Prodigal Genius John J. O'Neill.2007-08-01 This highly detailed work captures Tesla as a scientist and as a public figure. The first, original full-length biography, first published in 1944 and long a favorite of Tesla fans, is a definitive biography of the man without whom modern civilization would not exist. His inventions on rotating magnetic fields creating AC current as we know it today, have changed the world yet he is relatively unknown. This special edition of O'Neills classic book has many rare photographs of Tesla and his most advanced inventions. Teslas eccentric personality gives his life story a strange romantic quality. He made his first million before he was forty, yet gave up his royalties in a gesture of friendship, and died almost in poverty. Tesla could see an invention in 3-D, from every angle, within his mind, before it was built how he refused to accept the Nobel Prize why Tesla clung to his theories of electricity in the face of opposition his friendships with Mark Twain, George Westinghouse and competition with Thomas Edison In this penetrating study of the life and inventions of a scientific superman, Nikola Tesla is revealed as a figure of genius whose influence on the world reaches into the far future.

Homo Roboticus An Jacobs,Michel Maus,Lynn Tytgat,Romain Meeusen,Bram Vanderborght.2019-08-05 Are robots smarter than people? Will you end up with a robot as a workmate? Will you fall head over heels in love with a robot? Will robots be given a license to kill? Do robots make good surgeons? What if athletes become robots? Would you let a robot put your grandmother to bed? Won't household robots wash your dirty linen in public? Thanks to cutting-edge technology, our living environment is changing rapidly. The combination of robotics and artificial intelligence has opened up a seemingly endless range of new possibilities, from self-driving cars to sex robots and killer bots. This technological revolution will drastically change our society, just as the industrial revolution did more than 250 years ago. How does man fit into this technological revolution? More than fifty professors and researchers have taken up this question, studying the ways in which technology can be further developed for the

benefit of mankind. The book *Homo Roboticus* collates their answers and presents an inclusive robotic agenda along with recommendations for the present and the future. *Homo Roboticus* is the work of Vrije Universiteit Brussel (VUB) think tank POINcaré and was created under the direction of An Jacobs (imec-SMIT, VUB), Lynn Tytgat (weKONEKT.brussels, VUB), Michel Maus (VUB - Bloomlaw), Romain Meeusen (MFYS, VUB), and Bram Vanderborght (Brubotics, VUB). Families Shamed Rachel Condry.2013-01-10 This book examines the experiences of relatives of those accused or convicted of serious crimes such as murder, manslaughter, rape and sex offences. A broader literature exists on prisoners' families, but few studies have looked specifically at those related to serious offenders, or considered their experience other than as prison visitors. Many of the difficulties faced by 'mundane' prisoners' families are magnified for the relatives of serious offenders, first by the length of sentence, and secondly by the seriousness and stigmatizing impact through association of the offence itself. *Families Shamed* draws upon intense qualitative research which combines long, searching interviews with the relatives of serious offenders with ethnographic fieldwork over a period of several years. The book focuses on how relatives made sense of their experiences, individually and collectively: how they described the difficulties they faced; whether they were blamed and shamed and in what manner; how they understood the offence and the circumstances which had brought it about; and how they dealt with the contradiction inherent in supporting someone and yet not condoning his or her actions. This is the first book to tell the story of serious offenders' families, the difficulties they face, and their attempts to overcome them. At the same time a focus on offenders' families also draws our attention to the ways in which women are affected by crime, illuminating the broader effects of crime and the criminal justice process on the proportionately greater number of women involved. It contributes also to wider debates about the social organization of the meanings of crime, and questions the tenability of some core policy assumptions about offenders and their families; the relationship between the state and the family, and its bearing especially on expectations about family responsibilities.

Language Proficiency in Native and Non-native Speakers Jan H. Hulstijn.2015-02-15 This book, written for both seasoned and novice researchers, presents a theory of what is called Basic and Higher Language Cognition (BLC and HLC), a theory aimed at making some fundamental issues concerning first and second language learning and bilingualism (more) empirical. The first part of the book provides background for and explication of the theory as well as an agenda for future research, while the second part reports on selected studies of language proficiency in native speakers, as well as non-native speakers, and studies of the relationship between literacy in a first and second language. Conceptual and methodological problems in measuring language proficiency in research on second language acquisition and bilingualism are also discussed. Further, the notion of levels of language proficiency, as rendered by the Common European Framework of Reference for Languages (CEFR), is critically examined, suggesting ways of empirically investigating a number of questions that the CEFR raises but is not capable of answering.

