Clinical Endocrinology of Dogs and Cats A. Rijnberk.2012-12-06 Clinical endocrinology is a fascinating field requiring the challenging combination of broad pathophysiological interest and specific expertise in the field of endocrinology, thereby occupying a common ground between biochemistry, physiology and clinical medicine. In the majority of cases the clinician's notion of the presence of an endocrine disease is largely based upon pattern recognition, in which physical changes play an important role. Therefore many color illustrations have been included throughout the text. In addition there are many full color graphs and illustrations of diagnostic imaging and pathology. With over 350 illustrations the book represents a richly illustrated text on the diseases of endocrine glands. For each gland there is an introductory section on the relevant morphology and physiology, followed by descriptions of the disorders of the gland. When endocrine diseases are quite different in dogs and cats, separate descriptions are given for these species. Protocols for function tests and emergency treatments are presented in the last chapters. Consequently the book provides the user with both comprehensive descriptions and quick references. The book has been written by leading clinicians in the field, with contributions from two biochemists, a radiologist and pathologist. As such a valuable textbook for veterinary students and practitioners has been compiled to fulfil the need for an up-to-date and complete book on endocrine diseases of dogs and cats.

Skin Immune System (SIS) Jan D. Bos. 1997-04-10 Immunodermatology is a field covering the majority of skin diseases, including the most prevalent ones in the general population. The Second Edition of Skin Immune System (SIS) discusses immune-mediated skin diseases and disease groups in which the SIS plays a role. It covers major findings in immunophysiology and immunopathology that have occurred since the introduction of the First Edition in 1990. As the subtitle indicates, the Second Edition adds a new emphasis on cutaneous immunology, and also includes new information on immune-based therapeutic interventions and methods, such as phototherapy and the immunological therapy of skin cancer. The book contains Part I, with introductory chapters; Part II, with descriptions of the cellular elements; and Part III, which describes the humoral and molecular components of SIS. Part IV follows to integrate the facts described in Parts II and III into concepts of pathophysiology. It contains a number of concepts entitled response patterns that describe how the constitutional elements of SIS work together. New in this edition are the descriptions of immunodermatological diseases individually described in Part V. Part VI is also all new and summarizes principles of immunotherapy.

Obesity in the Dog and Cat Martha G. Cline, Maryanne Murphy. 2019-05-07 3* Doody's Star Rating® CHOICE Magazine 'Recommended' (May 2020) As of 2018, pet obesity in the US affects an estimated 55.8 percent of dogs and 59.5 percent of cats, resulting in secondary conditions such as arthritis, diabetes mellitus, kidney disease, and certain forms of cancer. A complete and balanced diet accompanied by regular exercise is fundamental to optimize health and longevity in companion animals, meaning overweight pets have reduced quality of life and shorter life expectancy. Seeking to address this major modern-day problem, this book provides a comprehensive review of obesity in small animal medicine. Reviews epidemiology and how animal- and human-specific factors contribute to excess weight gain. Discusses the metabolic effects and inflammatory mediators associated with adiposity. Looks at various disease states and how they relate or develop as a result of obesity. Reviews different modalities to determine body composition to diagnose obesity. Offers a clinical approach to managing obesity with diet including discussion on the nutrients of concern for therapeutic weight loss diets. Veterinarians seeking to provide weight management services in practice will find clinically-applicable information from expert authors from both academic and practice backgrounds. Chapters cover topics ranging from epidemiology and pathophysiology of obesity to evaluation of body composition, and nutritional and behavioral management. The book also explores the role of exercise in managing obesity and looks at the management of co-morbidities. Finally, the authors present a range of case studies to demonstrate these topics in real-life practice.

Metabolic profiling of hyperinsulinemic horses Julien Delarocque. 2021-05-17 Insulin dysregulation mediates the increased risk for laminitis associated with the two most common equine endocrinopathies, pituitary pars intermedia dysfunction (PPID) and the equine metabolic syndrome (EMS). This thesis aimed to describe the metabolic profile of horses with this condition to help elucidate the cause for the increased insulin production it elicits and possibly uncover some pathomechanisms leading to laminitis. Besides identifying metabolites correlated to the level of the insulin response to an oral glucose test, such as carnitine, arginine and DOPA, this project revealed the potential of such molecules in recognizing horses with insulin dysregulation without complex diagnostic tests. Additionally, it allowed to concretely quantify the reduction of the insulin response to oral carbohydrates following weight loss, while differentiating the respective metabolic impact of weight gain and worsened insulin

dysregulation. Lastly, metabolites associated with subsequent laminitis were described. Altogether, the results provided new concepts for the identification of insulin dysregulation, supported an association between this condition and vascular dysfunction, helped distinguish the metabolic impact of weight variations from the effect of insulin dysregulation, and suggested that carnitine and arginine could be investigated as nutritional supplements to treat insulin dysregulation.
