Reef Fish Spawning Aggregations: Biology, Research and Management Yvonne Sadovy de Mitcheson, Patrick L. Colin. 2011-12-10 Reef fish spawning aggregations, ranging from small groups to many tens of thousands of individuals, are spectacular but poorly known natural phenomena whereby fish assemble at specific times and locations to spawn. For some species these large groups may be the only form of reproduction, the high fish numbers briefly giving a false impression of stability and abundance—an 'illusion of plenty'. They are often a focus for intensive seasonal fishing because of their predictability and because many important commercial fishes form them. Highly vulnerable to overexploitation, many aggregations and their associated fisheries, have disappeared or are in decline. Few are effectively managed or incorporated into protected areas. Aggregations are not well understood by fishery scientists, managers and conservationists and their significance little appreciated by fishers or the wider public. To ensure their persistence to replenish important fisheries in coral ecosystems, maintain their ecosystem function and continue to delight divers, a significant change in perspective is needed to foster protection and management. This book provides comprehensive and practical coverage of the biology, study and management of reef fish aggregations, exploring their how, when, where, and why. It explores ways to better protect, study, manage and conserve them, while identifying key data gaps and questions. The text is extensively illustrated with many unique, never before published, photographs and graphics. Case studies on over 20 interesting and important fishes are included, outlining their biology and fisheries and highlighting major concerns and challenges.

Film Essays and Criticism Rudolf Arnheim. 1997 This collection of essays by Rudolph Arnheim (film criticism, U. of Michigan) explores film theory, criticism, and many classic films from the silent and early sound period (the 1920s and early 1930s). The majority of essays included in this collection were written and published in Berlin during the Weimar Republic, and have been translated into English for the first time. Arnheim argues that up until 1930, film artists created pure forms of cinema crafted with a narrative economy which could unify the most varied of effects. As movies became more realistic looking due to technical advances, cinema began to lose its integrity and viability. Paper edition (unseen), \$18.95. The Atlantic Forest Marcia C. M. Marques, Carlos E. V. Grelle. 2021-01-13 The Atlantic Forest is one of the 36 hotspots for biodiversity conservation worldwide. It is a unique, large biome (more than 3000 km in latitude; 2500 in longitude), marked by high biodiversity, high degree of endemic species and, at the same time, extremely threatened. Approximately 70% of the Brazilian population lives in the area of this biome, which makes the conflict between biodiversity conservation and the sustainability of the human population a relevant issue. This book aims to cover: 1) the historical characterization and geographic variation of the biome; 2) the distribution of the diversity of some relevant taxa; 3) the main threats to biodiversity, and 4) possible opportunities to ensure the biodiversity conservation, and the economic and social sustainability. Also, it is hoped that this book can be useful for those involved in the development of public policies aimed at the conservation of this important global biome.

The 21st Century Singularity and Global Futures Andrey V. Korotayev, David J.

LePoire. 2020-01-02 This book introduces a 'Big History' perspective to understand the acceleration of social, technological and economic trends towards a near-term singularity, marking a radical turning point in the evolution of our planet. It traces the emergence of accelerating innovation rates through global history and highlights major historical transformations throughout the evolution of life, humans, and civilization. The authors pursue an interdisciplinary approach, also drawing on concepts from physics and evolutionary biology, to offer potential models of the underlying mechanisms driving this acceleration, along with potential clues on how it might progress. The contributions gathered here are divided into five parts, the first of which studies historical mega-trends in relation to a variety of aspects including technology, population, energy, and information. The second part is dedicated to a variety of models that can help understand the potential mechanisms, and support extrapolation. In turn, the third part explores various potential future scenarios, along with the paths and decisions that are required. The fourth part presents philosophical perspectives on the potential deeper meaning and implications of the trend towards singularity, while the fifth and last part discusses the implications of the Search for Extraterrestrial Intelligence (SETI). Given its scope, the book will appeal to scholars from various disciplines interested in historical trends, technological change and evolutionary processes.

