The New Geographies of Energy Karl S. Zimmerer.2013-09-13 The New Geographies of Energy: Assessment and Analysis of Critical Landscapes is a pioneering collection of new geographic scholarship. It examines such vitally important research topics as energy dilemmas of the United States, large trends and patterns of energy consumption including China's role, peak oil, energy poverty, and ethanol and other renewable energy sourcing. The book offers advances in key emerging areas of energy research, each distinguished in the following sections: (i) geographic approaches to energy modeling and assessment; (ii) fossil fuel landscapes; (iii) the landscapes of renewable energy; (iv) landscapes of energy consumption; and (v) an overview of the new

geographies of energy (Karl Zimmerer, Annals Nature-Society and Energy issue editor) and an essay on America's oil dependency (Vaclav Smil, renowned energy geographer). In addition there is a specially commissioned book review. This book was published as a special issue of the Annals of the Association of American Geographers.

Handbook of Ethics, Values, and Technological Design Jeroen van den Hoven, Pieter E.

Vermaas, Ibo van de Poel. 2015-06-11 This handbook enumerates every aspect of incorporating moral and societal values into technology design, reflects the fact that the latter has moved on from strict functionality to become sensitive to moral and social values such as sustainability and accountability. Aimed at a broad readership that includes ethicists, policy makers and designers themselves, it proffers a detailed survey of how technological, and institutional, design must now reflect awareness of ethical factors such as sustainability, human well-being, privacy, democracy and justice, inclusivity, trust, accountability, and responsibility (both social and environmental). Edited by a trio of highly experienced academic philosophers with a specialized interest in the ethical dimensions of technology and human creativity, this syncretic handbook collates an array of published material and offers a studied, practical introduction to the field. The volume addresses myriad aspects at the intersection of technology design and ethics, enabling designers to adopt a constructive approach in anticipating, preventing, and resolving societal and ethical issues affecting their work. It covers underlying theory; discrete values such as democracy, human well-being, sustainability and justice; and application domains themselves, which include architecture, bio- and nanotechnology, and military hardware. As the first exhaustive survey of a field whose importance is characterized by almost exponential growth, it represents a compelling addition to a formerly atomized literature.

This book will provide the reader with some obvious and some hidden information you need for understanding where experts have not served the public, what more could have been done to reach and serve the public and the ethical issues surrounding the Earth Sciences, from a global perspective. Written by a global group of contributors with backgrounds ranging from philosopher to geo-practitioner, providing a balance of voices Includes case studies, showing where experts have gone wrong and where key organizations have ignored facts, wanting assessments favorable to their agendas Provides a much needed basis for discussion to guide scientists to consider their responsibilities and to improve communication with the public

Why More Is Different Brigitte Falkenburg, Margaret Morrison. 2015-02-26 The physics of condensed matter, in contrast to quantum physics or cosmology, is not traditionally associated with deep philosophical questions. However, as science - largely thanks to more powerful computers - becomes capable of analysing and modelling ever more complex many-body systems, basic questions of philosophical relevance arise. Questions about the emergence of structure, the nature of cooperative behaviour, the implications of the second law, the quantum-classical transition and many other

issues. This book is a collection of essays by leading physicists and philosophers. Each investigates one or more of these issues, making use of examples from modern condensed matter research. Physicists and philosophers alike will find surprising and stimulating ideas in these pages.

International Science and Technology Education Ortwin Renn, Nicole C. Karafyllis, Andreas Hohlt, Dorothea Taube. 2015-06-24 Education in science, technology, engineering and mathematics (STEM) is crucial for taking advantage of the prospects of new scientific discoveries initiating or promoting technological changes, and managing opportunities and risks associated with innovations. This book explores the emerging perspectives and methodologies of STEM education and its relationship to the cultural understanding of science and technology in an international context. The authors provide a unique perspective on the subject, presenting materials and experiences from non-European industrialized as well as industrializing countries, including China, Japan, South Korea, India, Egypt, Brazil and the USA. The chapters offer a wide scope of interpretations and comparative reviews of STEM education by including narrative elements about cultural developments, considering the influence of culture and social perceptions on technological and social change, and applying innovative tools of qualitative social research. The book represents a comprehensive and multidisciplinary review of the current status and future challenges facing STEM education across the world, including issues such as globalization, interdependencies of norms and values, effects on equity and social justice as well as resilience. Overall the volume provides valuable insights for a broad and comprehensive international comparison of STEM philosophies, approaches and experiences.

