Petroleum Geology of Myanmar A. Racey,M.F. Ridd .2015-09-18 With the social, political and economic changes taking place in Myanmar (formerly Burma) there is a keen interest among international resource companies to explore opportunities for investment in the country. As early as the 1700s oil was being produced onshore from deep, hand-dug wells and was exported as far afield as India. But in the petroleum sector the most dramatic change has been the discovery offshore of major gasfields. The present volume is the first to bring together information on the offshore as well as the onshore petroleum geology. The readership is likely to include not only those in the petroleum industry seeking an overview of the habitat of Myanmar's oil and gas, but also researchers in the broader field of SE Asian geology. As in many parts of the world, it has been the petroleum industry that has provided data of value to stratigraphers, structural geologists and those seeking to decipher the tectonic history of the region.

Applied Geology of Oil and Gas Marsel Kadyrov.2018-10-31 This collection of articles is the result of complex studies for several years in the area of applied geology and development of oil and gas fields. The materials of the collection can be useful for engineers, scientists, teachers, post-graduate students and students of geological study programs of higher educational institutions.

Petroleum Geology of the Black Sea M. D. Simmons,G. C. Tari,Aral I. Okay.2018 The Black Sea remains one of the largest underexplored rift basins in the world. Future success is dependent on a better understanding of a number of geological uncertainties. These include reservoir and source rock presence and quality, and the timing of migration of hydrocarbons relative to trap formation. An appreciation of the geological history of the Black Sea basins and the surrounding orogens is therefore key. The timing of basin formation, uplift of the margins, and of facies distribution remain issues for robust debate. This text presents the results of 15 studies that relate to the tectono-stratigraphy and petroleum geology of the Black Sea. The methodologies of these studies encompass crustal structure, geodynamic evolution, stratigraphy and its regional correlation, petroleum systems, source to sink, hydrocarbon habitat and play concepts, and reviews of past exploration.

Geology of Gas and Oil under the Netherlands H.E. Rondeel,D.A.J. Batjes,W.H. Nieuwenhuijs.2012-12-06 Contains 21 papers on the petroleum geology of the Netherlands, combining work by the industry, the Geological Survey and universities. The wide range of topics presented includes reservoir characterization through 3D seismic and borehole log evaluation of single oil and gas fields, as well as reviews of the hydrocarbon habitat in the West Netherlands Basin and of the regional Rotliegend facies distribution. Published in association with the Royal Geological and Mining Society of the Netherlands (KNGMG), which hosted the 1993 International Conference in the Hague of the American Association of Petroleum Geologists. The papers were prepared for this conference. Audience: Staff engaged in hydrocarbon exploration and production in the North Sea area. Others who need to know about the results of this exploration and production in the Netherlands.

Global Neoproterozoic Petroleum Systems Jonathan Craig.2009 Worldwide, Neoproterozoic successions are major hydrocarbon producers. In North Africa, large basins with significant surface outcrops and thick sedimentary fills are widespread. These basins are now emerging as potential sources of hydrocarbons and are attracting interest both from geological researchers and the oil and gas industry. This volume focuses on recent developments in the understanding and correlation of North African basin fills and explores novel approaches to prospecting for source and reservoir rocks. The papers cover aspects of petroleum prospectivity and age-equivalent global petroleum systems, Neoproterozoic tectonics and palaeogeography, sequence stratigraphy, glacial events and global climatic models, faunal and floral evolution and the deposition of early source rocks. The broader aim is to compare with, and learn from, well-studied Neoproterozoic successions globally, including major environmental change, the emergence of life, the global carbon cycle and implications for hydrocarbon exploration.

Petroleum Geoscience of the West Africa Margin T. Sabato Ceraldi,R. A. Hodgkinson,G. Backe.2017-01-05 The West African margin has enjoyed a rich and varied exploration history, remaining an exciting region for hydrocarbon discovery. Fusion of traditional approaches, imaginative ideas, leveraged with modern technologies is still yielding success. This volume examines the margin from regional to pore-scale, from surface-processes to deep crustal levels, drawing on input from academia and industry.

Hydrocarbon Exploration to Exploitation West of Shetlands S.J.C. Cannon ,D. Ellis .2014-06-09 This volume addresses the challenges facing explorers and developers alike in a region that is becoming a major focus of the petroleum industry in the United Kingdom, Faroes and North Norway. Several West of Shetland fields are still in the appraisal phase almost a decade after discovery. Sub-volcanic exploration risks remain high: sub-volcanic structural traps are imaged poorly, and so the geophysical community is responding with the application of latest technology. The more simple reservoirs might not be large enough to prompt informed and speedy development decisions; larger fields might have a combination of complexities, requiring a phased approach to the development. Infrastructure has been slow to arrive and planned developments have been subject to dramatic swings in fiscal regime ranging from special allowances to unexpected tax increases. Environmental challenges are significant when moving into more remote, deeper water. The perception of these challenges by the third parties has become much more acute. To sustain its right to operate, the industry has to demonstrate safe drilling operations and appropriate response capability with government agencies.

Sequence Stratigraphy in Offshore South African Divergent Basins Leonard Franklin Brown.1995 The fundamental conceptual advancements in the field of sequence stratigraphy are now impacting most branches of academic and applied sedimentary geology, providing powerful tools for predicting the spatial location, lithogenesis, and stratigraphic succession of depositional systems. In 1987, Soekor Ltd. undertook ambitious regional seismic and sequence stratigraphy studies of three offshore South African basins in support of a major drilling program; the results of this five-year program are shared here--for explorationists who plan to prospect in South African basin, as well as those considering the validity of applying sequence stratigraphy concepts and methods in basins with different tectonic histories. Structural and Tectonic Modelling and its Application to Petroleum Geology R.M. Larsen,H. Brekke,B.T. Larsen,E. Talleraas.2013-10-22 This monograph presents a unique combination of structural and tectonic modelling with applied petroleum geological problems. Focussing on the Norwegian Continental Shelf and neighbouring areas, it includes discussion covering all scales - from development of sedimentary basins, to formation of fractures and joints on a microscale - and from exploration, to the exploitation of hydrocarbons. The book's coverage of structural and tectonic modelling, petroleum geology applications, and the treatment of the Norwegian Continental Shelf should make this book an invaluable resource book for advanced students of structural and tectonic modelling, teachers, and researchers; as well as for geologists and geophysicists in the petroleum industry.
