Polare Perfluoralkylcarbonsäuren Joachim Janda. 2019-09-09 Polyfluorierte Alkylsubstanzen können in der Umwelt zu persistenten, perfluorierten Carbonsäuren (PFCA) abgebaut werden. Joachim Janda stellt die Entwicklung einer einfachen und robusten, spurenanalytischen Methode vor, mit der neben den üblicherweise analysierbaren PFCA auch die beiden polarsten Vertreter, Trifluoressigsäure und Perfluorpropansäure, untersucht werden können. Zudem präsentiert der Autor eine Modifikation des sog. „TOP-Assays“, um bei summarischen PFC-Analysen von Bodenproben auch diese polaren PFCA zu erfassen. Es wird auf potenzielle Fallstricke und Fehlerquellen eingegangen und eine umfassende Validierung vorgenommen. Die Methoden werden u. a. bei Analysen von PFCA in Grundwasserproben und der indirekten Bestimmung von PFC-Präkursor-Konzentrationen in Bodenprofilen angewendet. Der Autor: Joachim Janda hat sich über sechs Jahre mit Spurenanalytik von Kontaminanten und Pflanzenschutzmittelrückständen in Lebens-

und Futtermitteln befasst. Danach folgten über vier Jahre, in denen er sich umweltanalytischen Fragestellungen gewidmet hat. Inzwischen ist er im Stoffwechsellabor des Universitätsklinikums Heidelberg tätig und befasst sich mit der Analyse von Biomarkern.

Biomass to Biofuels Alain A. Vertes, Nasib Qureshi, Hideaki Yukawa, Hans P. Blaschek. 2011-08-24 Focusing on the key challenges that still impede the realization of the billion-ton renewable fuels vision, this book integrates technological development and business development rationales to highlight the key technological developments that are necessary to industrialize biofuels on a global scale. Technological issues addressed in this work include fermentation and downstream processing technologies, as compared to current industrial practice and process economics. Business issues that provide the lens through which the technological review is performed span the entire biofuel value chain, from financial mechanisms to fund biotechnology start-ups in the biofuel arena up to large green field manufacturing projects, to raw material farming, collection and transport to the bioconversion plant, manufacturing, product recovery, storage, and transport to the point of sale. Emphasis has been placed throughout the book on providing a global view that takes into account the intrinsic characteristics of various biofuels markets from Brazil, the EU, the US, or Japan, to emerging economies as agricultural development and biofuel development appear undissociably linked.

A Scenario Tree-Based Decomposition for Solving Multistage Stochastic Programs Debora Mahlke.2011-01-30 Motivated by practical optimization problems occurring in energy systems with regenerative energy supply, Debora Mahlke formulates and analyzes multistage stochastic mixed-integer models. For their solution, the author proposes a novel decomposition approach which relies on the concept of splitting the underlying scenario tree into subtrees. Based on the formulated models from energy production, the algorithm is computationally investigated and the numerical results are discussed.

Mapping Forestry Peter James Eredics.2010 Mapping Forestry describes how geographic information system (GIS) software supports the business of forestry in today's era of economic changes, increased global competition, and diminishing resources. In twenty scenarios from the United States, Germany, Brazil, Romania, Finland, and Cambodia, foresters share how they use GIS to manage commercial operations and sustainable stewardship. Forest managers tell how computer-generated maps and GIS analysis help them determine the best places to build roads, whether logging in a particular area is commercially feasible, which fire-damaged areas should be restored first, and more. The Language of Paper Therese Weber.2008 As the technology propagated, paper effected profound changes in each society it touched, becoming one of the most important of all cultural media, a status that it retains to the present. Paper accrues value as religious and symbolic markings are added to its surface; fortune papers transport messages to the gods, paper is given the value of

money in the form of banknotes, and the dream of flying was first realised in hot-air balloons made of paper. Paper can even be employed as architectural elements, as textiles for garments, and as a medium for artistic expression. In one or many of these manifestations, paper affects the lives of all on earth today. In this cultural history of paper, acclaimed paper artist Therese Weber travels to the few remaining places where traditional methods of papermaking have been preserved. Commencing there Weber takes the reader on a fascinating and colourful journey of discovery of a commodity that many may take for granted, but few fully understand.
