore Benjamin Hale.2011-04-01 SHORTLISTED FOR THE DYLAN THOMAS PRIZE 2011 Bruno Littlemore; linguist, artist, philosopher. A life defined by a soaring mind, yet bound by a restrictive body. Born in down-town Chicago, Bruno's precocity pulls him from an unremarkable childhood, and under the tuition of Lydia, his intellect dazzles a watching world. But when falls in love with his mentor, the world turns on them with outrage: Bruno is striving to be something he is not, and denying everything that he is. For despite his all too human complexities, dreams and frailties, Bruno's hairy body, flattened nose and jutting brow are, undeniably, the features of a chimpanzee. Like its protagonist, this novel is big, abrasive, witty, perverse, earnest and accomplished. The Evolution of Bruno Littlemore goes beyond satire by showing us not what it means, but what it feels like be human - to love and lose, learn, aspire, grasp, and, in the end, to fail.

Apes and Human Evolution Russell H. Tuttle.2014-02-17 Russell Tuttle synthesizes a vast literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why humans became a bipedal, tool-making, culture-inventing species distinct from other hominoids. He refutes the theory that we are sophisticated, instinctively aggressive and destructive killer apes.

Human Evolution Robin Dunbar.2014-05-01 What makes us human? How did we develop language,

thought and culture? Why did we survive, and other human species fail? The past 12,000 years represent the only time in the sweep of human history when there has been only one human species. How did this extraordinary proliferation of species come about - and then go extinct? And why did we emerge such intellectual giants? The tale of our origins has inevitably been told through the 'stones and bones' of the archaeological record, yet Robin Dunbar shows it was our social and cognitive changes rather than our physical development which truly made us distinct from other species.

Different: Gender Through the Eyes of a Primatologist Frans de Waal. 2022-04-05 “Every new book by Frans de Waal is a cause for excitement, and this one is no different. A breath of fresh air in the cramped debate about the differences between men and women. Fascinating, nuanced, and very timely.” —Rutger Bregman, author of *Humankind: A Hopeful History* In *Different*, world-renowned primatologist Frans de Waal draws on decades of observation and studies of both human and animal behavior to argue that despite the linkage between gender and biological sex, biology does not automatically support the traditional gender roles in human societies. While humans and other primates do share some behavioral differences, biology offers no justification for existing gender inequalities. Using chimpanzees and bonobos to illustrate this point—two ape relatives that are genetically equally close to humans—de Waal challenges widely held beliefs about masculinity and femininity, and common assumptions about authority, leadership, cooperation, competition, filial bonds, and sexual behavior. Chimpanzees are male-dominated and violent, while bonobos are female-dominated and peaceful. In both species, political power needs to be distinguished from physical dominance. Power is not limited to the males, and both sexes show true leadership capacities. *Different* is a fresh and thought-provoking approach to the long-running debate about the

balance between nature and nurture, and where sex and gender roles fit in. De Waal peppers his discussion with details from his own life—a Dutch childhood in a family of six boys, his marriage to a French woman with a different orientation toward gender, and decades of academic turf wars over outdated scientific theories that have proven hard to dislodge from public discourse. He discusses sexual orientation, gender identity, and the limitations of the gender binary, exceptions to which are also found in other primates. With humor, clarity, and compassion, Different seeks to broaden the conversation about human gender dynamics by promoting an inclusive model that embraces differences, rather than negating them.

The Goodness Paradox Richard W. Wrangham. 2019 Highly accessible, authoritative, and intellectually provocative, a startlingly original theory of how Homo sapiens came to be: Richard Wrangham forcefully argues that, a quarter of a million years ago, rising intelligence among our ancestors led to a unique new ability with unexpected consequences: our ancestors invented socially sanctioned capital punishment, facilitating domestication, increased cooperation, the accumulation of culture, and ultimately the rise of civilization itself. Throughout history even as quotidian life has exhibited calm and tolerance[,] war has never been far away, and even within societies violence can be a threat. The Goodness Paradox gives a new and powerful argument for how and why this uncanny combination of peacefulness and violence crystallized after our ancestors acquired language in Africa a quarter of a million years ago. Words allowed the sharing of intentions that enabled men effectively to coordinate their actions. Verbal conspiracies paved the way for planned conflicts and, most importantly, for the uniquely human act of capital punishment. The victims of capital punishment tended to be aggressive men, and as their genes waned, our ancestors became tamer. This ancient form of systemic violence was critical, not only encouraging cooperation in

