Clear Thinking in a Blurry World Timothy Kenyon.2007-10-01

A ground-up Canadian text, Clear Thinking in a Blurry World offers a new way of examining the discipline of critical thinking. This text focuses on critical thinking as it applies to philosophy and cognition, rather than the typical 'formal logic lite' approach. Clear Thinking in a Blurry World includes many practical sections that are not commonly found in books in this market—material on numeracy and statistical analysis. Through this text, students will examine sources of information—from social exchanges, to science, to mainstream media—in detail, as well as the cognitive and social psychology of biases. This text aims directly at teaching, or beginning to teach, a broad set of knowledge, skills, and habits properly called critical reasoning faculties. Students using this text will enhance their ability to: - recognize and classify reliable and unreliable forms of reasoning - understand reasoning about evidence, including some central concepts of statistics and probability -anticipate the cognitive and social factors that make us susceptible to particular reasoning

very readable, up-to-date and should be extremely useful to both users and o.e.m. designers. New features of the second edition: * New section on the cycloconverter drive. * More on switched reluctance motor drives. * More on vector-controlled induction motor drives. * More on power switching devices. * New 'question and answer' sections on common problems and misconceptions. * Updating throughout. Electric Motors and Drives is for non-specialist users of electric motors and drives. It fills the gap between specialist textbooks (which are pitched at a level which is too academic for the average user) and the more prosaic 'handbooks' which are filled with useful detail but provide little opportunity for the development of any real insight or understanding. The book explores most of the widely-used modern types of motor and drive, including conventional and brushless d.c., induction motors (mains and inverter-fed), stepping motors, synchronous motors (mains and converter-fed) and reluctance motors.
