

F 22 Raptor

F-22 Raptor Megan Cooley Peterson.2019 Soar through the stats and descriptions on the F-22 Raptor, a powerful military fighter jet.

F/A-22 Raptor Christopher Bolkcom.2003 The F/A-22 Raptor is a next-generation fighter/attack aircraft that features the latest stealth technology to reduce detection by radar. Using more advanced engines and avionics than the current F-15 Eagle, the F/A-22 is intended to maintain U.S. Air Force capabilities against more sophisticated aircraft and missiles in the 21st century. This report examines the Air Force's F/A-22 Raptor program, including costs and schedule; considers several key issues; and concludes with a synopsis of recent legislative activity the program. In 1986 two contractors were selected to build competing prototypes, Lockheed's YF-22 and Northrop's YF-23, which were flight tested in late 1990. In April 1991, the Air Force selected Lockheed's YF-22 design for full-scale development, now termed System Development and Demonstration (SDD). The aircraft is powered by Pratt & Whitney's F119 engine, selected in competition with General Electric's F120 engine. If produced as now projected, F/A-22s could begin replacing F-15s after 2005. Through FY2004 Congress provided some \$41 billion for the F/A-22. A 279-aircraft program was estimated by DoD in June 2004 to cost about \$72 billion in actual prior-year and projected out-year expenditures. The Administration's FY2005 budget requested \$4.8 billion for the F/A-22 program in procurement and development funds. Appropriators reduced this request by \$40 million. The F/A-22 has had strong congressional support, although some have criticized the program on grounds of cost, requirements, and coordination with other tactical aircraft programs. Some question the urgency of procuring of the F/A-22 when production of comparable or

better aircraft by other countries appears unlikely. Others argue that the F/A-22 should enter production as early as possible to cope with future threats from more advanced air defenses of potential enemies and to maintain the preeminent U.S. position in aviation technology and production.

F-22 Model Glenn Hoover.2018-05-13 This book contains detailed instructions on building the F-22 Raptor 1/48 scale model aircraft from Hasegawa. A spiral bound version is available at glennhoovermodels.com You really need this book to successfully build this model. This model has over 600 kit and aftermarket parts with hundreds of decals. Can any sane modeler keep track of this build? The likelihood of you missing a part or doing a step out of order where you can't go back and fix because it's too late are high. In addition to the kit's instructions, there are 6 aftermarket kits each with their own instruction. Can you imagine merging all of these instructions? Well, I've done that for you and more. I take the model kit instructions from Hasegawa and break them up into individual steps. I reorder the steps so that the small pieces (antennas, etc.) are assembled last which reduces the risk of damage when building the model. The steps are organized to insert the paint and decal steps in the best spot. I also incorporate Eduard's Photo Etch sets 48619, 48669, 49514, and 49534 along with Hasegawa's QG39 PE set and Wolfpack's Nozzle Set in with Hasegawa's instructions. As most modelers know, it can be tricky to go back and forth between the model kit

instructions and the aftermarket kit instructions. I took out the guess work and did that for you. The aftermarket steps are color coded making them easy to skip if you just have the basic model. This book provides a little history of the Raptor, photos of the model kit contents including the aftermarket kits, a detailed list of tools that I used to build this model, along with a list of paints. The actual instruction section contains 1208 steps and 140 plus figures over 194 pages that tell you what to dry fit, glue, and/or paint for each individual piece. Each step instruction shows the source (i.e., either Hasegawa or aftermarket instruction) along with a block to mark that you completed the step. The major instruction sequence for this model is 1. Cockpit 2. Main Weapon Bay 3. Sub-weapon Bay 4. Nose Landing Gear Wheel Well 5. Main Landing Gear Wheel Well 6. Engine Exhausts 7. Engine Intake 8. Join Upper & Lower Fuselage Sections 9. Flaps and Stabilizer Dry Fit 10. Paint Prep with Canopy 11. Camo Paint 12. Decals 13. Exhaust Nozzles 14. Landing Gear 15. Weapons Bay Doors 16. Canopy 17. Pilot 18. Engine Covers 19. Ladder I provide an index of the individual sprue parts that show where in the book the part is mentioned. This index was a great way to make sure that no pieces were overlooked. Finally, there are several pages of in-process photos with assembly tips and the final photos of my build for reference. This book is a great checklist to make your build go smoothly. Of course, you can feel free to use different tools, paint, weathering, etc. or even add your own diorama. I did a lot of research and didn't see anything this detailed about a model build. Most articles or videos concentrate on parts of their build or just give a summary review. I wanted to go down to the piece level and take you thru the whole build. Anyway, I hope you find this book useful. See a 16-page sample along with photos of finished models and other books at glennhoovermodels.com.

Holder. 1998 It's called the Raptor. The F-22 will be the U.S. Air Force's premier fighter for the first decades of the 21st century.

