Photography after Photography Abigail Solomon-Godeau.2017-04-18 Presenting two decades of work by Abigail Solomon-Godeau, *Photography after Photography* is an inquiry into the circuits of power that shape photographic practice, criticism, and historiography. As the boundaries that separate photography from other forms of artistic production are increasingly fluid, Solomon-Godeau, a pioneering feminist and politically engaged critic, argues that the relationships between photography, culture, gender, and power demand renewed attention. In her analyses of the photographic production of Cindy Sherman, Robert Mapplethorpe, Susan Meiselas, Francesca Woodman, and others, Solomon-Godeau refigures the disciplinary object of photography by considering these practices through an examination of the determinations of genre and gender as these shape the relations between photographers, their images, and their viewers. Among her subjects are the 2006 Abu Ghraib prison photographs and the Cold War-era exhibition *The Family of Man*, insofar as these illustrate photography's embeddedness in social relations, viewing relations, and ideological formations.

Wireless Communication in Underground Mines L. K. Bandyopadhyay, S. K. Chaulya, P. K. Mishra.2009-08-29 Wireless communication has emerged as an independent discipline in the past decades. Everything from cellular voice telephony to wireless data transmission using wireless sensor networks has profoundly impacted the safety, production, and productivity of industries and our lifestyle as well. After a decade of exponential growth, the wireless industry is one of the largest industries in the world. Therefore, it would be an injustice if the wireless communication is not explored for mining industry. Underground mines, which are characterized by their tough working

conditions and hazardous environments, require fool-proof mine-wide communication systems for smooth functioning of mine workings and ensuring better safety. Proper and reliable communication systems not only save the machine breakdown time but also help in immediate passing of messages from the vicinity of underground working area to the surface for day-to-day normal mining operations as well as for speedy rescue operations in case of disaster. Therefore, a reliable and effective communication system is an essential requisite for safe working, and maintaining requisite production and productivity of underground mines. Most of the existing systems generally available in underground mines are based on line (wired) communication principle, hence these are unable to withstand in the disaster conditions and difficult to deploy in inaccessible places. Therefore, wireless communication is an indispensable, reliable, and convenient system and essential in case of day-to-day normal duty or disaster situations.

Engineering Surveying W Schofield, Mark Breach. 2007-02-14 Engineering surveying involves determining the position of natural and man-made features on or beneath the Earth's surface and utilizing these features in the planning, design and construction of works. It is a critical part of any engineering project. Without an accurate understanding of the size, shape and nature of the site the project risks expensive and time-consuming errors or even catastrophic failure. This fully updated sixth edition of *Engineering Surveying* covers all the basic principles and practice of the fundamentals such as vertical control, distance, angles and position right through to the most modern technologies. It includes:

- * An introduction to geodesy to facilitate greater understanding of satellite systems
- * A fully updated chapter on GPS, GLONASS and GALILEO for satellite positioning in surveying
- * All new chapter on the important subject of rigorous estimation of control coordinates
- * Detailed material on mass data methods of photogrammetry and laser scanning and the role of

inertial technology in them With many worked examples and illustrations of tools and techniques, it suits students and professionals alike involved in surveying, civil, structural and mining engineering, and related areas such as geography and mapping.

Strategic Business Partner Dana Gaines Robinson,James Robinson.2005-03-01 Research clearly indicates that there is a strong need for the Human Resources (HR) function, and the people in it, to

adopt a more strategic and business-linked approach. In one study business executives ranked the HR function as third, after sales and customer service, as a function that makes a very significant contribution to a company's bottom line. Unfortunately research also indicates that few HR functions have become strategic. Most still operate in a primarily administrative and tactical manner—the very work that is increasingly being outsourced. Clearly there is a gap between what business leaders and employees need from their HR departments and what HR is providing. HR functions must become more integrated into the business, with some people on the HR team assuming the role of Strategic Business Partner (SBP). Here, Dana and Jim Robinson offer guidance for HR, Organization Development and Learning professionals who aspire to transform themselves into effective Strategic Business Partners. They explain how SBPs build partnerships, based upon credibility and trust, with key organization leaders. These partnerships provide SBPs with opportunities to identify and support projects directly aligned with business goals. The success of these projects deepens the SBPs' credibility, enabling them to be viewed as strategic partners. At this higher level of accountability, SBPs work with business leaders to form long-range business strategies and plans, creating and implementing people initiatives that link into and support the business strategies and plans. This practical guide offers case studies, exercises, tips, and tools you can use to become a Strategic Business Partner in your organization.