Redefining Geometrical Exactness Henk J.M. Bos.2012-12-06 In his *Géométrie* of 1637 Descartes achieved a monumental innovation of mathematical techniques by introducing what is now called analytic geometry. Yet the key question of the book was foundational rather than technical: When are geometrical objects known with such clarity and distinctness as befits the exact science of geometry? Classically, the answer was sought in procedures of geometrical construction, in particular by ruler and compass, but the introduction of new algebraic techniques made these procedures insufficient. In this detailed study, spanning essentially the period from the first printed edition of Pappus' Collection (1588, in Latin translation) and Descartes' death in 1650, Bos explores the current ideas about construction and geometrical exactness, noting that by the time Descartes entered the field the incursion of algebraic techniques, combined with an increasing uncertainty about the proper means of geometrical problem solving, had produced a certain impasse. He then analyses how Descartes transformed geometry by a redefinition of exactness and by a demarcation of geometry's proper subject and procedures in such a way as to incorporate the use of algebraic methods without destroying the true nature of geometry. Although mathematicians later essentially discarded Descartes' methodological convictions, his influence was profound and pervasive. Bos' insistence on the foundational aspects of the *Géométrie* provides new insights both in the genesis of Descartes' masterpiece and in its significance for the development of the conceptions of mathematical exactness.

Storying Later Life Gary Kenyon, Ernst Bohlmeijer, William L. Randall. 2010-12-20 In its brief but vigorous history, gerontology has spawned a broadening range of specializations. One of the newest of such specializations is narrative gerontology, so named for its emphasis on the biographical, or inside, dimensions of the experience of aging. Telling stories about our world, our relationships, and ourselves is fundamental to how we make meaning. Everything from our history to our religion and our memories to our emotions is linked to the tales we tell ourselves, and others, about where we have come from and where we are going. They are central to who we are. The biographical side of human life is every bit as critical to fathom as the biological side, if we seek a more balanced, positive, and optimistic perspective on what aging is about; if we would honor the dignity and complexity, the humanity and uniqueness of the lives of older persons, no matter what their health or economic standing. In this respect, a narrative approach is particularly suited to the exploration of such topics as meaning, spirituality, and wisdom, and the connections they share. This volume reflects a selection of new directions and insights, and constitutes a general broadening and deepening of narrative gerontology, exploring its implications for theory and research in the field of aging, and for the quality of life of older adults themselves. Such deepening indicates a greater refinement of thought, method, and intervention. The evolution of narrative gerontology is also evidenced by a significant increase in the number of faculty and graduate students engaged in research in this area, as well as by increasing collaboration among researchers, practitioners, and administrators in applying narrative insights to contexts such as long term care - indeed, healthcare in general. These initiatives have given rise to the phrase, narrative care as core care.

You're called Angus Gust, you couldn't be more ordinary and you live in the most boring town in the world. One day, you walk into your bedroom, smell something nasty, look around and suddenly notice a mummy lying in your bed. What would you do? Yes, you would be scared to death, of course. And you would close your eyes, count to ten and be sure it would be gone. But just imagine that after ten seconds, it would still be there... And after twenty seconds too...! What would you do then? Angus quickly got the tweezers out of the first aid kit and his father used them to grasp the final strip. Alright, here we go, he said. Maybe it won't be as bad as all that. Then he lifted up the last flap. It was as bad as all that. They scared themselves to death. Whumpy dumpman, he'll never get a girlfriend, Nick whispered. Disgusting, Angus shuddered.

Motivation and Learning Strategies for College Success Myron H. Dembo, Helena Seli. 2004-03-05 A motivation and learning strategies textbook that bridges research and practice! *Motivation and Learning Strategies for College Success, Second Edition* teaches college students how to become more self-directed learners. Study skills are treated as a serious academic course. Students learn about human motivation and learning as they improve their study skills. The text does not offer recipes for success or lists of quick tips. Rather, the focus is on relevant information and features designed to help students to identify the components of academic learning that contribute to high achievement, to master and practice effective learning and study strategies, and then to complete self-management studies whereby they are taught a process for improving their academic behavior. A framework organized around six components related to academic success (motivation, methods of learning, time management, control of the physical and social environment, and performance) makes it easy for students to understand what they need to do to become more successful in the classroom. The text combines an overview of theory and research, to help learners understand what factors determine or influence successful learning and why they are asked to use different study and learning strategies in the text, with field-tested exercises, follow-up activities, and appendices that assist students in observing and changing their own behavior. A separate Instructor's Manual provides helpful information for teaching the material; includes additional exercises and experiences for students; provides both objective and essay test questions; and includes information on how students can maintain a portfolio to demonstrate their acquisition of learning and study skills and guidelines for helping students complete a self-management study of their own behavior.