peace and war and in culture, but also for making us who we are: Homo sapiens--

A Story of Us Lesley Newson, Peter Richerson. 2021-02-19 It's time for a story of human evolution that goes beyond describing ape-men and talks about what women and children were doing. In a few decades, a torrent of new evidence and ideas about human evolution has allowed scientists to piece together a more detailed understanding of what went on thousands and even millions of years ago. We now know much more about the problems our ancestors faced, the solutions they found, and the trade-offs they made. The drama of their experiences led to the humans we are today: an animal that relies on a complex culture. We are a species that can and does rapidly evolve cultural solutions as we face new problems, but the intricacies of our cultures mean that this often creates new challenges. Our species' unique capacity for culture began to evolve millions of years ago, but it only really took off in the last few hundred thousand years. This capacity allowed our ancestors to survive and raise their difficult children during times of extreme climate chaos. Understanding how this has evolved can help us understand the cultural change and diversity that we experience today. Lesley Newson and Peter Richerson, a husband-and-wife team based at the University of California, Davis, began their careers with training in biology. The two have spent years together and individually researching and collaborating with scholars from a wide range of disciplines to produce a deep history of humankind. In *A Story of Us*, they present this rich narrative and explain how the evolution of our genes relates to the evolution of our cultures. Newson and Richerson take readers through seven stages of human evolution, beginning seven million years ago with the apes that were the ancestors of humans and today's chimps and bonobos. The story ends in the present day and offers a glimpse into the future.

Why Is Sex Fun? Jared Diamond. 1998-09-25 To us humans the sex lives of many animals seem weird.

In fact, by comparison with all the other animals, we are the ones with the weird sex lives. How did that come to be? Just count our bizarre ways. We are the only social species to insist on carrying out sex privately. Stranger yet, we have sex at any time, even when the female can't be fertilized (for example, because she is already pregnant, post-menopausal, or between fertile cycles). A human female doesn't know her precise time of fertility and certainly doesn't advertise it to human males by the striking color changes, smells, and sounds used by other female mammals. Why do we differ so radically in these and other important aspects of our sexuality from our closest ancestor, the apes? Why does the human female, virtually alone among mammals go through menopause? Why does the human male stand out as one of the few mammals to stay (often or usually) with the female he impregnates, to help raise the children that he sired? Why is the human penis so unnecessarily large? There is no one better qualified than Jared Diamond—renowned expert in the fields of physiology and evolutionary biology and award-winning author—to explain the evolutionary forces that operated on our ancestors to make us sexually different. With wit and a wealth of fascinating examples, he explains how our sexuality has been as crucial as our large brains and upright posture in our rise to human status.

The Book of Humans Adam Rutherford. 2019-03-19 The author of *A Brief History of Everyone Who Ever Lived* investigates what it means to be human—and the ways we are (and aren't) unique among animals. We like to think of ourselves as exceptional beings, but are we really more special than other animals? In this original and entertaining tour of life on Earth, Adam Rutherford explores how many of the things once considered to be exclusively human are not: We are not the only species that communicates, makes tools, uses fire, or has sex for reasons other than procreation. Evolution has, however, allowed us to develop a culture far more complex than any other observed in nature.

The Book of Humans explains how we became the creatures we are today, uniquely able to investigate ourselves. Illuminating the latest genetic research, it is a thrilling account of what unequivocally fixes us as animals—and what makes us truly extraordinary.

In the Light of Evolution National Academy of Sciences.2007 The Arthur M. Sackler Colloquia of the National Academy of Sciences address scientific topics of broad and current interest, cutting across the boundaries of traditional disciplines. Each year, four or five such colloquia are scheduled, typically two days in length and international in scope. Colloquia are organized by a member of the Academy, often with the assistance of an organizing committee, and feature presentations by leading scientists in the field and discussions with a hundred or more researchers with an interest in the topic. Colloquia presentations are recorded and posted on the National Academy of Sciences Sackler colloquia website and published on CD-ROM. These Colloquia are made possible by a generous gift from Mrs. Jill Sackler, in memory of her husband, Arthur M. Sackler.