Transforming City Governments for Successful Smart Cities Manuel Pedro Rodríguez-Bolívar. 2015-07-01 There has been much attention paid to the idea of Smart Cities as researchers have sought to define and characterize the main aspects of the concept, including the role of creative industries in urban growth, the importance of social capital in urban development, and the role of urban sustainability. This book develops a critical view of the Smart City concept, the incentives and role of governments in promoting the development of Smart Cities and the analysis of experiences of e-government projects addressed to enhance Smart Cities. This book further analyzes the perceptions of stakeholders, such as public managers or politicians, regarding the incentives and role of governments in Smart Cities and the critical analysis of e-government projects to promote Smart Cities' development, making the book valuable to academics, researchers, policy-makers, public managers, international organizations and technical experts in understanding the role of government to enhance Smart Cities' projects.

Rethinking Climate and Energy Policies Tilman Santarius, Hans Jakob Walnum, Carlo Aall. 2016-08-18 This book calls for rethinking current climate, energy and sustainability policy-making by presenting new insights into the rebound phenomenon; i.e., the driving forces,

mechanisms and extent of rebound effects and potential means of mitigating them. It pursues an innovative and novel approach to the political and scientific rebound discourse and hence, supplements the current state-of-knowledge discussed in the field of energy economics and recent reports by the Intergovernmental Panel on Climate Change. Building on central rebound publications from the past four decades, this book is divided into three main sections: Part I highlights new aspects of rebound economics by presenting insights into issues that have so far not been satisfactorily researched, such as rebounds in countries of the Global South, rebounds on the producer-side, and rebounds from sufficiency behaviour (as opposed to rebounds from technical efficiency improvements). In turn, Part II goes beyond conventional economic rebound research, exploring multidisciplinary perspectives on the phenomenon, in particular from the fields of psychology and sociology. Advancing such multidisciplinary perspectives delivers a more comprehensive understanding of rebound's driving forces, mechanisms, and policy options. Part III puts rebounds into practice and presents several policy cases and sector-specific approaches, including the contexts of labour markets, urban planning, tourism, information and communication technologies, and transport. Lastly, the book embeds the issue into the larger debate on decoupling, green growth and degrowth, and identifies key lessons learned for sustainable development strategies and policies at large. By employing such varied and in-depth analyses, the book makes an essential contribution to the discussion of the overall question: Can resource-, energy-use and greenhouse gas emissions be substantially reduced without hindering economic growth?

Energy Justice Raya Salter, Carmen G. Gonzalez, Elizabeth Ann Kronk Warner. 2018-11-30 Energy Justice: US and International Perspectives is a pioneering analysis of energy law and policy through the framework of energy justice. While climate change has triggered unprecedented investment in

renewable energy, the concept of energy justice and its practical application to energy law and policy remain under-theorized. This volume breaks new ground by examining a range of energy justice regulatory challenges from the perspective of international law, US law, and foreign domestic law. The book illuminates the theory of energy justice while emphasizing practical solutions that hasten the transition from fossil fuels and address the inequities that plague energy systems.

Sustainable Energy Landscapes Sven Stremke, Andy van den Dobbelsteen. 2012-09-12 In the near future the appearance and spatial organization of urban and rural landscapes will be strongly influenced by the generation of renewable energy. One of the critical tasks will be the re-integration of these sustainable energy landscapes into the existing environment-which people value and want to preserve-in a socially fair, environmental

Inquiring into Animal Enhancement Simone Bateman, Sylvie Allouche, Jean Gayon, Michela Marzano, Jérôme Goffette. 2015-09-01 This book explores issues raised by past and present practices of animal enhancement in terms of their means and their goals, clarifies conceptual issues and identifies lessons that can be learned about enhancement practices, as they concern both animals and humans.