Like other expensive military programs, the F-22 endured continuous scrutiny throughout its development - the aircraft that evolved was worth the wait. The F-22 is definitely top gun - it is more agile than current U.S. aircraft, has stealth capability, and is flexible in both air-to-air and air-to-ground attack missions. The Raptor is planned to start operational service with the U.S. Air Force in the year 2004, and when on-line, will provide a capability far beyond that of any other fighter aircraft.

problem which plagued the F-22 Raptor fighter plane. Process Roadmap: Determining the Cause of F-22 Unexplained Physiological Incidents - U.S. Air Force - The Air Force Scientific Advisory Board's (AFSAB) Quicklook Study on Aircraft Oxygen Generation Systems (OBOGS) has been completed and released. While this study did not determine the root cause(s) for a disproportionately larger rate of unexplained physiological incidents in the F-22 than other fighter type aircraft in the U.S. inventory, it provided processes and procedures to be used in determining the root cause(s) for those incidents. The AFSAB study was the first tier of four in the Air Forces' deliberate effort to find the cause(s) for the F-22's unexplained physiological incidents. The first tier was initiated in April of 2008 with the first reported F-22 physiological incident. Engineers from the F-22 System Program Office, the prime contractor for the F-22, Lockheed Martin, and its two primary subcontractors responsible for the F-22's Life Support System, Boeing and Honeywell, initiated the Root Cause and Correction Analysis process which worked in collaboration with the Air Force safety investigation process to determine the root cause(s) behind reported incidents. Ultimately, causes were determined for two of the 14 incidents reported between April of 2008 and May of 2011. The remaining twelve cases represented a rate of more than ten times the Air Force average for other aircraft systems. After the tragic loss of pilot Capt Jeff Haney and his F-22 in Alaska in November 2010, the initial mishap investigation suggested that hypoxia, a lack of oxygen available to the pilot, may have been causal to the accident. Ultimately, the Air Force's Accident Investigation Board concluded that Haney failed to recognize and initiate a timely dive recovery due to channelized attention. United States Air Force Scientific Advisory Board Report on Aircraft Oxygen Generation - Many aircraft make use of an on-board oxygen generation system to provide breathing oxygen for the aircrew. Compared to historical experience, there have been an increasing

number of hypoxia-like incidents in the F-22 Raptor aircraft, that may be related to their on-board oxygen generating systems (OBOGS) or their installation. The United States Air Force (USAF) Scientific Advisory Board was tasked to conduct a Quicklook Study of system safety issues involving OBOGS to help ensure that the appropriate steps are being taken to enhance flight safety of these aircraft. These included, but were not limited to, evaluating the current F-22 oxygen system, evaluating OBOGS and life support systems in general, investigating contaminants that could have an effect on OBOGS operation, evaluating human responses to high altitude rapid cabin altitude changes/rapid decompression environment with less than 90% oxygen, assisting with F-22 return-to-fly criteria as requested, revalidating and clarifying Air Standards, reviewing and validating implementation of performance-based acquisition programs and associated risk analysis protocols, examining specific hypoxia-like incidents occurring in flight regimes not normally considered likely for hypoxia events, and reviewing and revalidating all aircrew flight equipment affiliated with OBOGS-equipped aircraft. Priority was given to F-22 aircraft; however, other OBOGS-equipped aircraft were also considered.

traces the history of the Raptor and describes in detail why it is likely to be the world's best fighter for years to come. Although the Raptor was designed for air superiority, it also embodies ground attack, electronic warfare, and signals intelligence features. After years in planning and development, the US Air Force announced plans to purchase more than 600 F-22 Raptors in 1991. Cutbacks in 1993 reduced the number to 442. With the onset of the Obama Administration, Raptor production was capped at 187 units. As challenges to US global leadership mount, however, the Raptor's capabilities will face increasing demand.

Lockheed Martin F/A-22 Raptor Jay Miller.2005 Initially referred to as the Advanced Tactical Fighter (ATF), the F-22 was designed to meet a USAF requirement for 750 new fighters to replace the F-15 Eagle. Work began in the early 1980s, and competition selection resulted in orders for flying demonstration prototypes of the YF-22 and the Northrop YF-23. The first of two prototypes was flown on 29th September 1990, and extensive testing and evaluation took place during that decade. In 1993 an air-to-ground attack role using precision-guided munitions was added to the original air superiority role, and the designation has been changed to F/A-22 to reflect this. The F-22 is designed to supercruise at up to Mach 1.5 without use of the afterburner, and its unusual layout is designed for agility as well as to incorporate stealth characteristics. A planned two-seat trainer version, the F-22B was cancelled, but production deliveries are now taking

Piccirillo. 1997 *Have Blue and the F-117A: Evolution of the Stealth Fighter* documents the history, observations, and lessons learned from the development and acquisition of the first very-low-observable combat aircraft. The book is a case study of the high-payoff, low-profile strike fighter development effort (code-named *Have Blue* and *Senior Trend*). In 1991, the aircraft played a key role in the air campaign against Iraq during Operation Desert Storm. The book describes the clear vision, strong leadership and teamwork, rapid-response decision making, and keen focus on achieving an operational capability that marked the project. Also discussed are potential applications of the strategies used in the project to today's acquisition environment.
