Regulating Artificial Intelligence Dominika Ewa Harasimiuk, Tomasz Braun. 2021-02-09 Exploring potential scenarios of artificial intelligence regulation which prevent automated reality harming individual human rights or social values, this book reviews current debates surrounding AI regulation in the context of the emerging risks and accountabilities. Considering varying regulatory methodologies, it focuses mostly on EU's regulation in light of the comprehensive policy making process taking place at the supranational level. Taking an ethics and humancentric approach towards artificial intelligence as the bedrock of future laws in this field, it analyses the relations between fundamental rights impacted by the development of artificial intelligence and ethical standards governing it. It contains a detailed and critical analysis of the EU's Ethic Guidelines for Trustworthy AI, pointing at its practical applicability by the interested parties. Attempting to identify the most transparent and efficient regulatory tools that can assure social trust towards AI technologies, the book provides an overview of horizontal and sectoral regulatory approaches, as well as legally binding measures stemming from industries' self-regulations and internal policies.

Knots and Surfaces David W. Farmer, Theodore B. Stanford. 1996 In most mathematics textbooks, the most exciting part of mathematics --- the process of invention and discovery --- is completely hidden from the reader. The aim of *Knots and Surfaces* is to change all that. By means of a series of carefully selected tasks, this book leads readers to discover some real mathematics. There are no formulas to memorize; no procedures to follow. The book is a guide: its job is to start you in the right

direction and to bring you back if you stray too far. Discovery is left to you.

A Comparative Perspective on Major Social Problems Rita James Simon. 2001 In this volume Rita J. Simon brings together a clearly organized and accessible collection of scholarly essays on the world's most pressing social problems. Each of the contributors address a specific issue--gambling, prisons, alcohol, AIDS, rape, prisons, juvenile justice, abortion, and guns--by examining the institutions and laws different societies have developed for containing them. Each of the countries selected represents a range of variations in political, economic, religious/ethical/social orientations and characteristics. This comparative and interdisciplinary world perspective makes Simon's edited volume uniquely relevant to political scientists, sociologist, criminologists, psychologists and the broader audience of scholars and laypeople interested in the study of contemporary social problems.

Representations of Finite and Compact Groups Barry Simon. 1996 Barry Simon, I.B.M. Professor of Mathematics and Theoretical Physics at the California Institute of Technology, is the author of several books, including such classics as *Methods of Mathematical Physics* (with M. Reed) and *Functional Integration and Quantum Physics*. This new book, based on courses given at Princeton, Caltech, ETH-Zurich, and other universities, is an introductory textbook on representation theory. According to the author, 'Two facets distinguish my approach. First, this book is relatively elementary, and second, while the bulk of the books on the subject is written from the point of view of an algebraist or a geometer, this book is written with an analytical flavor'. The exposition in the book centers around the study of representation of certain concrete classes of groups, including permutation groups and compact semi simple Lie groups. It culminates in the complete proof of the Weyl character formula for representations of compact Lie groups and the Frobenius formula for characters of permutation groups. Extremely well tailored both for a one-year course in

representation theory and for independent study, this book is an excellent introduction to the subject which, according to the author, is unique in having 'so much innate beauty so close to the surface'.

Anthropometry and Biomechanics Ronald Easterby. 2012-12-06 Assessment of the physical dimensions of the human body and application of this knowledge to the design of tools, equipment, and work are certainly among the oldest arts and sciences. It would be an easy task if all anthropometric dimensions, of all people, would follow a general rule. Thus, philosophers and artists embedded their ideas about the most aesthetic proportions into ideal schemes of perfect proportions. Golden sections were developed in ancient India, China, Egypt, and Greece, and more recently by Leonardo DaVinci, or Albrecht Durer. However, such canons are fictive since actual human dimensions and proportions vary greatly among individuals. The different physical appearances often have been associated with mental, physiological and behavioral characteristics of the individuals. Hypocrates (about 460-377 BC) taught that there are four temperaments (actually, body fluids) represented by four body types. The psychiatrist Ernst Kretschmer (1888-1964) proposed that three typical somatotypes (pyknic, athletic, asthenic) could reflect human character traits. Since the 1940's, W. H. Sheldon and his coworkers devised a system of three body physiques (endo-, meso-, ectomorphic). The classification was originally qualitative, and only recently has been developed to include actual measurements.

