Flying beyond the stall Douglas A. Joyce.2014 The X-31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed, manufactured, and flight tested as an international collaboration. It was also the only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. Flying Beyond the Stall begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic parameter estimation, and a tailless study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information.

Pilot's Basics Gerhard Grohmann.2015-02-01 EASY TO USE RULES OF THUMB, FORMULAE AND FACTORS FOR EVERY PILOT PILOT'S BASICS is a summary of Rules of Thumb and simple formulae commonly used in aviation - basic aviation knowledge - which will enable us to perform fast, simple and accurate mental calculations. Thorough pre-flight preparation and planning is not, on its own, enough to perform a flight safely and at optimum efficiency. Continuous reanalysis of our preparation, and adjustments to the plan to match the dynamic in-flight situation, is essential throughout any flight. This is a basic requirement, whether we are flying an Ultra-Light Aircraft, or on the flight deck of a modern Jumbo Jet. During flight we continuously recalculate and estimate to confirm the accuracy of our pre-flight planning and calculations, or to fine tune them. For these re-calculations we often don't have another pilot, an FMS or even a calculator on hand to assist. Our heads and hands may be so busy that we just don't have the time for complex calculations. In these situations rules of thumb, simple formulae and approximations are extremely helpful. A quick mental calculation or estimation will free us up for more pressing duties, thereby greatly improving overall safety.