Smart Bioenergy Daniela Thrän. 2016-10-09 Biomass is a vital source of renewable energy, because it offers a wide range of established and potential methods for energy generation. It is also an important facet of the progression toward a sustainable energy future. The need for further development in the provision of bioenergy is underlined by challenges affecting the biomass resource base, including rising demand for biomass for food, feed, materials and fuel. This is underlined by significant concerns over factors relating to land, such as soil, nutrients and biodiversity. This book examines and analyzes Germany's decade-long initiative toward

implementation of an active policy for the transition of the energy system to make greater use of renewable energy sources, which has resulted in a significant increase in the amount of biomass used for electricity, heat and transport fuel. The book begins with a review of market and resource base issues and moves on to analyze the technical options for a more integrated bioenergy use. The analysis spans the entire bioenergy provision chain including solid, liquid and gaseous biofuels. A case study offers a detailed model of the effects of smart biomass energy on the German energy system. The book closes with a view of the most promising fields and an appraisal of needed elements for a successful transition.

Electric Vehicle Batteries: Moving from Research towards Innovation Emma Briec, Beate Müller. 2014-12-26 This edited volume presents research results of the PPP European Green Vehicle Initiative (EGVI), focusing on electric vehicle batteries. Electrification is one road towards sustainable road transportation, and battery technology is one of the key enabling technologies. However, at the same time, battery technology is one of the main obstacles for a broad commercial launch of electric vehicles. This book includes research contributions which try to bridge the gap between research and innovation in the field of battery technology for electric vehicles. The target audience primarily comprises researchers and experts in the field.

Autonomous Driving Markus Maurer, J. Christian Gerdes, Barbara Lenz, Hermann Winner. 2016-05-21 This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies?

Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of “autonomous driving.”

Foundations of Social Democracy Tobias Gombert.2017

Theories of Sustainable Development Judith C. Enders, Moritz Remig.2014-10-24 While sustainability has become a buzzword in discussions about the environment and development, work on theories of sustainable development has received much less attention. However, theory is vital as understanding the origins and development of the concept is the key to achieving successful implementation of sustainability. This book offers an interdisciplinary collection of research articles on the theories of sustainable development, drawing on a wide range of subjects including history, politics, governance, complex systems, economics and philosophy. It advocates viewing sustainable development not only as the establishment of a permanent, globally practicable and future-capable mode of life and economics, but as a complex array of problems involving a wide range of social-scientific and humanistic disciplines. This innovative approach means that the book is oriented

toward current problems, not toward the established academic boundaries, and it draws out lessons that are relevant for those studying and working in sustainability across the world. This book will be of great interest to researchers and students of sustainable development and environmental politics, as well as practitioners working with sustainable development in politics, business, administration, and civil society organizations.

Encyclopedia of Global Bioethics Henk ten Have. 2016-11-29 This work presents the first comprehensive and systematic treatment of all relevant issues and topics in contemporary global bioethics. Now that bioethics has entered into a novel global phase, a wider set of issues, problems and principles is emerging against the backdrop of globalization and in the context of global relations. This new stage in bioethics is furthermore promoted through the ethical framework presented in the UNESCO Universal Declaration on Bioethics and Human Rights adopted in 2005. This Declaration is the first political statement in the field of bioethics that has been adopted unanimously by all Member States of UNESCO. In contrast to other international documents, it formulates a commitment of governments and is part of international law (though not binding as a Convention). It presents a universal framework of ethical principles for the further development of bioethics at a global level. The Encyclopedia of Global Bioethics caters to the need for a comprehensive overview and systematic treatment of all pertinent new topics and issues in the emerging global bioethics debate. It provides descriptions and analysis of a vast range of important new issues from a truly global perspective and with a cross-cultural approach. New issues covered by the Encyclopedia and neglected in more traditional works on bioethics include, but are not limited to, sponsorship of research and education, scientific misconduct and research integrity, exploitation of research participants in resource-poor settings, brain drain and migration of

healthcare workers, organ trafficking and transplant tourism, indigenous medicine, biodiversity, commodification of human tissue, benefit sharing, bio industry and food, malnutrition and hunger, human rights and climate change.