Images of Immigrants and Refugees in Western Europe Leen d'Haenens,Willem Joris,François Heinderyckx.2019-05-14 Perception and representation of newcomers and immigrants The topic of migration has become particularly contentious in national and international debates. Media have a discernable impact on overall societal attitudes towards this phenomenon. Polls show time and again that immigration is one of the most important issues occupying people's minds. This book examines the dynamic interplay between media representations of migrants and refugees on the one hand and the governmental and societal (re)actions to these on the other. Largely focusing on Belgium and Sweden, this collection of interdisciplinary research essays attempts to unravel the determinants of people's preferences regarding migration policy, expectations towards newcomers, and economic, humanitarian and cultural concerns about immigration's effect on the majority population's life. Whilst migrants and refugees remain voiceless and highly underrepresented in the legacy media, this volume allows their voices to be heard. Contributors: Leen d'Haenens (KU Leuven), Willem Joris (KU Leuven), Paul Puschmann (KU Leuven/Radboud University Nijmegen), Ebba Sundin (Halmstad University), David De Coninck (KU Leuven), Rozane De Cock (KU Leuven), Valérie Mistiaen (Université libre de Bruxelles), Lutgard Lams (KU Leuven), Stefan Mertens (KU Leuven), Olivier Standaert (UC Louvain), Hanne Vandenberghe (KU Leuven), Koen Matthijs (KU Leuven), Kevin Smets (Vrije Universiteit Brussel), Jacinthe Mazzocchetti (UC Louvain), Lorraine Gerstmans (UC Louvain), Lien Mostmans (Vrije Universiteit Brussel), and François Heinderyckx (Université libre de Bruxelles) Ebook available in Open Access. Whip Spiders. Their Biology, Morphology and Systematics (Chelicerata: Amblypygi) Peter Weygoldt.2021-10-25 Whip spiders (Amblypygi) can be large and terrifying animals with strong, raptorial pedipalps and long antenniform first legs that can produce a span of as much as 60 cm. Others are small and scarcely span 5 cm. They all lead a secretive nocturnal life and are extremely dangerous to other arthropods and small vertebrates. In contrast to spiders and scorpions, they are of no commercial, economic or medical importance and they are difficult to study in the field because of their nocturnal habits, possible reasons why they have been greatly neglected until recently, by scientists and naturalists. Whip spiders represent an old group that dates back to the Carboniferous period. Their partly primitive and partly derived morphological characters and habits make the study of these animals interesting, while observation of their behaviour greatly increases our knowledge and understanding of arachnids in general. In this book the author describes their morphology and systematics, their life history, their fascinating sensory biology, their complex mating dances and reproductive biology, and their ecology and distribution. Thus he has made a significant contribution to a better understanding of the morphology and biology of the Arachnida as a whole. Whip Spiders is an outstanding contribution to science and it will be of interest for anyone with an interest in Arachnida and for those keeping and breeding spiders.

Upwelling Ecosystems R. Boje, M. Tomczak.2012-12-06 Upwelling areas are among the most fertile regions of the ocean. In principle, upwelling is caused by the divergence of the flow in the surface layer of the ocean which arises as a consequence of a particular wind field, the presence of a coastline, or other special conditions. Since deeper oceanic layers are usually enriched with nutrients, it is the permanent supply of nutrients which forms the basis for the high productivity of upwelling regions. The study of upwelling and its consequences were, for a long time, the task of individual scientists from all disciplines of marine science. Today, it is perhaps the branch of oceanography where interdisciplinary cooperation has developed best. Becoming aware of the large potential yield of upwelling regions, governments increased the funds for upwelling research. With research activities developed on a larger scale, interdisciplinary cooperation became a necessity. On the international level, several symposia documented the rapid development. Three volumes

reflect the results of these scientific meetings (Rapp. Proc.-Verb. 159, 1970; Inv. Pesq. 35, 1, 1971; Tethys §. 1-2, 1974). The present book contains selected papers from the Third Symposium on Upwelling Ecosystems, which was held in Kiel in September 1975. Although the third of a series of meetings, it was the first where the word ecosystem stood in the title for a scientific program.

The Rhapsodes David Bordwell.2016-04-04 Pauline Kael, Andrew Sarris, and Roger Ebert were three of America's most revered and widely read film critics, more famous than many of the movies they wrote about. But their remarkable contributions to the burgeoning American film criticism of the 1960s and beyond were deeply influenced by four earlier critics: Otis Ferguson, James Agee, Manny Farber, and Parker Tyler. Film scholar and critic David Bordwell restores to a wider audience the work of Ferguson, Agee, Farber, and Tyler, critics he calls the 'Rhapsodes' for the passionate and deliberately offbeat nature of their vernacular prose.