Representation Theory of Algebras Raymundo Bautista, Roberto Martínez-Villa, José Antonio de la Peña. 1996 The ICRA VII was held at Cocoyoc, Mexico, in August 1994. This was the second time that the ICRA was held in Mexico: ICRA III took place in Puebla in 1980. The 1994 conference included 62 lectures, all listed in these Proceedings. Not all contributions presented, however, appear in this book. Most papers in this volume are in final form with complete proofs, with the only exception

being the paper of Leszczynski and Skowronski, Auslander algebras of tame representation type, that the editors thought useful to include.

Groups and Symmetry: A Guide to Discovering Mathematics David W. Farmer.1996 This nicely produced volume focuses on the informal analysis of geometrical patterns. By means of a series of carefully selected tasks, the book leads readers to discover some real mathematics. There are no formulas to memorize and no procedures to follow. It is a guide to start you in the right direction and bring you back if you stray too far. Discovery is left to you.

Technology Transfer and Entrepreneurial Innovations Maribel Guerrero,David Urbano.2021-06-01 Evidence suggests that economies with technology transfer initiatives provide a better supply of high-quality jobs and tend to be characterized by entrepreneurs with higher innovation contributions. This book explores the effectiveness of technology transfer policies and legislation on entrepreneurial innovation in a non-US context. It analyses the theoretical, empirical and managerial implications behind the success of technology transfer polices and legislations in stimulating entrepreneurial innovation; analyses which other contextual condition (e.g., culture) are necessary for successful implementation; and explores the extent and level of replication of US policies (e.g., Bayh-Dole Act, Small Business Innovation Research [SBIR] program) in other national and regional systems. In addition, this book looks at the effect technology transfer policies have on the adoption of open innovation and open science.

Singularities Vladimir I. Arnold, Gert-Martin Greuel, Joseph H.M. Steenbrink. 2012-12-06 In July 1996, a conference was organized by the editors of this volume at the Mathematisches Forschungsinstitut Oberwolfach to honour Egbert Brieskorn on the occasion of his 60th birthday. Most of the mathematicians invited to the conference have been influenced in one way or another by Brieskorn's work in singularity theory. It was the first time that so many people from the Russian school could be present at a conference in singularity theory outside Russia. This volume contains papers on singularity theory and its applications, written by participants of the conference. In many cases, they are extended versions of the talks presented there. The diversity of subjects of the contributions reflects singularity theory's relevance to topology, analysis and geometry, combining ideas and techniques from all of these fields, as well as demonstrating the breadth of Brieskorn's own interests. Compactifications of Symmetric Spaces Yves Guivarc'h, Lizhen Ji, John C. Taylor. 2012-12-06 The concept of symmetric space is of central importance in many branches of mathematics.

Compactifications of these spaces have been studied from the points of view of representation theory, geometry, and random walks. This work is devoted to the study of the interrelationships among these various compactifications and, in particular, focuses on the martin compactifications. It is the first exposition to treat compactifications of symmetric spaces systematically and to uniformized the various points of view. The work is largely self-contained, with comprehensive references to the literature. It is an excellent resource for both researchers and graduate students.

Six Lectures on Commutative Algebra J. Elias, J. M. Giral, Rosa M. Miró-Roig, Santiago Zarzuela. 2010-03-17 Interest in commutative algebra has surged over the past decades. In order to survey and highlight recent developments in this rapidly expanding field, the Centre de Recerca Matemàtica in Bellaterra organized a ten-days Summer School on Commutative Algebra in 1996. Lectures were presented by six high-level specialists, L. Avramov (Purdue), M.K. Green (UCLA), C. Huneke (Purdue), P. Schenzel (Halle), G. Valla (Genova) and W.V. Vasconcelos (Rutgers), providing a fresh and extensive account of the results, techniques and problems of some of the most active areas of research. The present volume is a synthesis of the lectures given by these authors. Research workers as well as graduate students in commutative algebra and nearby areas will find a useful overview of the field and recent developments in it. Reviews All six articles are at a very high level; they provide a thorough survey of results and methods in their subject areas, illustrated with algebraic or geometric examples. - Acta Scientiarum Mathematicarum Avramov lecture: ... it contains all the major results [on infinite free resolutions], it explains carefully all the different techniques that apply, it provides complete proofs (...). This will be extremely helpful for the novice as well as the experienced. - Mathematical reviews Huneke lecture: The topic is tight closure, a theory developed by M. Hochster and the author which has in a short time proved to be a useful and