Synthetic Biology Bernd Giese, Christian Pade, Henning Wigger, Arnim von Gleich. 2014-09-27

Synthetic Biology is already an object of intensive debate. However, to a great extent the discussion to date has been concerned with fundamental ethical, religious and philosophical questions. By contrast, based on an investigation of the field's scientific and technological character, this book focuses on new functionalities provided by synthetic biology and explores the associated opportunities and risks. Following an introduction to the subject and a discussion of the most central paradigms and methodologies, the book provides an overview of the structure of this field of science and technology. It informs the reader about the current stage of development, as well as topical problems and potential opportunities in important fields of application. But not only the science itself is in focus. In order to investigate its broader impact, ecological as well as ethical implications will be considered, paving the way for a discussion of responsibilities in the context of a field at a transitional crossroads between basic and applied science. In closing, the requirements for a suitable regulatory framework are discussed. The book is intended as a source of information and orientation for researchers, students and practitioners in the natural sciences and technology assessment; for members of scientific and technological, governmental and funding institutions; and for members of the general public interested in essential information on the current status, prospects and implications of synthetic biology.

Environmental Futures J. Alcamo. 2008-10-10 As scientists and policymakers try to come to grips with problems such as climate change and risks to biodiversity, they turn more and more frequently

to the method of scenario analysis to better understand the future of these problems. Over the last few years scenario analysis has become one of the key tools for bridging environmental science and policy. This is the first book to sum up the current practice of environmental scenario analysis and to propose directions for improving its quality and effectiveness. Chapters are written by an international group of distinguished scenario experts and provide an excellent starting basis for first-time scenario practitioners, as well as a collection of new ideas on improving scenario practice for experienced scenario analysts. * Comprehensive coverage and overview on environmental scenario analysis from a team of international experts * First book to address key contemporary issues involved with environmental scenario analysis * Gives guidelines for best practices Benefits: * Excellent starting base for first-time scenario practitioners * Helps the reader to interpret scenarios and to place them into the correct context

Große Hoffnungen und brüchige Koalitionen Timur Ergen.2015-11-12 Die direkte Sonnenenergienutzung hat seit den 1970er-Jahren einen beachtlichen technischen Fortschritt und große Zukunftshoffnungen hervorgebracht. Doch trotz des hohen Mobilisierungspotenzials in Wissenschaft, Politik und Wirtschaft und der daraus resultierenden großzügigen Förderung blieb die Photovoltaik bis Mitte des letzten Jahrzehnts eine Zukunftstechnologie ohne Marktchancen. Timur Ergen zeigt, dass diese Entwicklung auf Probleme sektoraler Ordnung zurückzuführen ist: In Industrie und Politik kam es wiederkehrend zu Umsetzungsproblemen und Konflikten, die verhinderten, dass die Solartechnik effektiv weiterentwickelt und kontinuierlich unterstützt wurde.

Evolutionary Robotics, Organic Computing and Adaptive Ambience Michael Decker, Mathias Gutmann, Julia Knifka.2015 The central features and performances of technologies are often referred to as if they were living entities, thus they are supposed to act as human agents, simulate human

activities, properties or skills. Technomorphic and biomorphic descriptions are not only present in everyday language use, but within the sciences as well. In this book, the authors reflect on the methodological, anthropological as well as normative roles metaphors play in the development and implementation of adaptive and intelligent technologies. The structures, areas of applications and implications of technomorphic and biomorphic descriptions are put under scrutiny in order to provide guiding knowledge for technology developers and policy makers and initiate critical reflections of exposure to new technologies. Michael Decker is (Full) Professor for Technology Assessment. Mathias Gutmann is (Full) Professor for Philosophy of Technology. Julia Knifka is Teaching and Research Assistant in the Department of Philosophy. All three editors are researchers at the Karlsruhe Institute of Technology (KIT). (Series: Hermeneutics and Anthropology / Hermeneutik und Anthropologie - Vol. 6) [Subject: Technology, Robotics, Sociology, Anthropology] *Social Robots from a Human Perspective* Jane Vincent, Sakari Taipale, Bartolomeo Sapio, Giuseppe Lugano, Leopoldina Fortunati. 2015-05-08 This book presents a comprehensive overview of the human dimension of social robots by discussing both transnational features and national peculiarities. Addressing several issues that explore the human side of social robots, this book investigates what a social robot is and how we might come to think about social robots in the different areas of everyday life. Organized around three sections that deal with Perceptions and Attitudes to Social Robots, Human Interaction with Social Robots, and Social Robots in Everyday Life, it explores the idea that even if the challenges of robot technologies can be overcome from a technological perspective, the question remains as to what kind of machine we want to have and use in our daily lives. Lessons learned from previous widely adopted technologies, such as smartphones, indicate that robot technologies could potentially be absorbed into the everyday lives of humans in