Genomics of Chloroplasts and Mitochondria Ralph Bock,Volker Knoop.2012-06-05 The past decade has witnessed an explosion of our knowledge on the structure, coding capacity and evolution of the genomes of the two DNA-containing cell organelles in plants: chloroplasts (plastids) and mitochondria. Comparative genomics analyses have provided new insights into the origin of organelles by endosymbioses and uncovered an enormous evolutionary dynamics of organellar genomes. In addition, they have greatly helped to clarify phylogenetic relationships, especially in algae and early land plants with limited morphological and anatomical diversity. This book, written by leading experts, summarizes our current knowledge about plastid and mitochondrial genomes in all major groups of algae and land plants. It also includes chapters on endosymbioses, plastid and mitochondrial mutants, gene expression profiling and methods for organelle transformation. The book is designed for students and researchers in plant molecular biology, taxonomy, biotechnology and evolutionary biology.

Handbook of Diseases of Banana, Abaca and Enset David R Jones.2018-12-14 This book provides a comprehensive guide to the large number of diseases, disorders and injuries that can cause severe economic losses to banana, abacá and enset crops, and the fungi, bacteria, phytoplasmas, viruses, nematodes and abiotic factors involved. The monoculture of certain banana cultivars in large plantations make the crop particularly susceptible to catastrophic losses from disease and smallholders can also experience major problems. New approaches to breeding, crop management and handling are being developed to meet challenges posed by emerging threats. Handbook of

Diseases of Banana, Abacá and Enset both describes and illustrates diseases and is printed in full colour throughout, creating a valuable diagnostic tool. It covers: - The origin and classification of banana, the safe movement of Musa germplasm and banana breeding for disease resistance. - Recent areas of growing research on the most important diseases of banana, such as black leaf streak, Fusarium wilt, Xanthomonas bacterial wilt and bunchy top. - Significant advances relating to pathogens causing less serious and widespread diseases. Authored by an international team of experts, this is an essential reference for all 'banana doctors' around the world. It serves as a useful field and laboratory guide, as well as a source of information for all those investigating diseases of banana, abacá and enset crops.

Intertextual Studies in Ben Sira and Tobit Jeremy Corley, Vincent T. M. Skemp. 2005 This volume offers 17 essays on the apocryphal/deuterocanonical books of Ben Sira (Ecclesiasticus) and Tobit. Five further essays examine Ben Sira's links with Genesis (Maurice Gilbert), Exodus (Friedrich Reiterer), Kings (Pancratius Beentjes), Prophets (Leo Perdue), and Proverbs (Jeremy Corley). Seven more essays on Ben Sira refer to the patriarch Joseph (Robert Hayward), Ezra (Michael Duggan), fear of God (Renate Egger-Wenzel), Qoheleth (Edward Owens), First Enoch (Benjamin Wright), Letter of James (Núria Calduch-Benages), and Matthew's Gospel (James Aitken).

The Adélie Penguin David Ainley. 2002-10-01 The Adélie penguin is one of the best-studied birds in the world and is the subject of research programs from a dozen nations interested in monitoring changes in the environment and the food webs of the Southern Ocean. This species' population has been changing dramatically over the past few decades coincident with a general warming of the maritime portion of Antarctica. When the sea-ice is seen to decline so does the population of Adélie penguins. Further south, however, the population is increasing. This book summarizes our present ecological knowledge of this polar seabird. In so doing, David Ainley describes the ecological factors important to its life history and details the mechanisms by which it is responding to climate change. The author also chronicles the history of research on Adélie penguins, beginning with the heroic expeditions at the beginning of the twentieth century. Weaving together history, ecology, natural history, and written accounts from the earliest Antarctic naturalists into a fascinating account of this charismatic bird, The Adélie Penguin provides a foundation upon which future ornithological research and environmental monitoring can be based. It is a model for investigations into the effect of climate change on a particular species. The book also contains many fine illustrations from the accomplished illustrator Lucia deLeiris and photographs by the author.