powerful tool. (...) The paper is extremely well organized, written, and motivated. - Zentralblatt MATH Schenzel lecture: ... this paper is an excellent introduction to applications of local cohomology. - Zentralblatt MATH Valla lecture: ... since he is an acknowledged expert on Hilbert functions and since his interest has been so broad, he has done a superb job in giving the readers a lively picture of the theory. - Mathematical reviews Vasconcelos lecture: This is a very useful survey on invariants of modules over noetherian rings, relations between them, and how to compute them. - Zentralblatt MATH

Manifolds and Modular Forms Friedrich Hirzebruch,Thomas Berger,Rainer Jung.2013-06-29 This book provides a comprehensive introduction to the theory of elliptic genera due to Ochanine, Landweber, Stong, and others. The theory describes a new cobordism invariant for manifolds in terms of modular forms. The book evolved from notes of a course given at the University of Bonn. After providing some background material elliptic genera are constructed, including the classical genera signature and the index of the Dirac operator as special cases. Various properties of elliptic genera are discussed, especially their behaviour in fibre bundles and rigidity for group actions. For stably almost complex manifolds the theory is extended to elliptic genera of higher level. The text is in most parts self-contained. The results are illustrated by explicit examples and by comparison with well-known theorems. The relevant aspects of the theory of modular forms are derived in a separate appendix, providing also a useful reference for mathematicians working in this field.

Mathematics of the 19th Century KOLMOGOROV, YUSHKEVICH. 2013-11-11 This multi-authored effort, *Mathematics of the nineteenth century* (to be followed by *Mathematics of the twentieth century*), is a sequel to the *History of mathematics from antiquity to the early nineteenth century*, published in three volumes from 1970 to 1972. For reasons explained below, our discussion of twentieth-century mathematics ends with the 1930s. Our general objectives are identical with those stated in the preface to the three-volume edition, i. e., we consider the development of mathematics not simply as the process of perfecting concepts and techniques for studying real-world spatial forms and quantitative relationships but as a social process as well. Mathematical structures, once established, are capable of a certain degree of autonomous development. In the final analysis, however, such immanent mathematical evolution is conditioned by practical activity and is either self-directed or, as is most often the case, is determined by the needs of society. Proceeding from this premise, we intend, first, to unravel the forces that shape mathematical progress. We examine

the interaction of mathematics with the social structure, technology, the natural sciences, and philosophy. Through an analysis of mathematical history proper, we hope to delineate the relationships among the various mathematical disciplines and to evaluate mathematical achievements in the light of the current state and future prospects of the science. The difficulties confronting us considerably exceeded those encountered in preparing the three-volume edition.

The Evolution of Corporate Governance Bob Tricker.2021-01-07 In this Element the origins of corporate governance are reviewed, recognising that corporate entities have always been governed, that important developments took place in the seventeenth and eighteenth centuries, and the huge significance of the invention of the joint-stock limited liability company. The development of corporate governance in the twentieth century around the world is explored, with complex groups, private companies, and top management dominating shareholder power appearing in the Inter-war years. Some unresolved issues in both principle and practice are identified. Various theories of corporate governance are described and contrasted. The subject is seen to be in search of its paradigm and a systems theoretical relationship between the theories is suggested. The need to rethink the concept of the limited liability company is argued, and a call is made for the development of a philosophy of corporate governance.