such a way that it is the human that determines the human-machine interaction. In a similar way to how today's information and communication technologies were initially designed for professional/industrial use, but were soon commercialized for the mass market and then personalized by humans in the course of daily practice, the use of social robots is now facing the same revolution of 'domestication.' In the context of this transformation, which involves the profound embedding of robots in everyday life, the 'human' aspect of social robots will play a major part. This book sheds new light on this highly topical issue, one of the central subjects that will be taught and studied at universities worldwide and that will be discussed widely, publicly and repeatedly in the near future.

Ubiquitous Computing in the Workplace Katharina Kinder-Kurlanda, Céline Ehrwein Nihan. 2015-01-14 This book provides an interdisciplinary collection of views on the ethical challenges and opportunities of workplaces in the Internet of things. Energy Transformation Claude Turmes.2017-07-13 The European Union has powerful resources at its disposal to tackle global warming; together, the countries of the EU are global leaders in the use of renewables. Why, then, has there been such slow progress in actually enforcing energy policy changes? Energy Transformation reveals the bitter political battles fought inside EU institutions over the past fifteen years between the architects of energy transition - those who develop solutions against the grave impetus of global warming - and the saboteurs, who infiltrate the highest European levels of decision-making to slow down the system transformation. Claude Turmes, a prominent MEP on environmental issues, explores a field marked equally by progress and setbacks, from the enthusiasm of the early 2000s to the relapse of the post-2008 economic crisis, with each progressive proposal facing corporate lobbying and high-stakes pressure. It is vital - now more than ever - to understand what we, as industrialised nations, should do. This is a fight not only for the economy, but for democracy and the future of the planet. With the ever-accelerating impact of global warming causing irreversible damage, the time to act is now.

Methods of Future and Scenario Analysis Hannah Kosow,Robert Gassner.2008

Conceptualizing Germany's Energy Transition Ludger Gailing, Timothy Moss. 2016-05-06 This is the first book to explore ways of conceptualizing Germany's ongoing energy transition. Although widely acclaimed in policy and research circles worldwide, the Energiewende is poorly understood in terms of social science scholarship. There is an urgent need to delve beyond descriptive accounts of policy implementation and contestation in order to unpack the deeper issues at play in what has been termed a 'grand societal transformation.' The authors approach this in three ways: First, they select and characterize conceptual approaches suited to interpreting the reordering of institutional arrangements, socio-material configurations, power relations and spatial structures of energy systems in Germany and beyond. Second, they assess the value of these concepts in describing and explaining energy transitions, pinpointing their relative strengths and weaknesses and exploring areas of complementarity and incompatibility. Third, they illustrate how these concepts can be applied - individually and in combination - to enrich empirical research of Germany's energy transition.

Energieversorgung im Wandel - Marktformierung im deutschen Photovoltaik-Innovationssystem Ulrich Dewald. 2012

Handbook of Research on Cluster Theory Charlie Karlsson. 2010-01-01 Karlsson has assembled a strong mix of papers that collectively provide a good sense of some of the latest research in the field. Edward Feser, *Review of Regional Studies* This is a book every regional scientist and spatial analyst should have on their bookshelf. Like most Handbook type publications it provides depth and breadth on the basics of the industrial clustering concept. However, unlike most of these type of collections, it goes beyond the foundation material to identify and speculate on questions that are emerging on the research frontiers such as at the intersection of cluster theory and agglomeration processes,

knowledge spillovers and technology transfer not to mention the obvious link to economic development theory, policy and practice. Roger R. Stough, George Mason University, US This eclectic volume presents a host of methods to describe tendencies for the joint location of economic agents in space. And it illustrates useful applications of these concepts in diverse fields financial services, culture, tourism, and industry, to name just a few. John M. Quigley, University of California, US Clusters have increasingly dominated local and regional development policies in recent decades and the growing intellectual and political interest for clusters and clustering is the prime motivation for this Handbook. Charlie Karlsson unites leading experts to present a thorough overview of economic cluster research. Topics explored include agglomeration and cluster theory, methods for analysing clusters, clustering in different spatial contexts and clustering in service industries. Encompassing the developed economies of Europe and North America, the Handbook provides a basis for improving cluster policy formulation, interpretation and analyses. This comprehensive overview of research on economic clusters will be of interest to scholars and PhD students in (regional) economics, economic geography, regional planning and management as well as practitioners and policymakers at the national, regional and local levels involved in cluster formation and cluster management.