Chimpanzees and Human Evolution Martin N. Muller.2017-11-27 Knowledge of wild chimpanzees has expanded dramatically. This volume, edited by Martin Muller, Richard Wrangham, and David Pilbeam, brings together scientists who are leading a revolution to discover and explain human uniqueness, by studying our closest living relatives. Their conclusions may transform our understanding of human evolution.

The Evolution of Human Sexuality Donald Symons.1979-08-30 Anthropology, Sexual Studies, Psychology, Sociology, Gender and Cultural Studies

Natural Experiments of History Jared Diamond.2012-11-01 In eight case studies by leading scholars in history, archaeology, business, economics, geography, and political science, the authors showcase the “natural experiment” or “comparative method”—well-known in any science concerned

with the past—on the discipline of human history. That means, according to the editors, “comparing, preferably quantitatively and aided by statistical analyses, different systems that are similar in many respects, but that differ with respect to the factors whose influence one wishes to study.” The case studies in the book support two overall conclusions about the study of human history: First, historical comparisons have the potential for yielding insights that cannot be extracted from a single case study alone. Second, insofar as is possible, when one proposes a conclusion, one may be able to strengthen one’s conclusion by gathering quantitative evidence (or at least ranking one’s outcomes from big to small), and then by testing the conclusion’s validity statistically.

What is Life? Addy Pross. 2012-09-27 Seventy years ago, Erwin Schrödinger posed a profound question: 'What is life, and how did it emerge from non-life?' This problem has puzzled biologists and physical scientists ever since. Living things are hugely complex and have unique properties, such as self-maintenance and apparently purposeful behaviour which we do not see in inert matter. So how does chemistry give rise to biology? What could have led the first replicating molecules up such a path? Now, developments in the emerging field of 'systems chemistry' are unlocking the problem. Addy Pross shows how the different kind of stability that operates among replicating molecules results in a tendency for chemical systems to become more complex and acquire the properties of life. Strikingly, he demonstrates that Darwinian evolution is the biological expression of a deeper, well-defined chemical concept: the whole story from replicating molecules to complex life is one continuous process governed by an underlying physical principle. The gulf between biology and the physical sciences is finally becoming bridged. This new edition includes an Epilogue describing developments in the concepts of fundamental forms of stability discussed in the book, and their profound implications. Oxford Landmark Science books are 'must-read' classics of modern science

writing which have crystallized big ideas, and shaped the way we think.

The Story of Evolution in 25 Discoveries Donald R. Prothero.2020-12-22 The theory of evolution unites the past, present, and future of living things. It puts humanity's place in the universe into necessary perspective. Despite a history of controversy, the evidence for evolution continues to accumulate as a result of many separate strands of amazing scientific sleuthing. In *The Story of Evolution in 25 Discoveries*, Donald R. Prothero explores the most fascinating breakthroughs in piecing together the evidence for evolution. In twenty-five vignettes, he recounts the dramatic stories of the people who made crucial discoveries, placing each moment in the context of what it represented for the progress of science. He tackles topics like what it means to see evolution in action and what the many transitional fossils show us about evolution, following figures from Darwin to lesser-known researchers as they unlock the mysteries of the fossil record, the earth, and the universe. The book also features the stories of animal species strange and familiar, including humans—and our ties to some of our closest relatives and more distant cousins. Prothero's wide-ranging tales showcase awe-inspiring and bizarre aspects of nature and the powerful insights they give us into the way that life works. Brisk and entertaining while firmly grounded in fundamental science, *The Story of Evolution in 25 Discoveries* is a captivating read for anyone curious about the evidence for evolution and what it means for humanity.

The Third Chimpanzee Jared M. Diamond.2006-01-03 The Development of an Extraordinary Species We human beings share 98 percent of our genes with chimpanzees. The Third Chimpanzee for Young People Jared Diamond.2014-10-07 At some point during the last 100,000 years, humans began exhibiting traits and behavior that distinguished us from other animals, eventually creating language, art, religion, bicycles, spacecraft, and nuclear weapons—all within a heartbeat of evolutionary time. Now, faced with the threat of nuclear weapons and the effects of climate change, it seems our innate tendencies for violence and invention have led us to a crucial fork in our road. Where did these traits come from? Are they part of our species immutable destiny? Or is there hope for our species' future if we change? With fascinating facts and his unparalleled readability, Diamond intended his book to improve the world that today's young people will inherit. Triangle Square's *The Third Chimpanzee for Young People* is a book for future generation and the future they'll help build.