Essential Oils in Food Preservation, Flavor and Safety Victor R. Preedy. 2015-09-28 *Essential Oils in Food Preservation, Flavor and Safety* discusses the major advances in the understanding of the Essential Oils and their application, providing a resource that takes into account the fact that there is little attention paid to the scientific basis or toxicity of these oils. This book provides an authoritative synopsis of many of the complex features of the essential oils as applied to food science, ranging from production and harvesting, to the anti-spoilage properties of individual components. It embraces a holistic approach to the topic, and is divided into two distinct parts, the general aspects and named essential oils. With more than 100 chapters in parts two and three, users will find valuable sections on botanical aspects, usage and applications, and a section on

applications in food science that emphasizes the fact that essential oils are frequently used to impart flavor and aroma. However, more recently, their use as anti-spoilage agents has been extensively researched. Explains how essential oils can be used to improve safety, flavor, and function Embraces a holistic approach to the topic, and is divided into two distinct parts, the general aspects and named essential oils Provides exceptional range of information, from general use insights to specific use and application information, along with geographically specific information Examines traditional and evidence-based uses Includes methods and examples of investigation and application

Digital Business Models Adam Jabłoński, Marek Jabłoński. 2020-10-11 By presenting the conditions, methods and techniques of monetisation of business models in the digital economy, this book combines implementation of the theoretical aspects of monetisation with the presentation of practical business solutions in this field. The scope of the book includes the relationship between the monetisation and scalability degree of business models. The book describes the place and role of the digital business ecosystem in the process of digital transformation. It demonstrates ideological and functional conditions for the use of the concept of sharing to design innovative business models while also presenting a multi-dimensional approach to the use of Big Data and their monetisation in the context of business models. *Digital Business Models* shows the place and role of ecological and social factors in building digital business models that are part of the concept of the circular economy and presents the contemporary conditions of a sustainability concept that meets the ethical challenges of doing digital business. It demonstrates how important the social factors of business model design and the creation of social value are in modern business and demonstrates. The book explores the servitisation of digital business models using digital technologies and features case studies on the effective solutions of business models that use servitisation as a factor supporting the

monetisation of business models. Written for scholars exploring the efficiency and effectiveness of business models related to contemporary concepts - Sharing Economy, Circular Economy, Network Economy, Big Data, so on - and those designing business models taking into account social aspects, it will also be of direct interest to entrepreneurship courses.

School Farms Alshimaa Aboelmakarem Farag, Samaa Badawi, Gurbinder Lalli, Maya Kamareddine. 2021-11-28 This book highlights the potential of school farms to fight hunger and malnutrition by providing access to locally produced, fresh, and healthy food as well as providing young students with educational opportunities to learn, interact with nature, and develop their skills. Hunger is one of the most pressing concerns we face today and there is a clear need to provide alternative sources of food to feed a fast-growing population. School farms offer a sustainable opportunity to produce food locally in order to feed underprivileged students who rely on school meals as an integral part of their daily diet. Approaching the concept of school farms through four themes, Problem, People, Process, and Place, the book shows how they can play an essential role in providing sustainable and healthy food for students, the critical role educational institutions can play in promoting this process, and the positive impact hands-on farming can have on students' mental and physical wellbeing. Utilizing the authors' personal hands-on experiences, and drawing on global case studies, the book provides a theoretical framework and practical guidance to help with the establishment of school farms and community-based gardening projects and an education system which promotes a sustainable and healthy approach to food, agriculture, and the environment. This book will be essential reading for students and scholars of food security, agriculture, healthy and sustainable diets, education for sustainable development, and urban studies. It will also be of great

interest to practitioners and policymakers involved in food policy, developing school and community projects, global health and international development, as well as education professionals.

Fiscal Adjustments in OECD Countries Mr. Alberto Alesina, Mr. Roberto Perotti. 1996-07-01 This paper studies how the composition of fiscal adjustments influences their likelihood of “success”, defined as a long lasting deficit reduction, and their macroeconomic consequences. We find that fiscal adjustments which rely primarily on spending cuts on transfers and the government wage bill have a better chance of being successful and are expansionary. On the contrary fiscal adjustments which rely primarily on tax increases and cuts in public investment tend not to last and are contractionary. We discuss alternative explanations for these findings by studying both a full sample of OECD countries and by focusing on three case studies: Denmark, Ireland and Italy.