The Renewable Energy Landscape Dean Apostol, James Palmer, Martin Pasqualetti, Richard Sardon, Robert Sullivan. 2016-08-19 Winner of the 2017 EDRA Great Places Award (Research Category) Winner of the 2017 VT ASLA Chapter Award of Excellence (Communications Category) The Renewable Energy Landscape is a definitive guide to understanding, assessing, avoiding, and minimizing scenic impacts as we transition to a more renewable energy future. It focuses attention, for the first time, on the unique challenges solar, wind, and geothermal energy will create for

landscape protection, planning, design, and management. Topics addressed include: Policies aimed at managing scenic impacts from renewable energy development and their social acceptance within North America, Europe and Australia Visual characteristics of energy facilities, including the design and planning techniques for avoiding or mitigating impacts or improving visual fit Methods of assessing visual impacts or energy projects and the best practices for creating and using visual simulations Policy recommendations for political and regulatory bodies. A comprehensive and practical book, *The Renewable Energy Landscape* is an essential resource for those engaged in planning, designing, or regulating the impacts of these new, critical energy sources, as well as a resource for communities that may be facing the prospect of development in their local landscape.

Science and Technology Governance and Ethics Milto Ladikas, Sachin Chaturvedi, Yandong Zhao, Dirk Stemerding. 2015-01-26 This book analyzes the possibilities for effective global governance of science in Europe, India and China. Authors from the three regions join forces to explore how ethical concerns over new technologies can be incorporated into global science and technology policies. The first chapter introduces the topic, offering a global perspective on embedding ethics in science and technology policy. Chapter Two compares the institutionalization of ethical debates in science, technology and innovation policy in three important regions: Europe, India and China. The third chapter explores public perceptions of science and technology in these same three regions. Chapter Four discusses public engagement in the governance of science and technology, and Chapter Five reviews science and technology governance and European values. The sixth chapter describes and analyzes values demonstrated in the constitution of the People's Republic of China. Chapter Seven describes emerging evidence from India on the uses of science and technology for socio-economic development, and the quest for inclusive growth. In Chapter

Eight, the authors propose a comparative framework for studying global ethics in science and technology. The following three chapters offer case studies and analysis of three emerging industries in India, China and Europe: new food technologies, nanotechnology and synthetic biology. Chapter 12 gathers all these threads for a comprehensive discussion on incorporating ethics into science and technology policy. The analysis is undertaken against the backdrop of different value systems and varying levels of public perception of risks and benefits. The book introduces a common analytical framework for the comparative discussion of ethics at the international level. The authors offer policy recommendations for effective collaboration among the three regions, to promote responsible governance in science and technology and a common analytical perspective in ethics.

Nuclear Waste Governance Achim Brunnengräber, Maria Rosaria Di Nucci, Ana Maria Isidoro Losada, Lutz Mez, Miranda A. Schreurs. 2015-02-19 This volume examines the national plans that ten Euratom countries plus Switzerland and the United States are developing to address high-level radioactive waste storage and disposal. The chapters, which were written by 23 international experts, outline European and national regulations, technology choices, safety criteria, monitoring systems, compensation schemes, institutional structures, and approaches to public involvement. Key stakeholders, their values and interests are introduced, the responsibilities and authority of different actors considered, decision-making processes are analyzed as well as the factors influencing different national policy choices. The views and expectations of different communities regarding participatory decision making and compensation and the steps that have been or are being taken to promote dialogue and constructive problem-solving are also considered.

Inquiring into Human Enhancement Sylvie Allouche, Jean Gayon, Michela Marzano, Jérôme Goffette. 2015-08-31 Human enhancement has become a major concern in debates about the future

of contemporary societies. This interdisciplinary book is devoted to clarifying the underlying ambiguities of these debates, and to proposing novel ways of exploring what human enhancement means and understanding what practices, goals and justifications it entails.
