However, not all history departments have had the time, expertise and guidance which would enable them to fully explore the wide range of ways in which ICT might help them to teach their subject more effectively. This much-needed collection offers practical guidance and examples of the ways in which new technology can enhance pupil engagement in the subject, impact on knowledge retention, get pupils learning outside the history classroom, and help them to work collaboratively using a range of Web 2.0 applications. The chapters, written by experienced practitioners and experts in the field of history education and ICT, explore topics such as: how to design web interactivities for your pupils what can you accomplish with a wiki how to get going in digital video editing what to do with the VLE? making best use of the interactive whiteboard designing effective pupil webquests digital storytelling in history making full use of major history websites using social media. Using New Technologies to Enhance Teaching and Learning in History is essential reading for all trainee, newly qualified and experienced teachers of history. Rethinking Value-Added Models in Education Audrey Amrein-Beardsley.2014-04-24 Since passage of the of No Child Left Behind Act in 2001, academic researchers, econometricians, and statisticians have been exploring various analytical methods of documenting students' academic progress over time. Known as value-added models (VAMs), these methods are meant to measure the value a teacher or school adds to student learning from one year to the next. To date, however, there is very little evidence to support the trustworthiness of these models. What is becoming increasingly evident, yet often ignored mainly by policymakers, is that VAMs are 1) unreliable, 2) invalid, 3) nontransparent, 4) unfair, 5) fraught with measurement errors and 6) being inappropriately used to make consequential decisions regarding such things as teacher pay, retention, and termination. Unfortunately, their unintended consequences are not fully recognized at this point either. Given such, the timeliness of this well-researched and thoughtful book cannot be overstated. This book sheds important light on the debate surrounding VAMs and thereby offers states and practitioners a highly important resource from which they can move forward in more research-based ways.

Language and Power in Blogs Brook Bolander.2013-12-15 Language and Power in Blogs systematically analyses the discursive practices of bloggers and their readers in eight English-language personal/diary blogs. The main focus is thereby placed on ties between these practices and power. The book demonstrates that the exercise of power in this mode can be studied via the analysis of conversational control (turn-taking, speakership and topic control), coupled with research on agreements and disagreements. In this vein, it reveals that control of the floor is strongly tied not solely to rates of participation, but more strikingly to the types of contributions interlocutors make. With its detailed linguistic analyses and comprehensive theoretical and methodological treatment of language use and power, the book is interesting for researchers and students working within the domains of pragmatics, discourse analysis, text linguistics and corpus linguistics, in both offline and online settings.