Consumer Value Morris Holbrook. 2002-03-11 As shoppers, what factors influence our decision to purchase an object or service? Why do we choose one product over another? How do we attribute value as part of the shopping experience? The theme of 'serving' the customer and customer satisfaction is central to every formulation of the marketing concept, yet few books attempt to define and analyse exactly what it is that consumers want. In this provocative collection of essays, Morris Holbrook brings together a team of the top US and European scholars to discuss an issue of great importance to the study of marketing and consumer behaviour. This ground-breaking, interdisciplinary book provides an innovative framework for the study of consumer value which is used to critically examine the nature and type of value that consumers derive from the consumption experience - efficiency, excellence, status, esteem, play, aesthetics, ethics, spirituality. Guaranteed to provoke debate and controversy, this is a courageous, individualistic and idiosyncratic book which should appeal to students of marketing, consumer behaviour, cultural studies and consumption

studies.

Adaptable Embedded Systems Antonio Carlos Schneider Beck, Carlos Arthur Lang Lisboa, Luigi Carro. 2012-11-27 As embedded systems become more complex, designers face a number of challenges at different levels: they need to boost performance, while keeping energy consumption as low as possible, they need to reuse existent software code, and at the same time they need to take advantage of the extra logic available in the chip, represented by multiple processors working together. This book describes several strategies to achieve such different and interrelated goals, by the use of adaptability. Coverage includes reconfigurable systems, dynamic optimization techniques such as binary translation and trace reuse, new memory architectures including homogeneous and heterogeneous multiprocessor systems, communication issues and NOCs, fault tolerance against fabrication defects and soft errors, and finally, how one can combine several of these techniques together to achieve higher levels of performance and adaptability. The discussion also includes how to employ specialized software to improve this new adaptive system, and how this new kind of software must be designed and programmed.

Vehicular Social Networks Anna Maria Vegni, Valeria Loscrì, Athanasios V. Vasilakos. 2017-03-31 The book provides a comprehensive guide to vehicular social networks. The book focuses on a new class of mobile ad hoc networks that exploits social aspects applied to vehicular environments. Selected topics are related to social networking techniques, social-based routing techniques applied to vehicular networks, data dissemination in VSNs, architectures for VSNs, and novel trends and challenges in VSNs. It provides significant technical and practical insights in different aspects from a basic background on social networking, the inter-related technologies and applications to vehicular ad-hoc networks, the technical challenges, implementation and future trends.

Stable and Unstable Homotopy William G. Dwyer.1998 This volume presents the proceedings of workshops on stable homotopy theory and on unstable homotopy theory held at The Fields Institute as part of the homotopy program during the year 1996. The papers in the volume describe current research in the subject, and all included works were refereed. Rather than being a summary of work to be published elsewhere, each paper is the unique source for the new material it contains. The book contains current research from international experts in the subject area, and presents open problems with directions for future research.

Trends in Tourist Behavior Andrés Artal-Tur, Metin Kozak, Nazmi Kozak.2019-01-17 This book examines both how tourist behavior is being shaped by the new tourism products and segments that are appearing on the European market and how the tourist experience influences post-trip evaluation of destinations and of tourism and hospitality businesses. On this basis, practical implications and recommendations are highlighted that will help destination management organizations to improve the performance of their destinations and particular businesses. The first part of the book explores visitor engagement with a range of new products relating to sports activities and events, city tourism, wine tourism, and youth tourism. In the second part, the focus is primarily on the ways in which tourist experiences influence subsequent trip recommendations, revisiting attitudes, and reviewing behavior on social media. Other topics to be addressed include the factors affecting tourism expenditure on accommodation in World Heritage Cities and the impacts of experience on the motivation of participants in recreational sports tourism events. The book will be of interest for researchers, industry professionals, under- and postgraduate students, and others who wish to learn about new trends in tourist behavior and emerging tourism products.
