Policy Change in the EU's Immediate Neighbourhood Tanja A. Börzel.2012 This edited volume analyzes the EU's influence on policy changes in neighborhood countries in Southeast Europe, Turkey, Eastern Europe, the Southern Caucasus, and the southern Mediterranean. The book develops short-, medium-, and long-term policy recommendations on how the EU can improve its support of reforms concerning societal, economic, and political issues. In doing this, it tackles policies, such as democracy promotion, environmental policy, visa facilitation, regulatory convergence with the internal market, political decentralization for conflict resolution, and the role of civil society in these reform processes. Overall, the book encourages the EU to design its policies to be more target group oriented and to extend the circle of actors addressed to include non-state actors. Sense-making: Problematizing Constructs of Literacy for 21st Century Education Marilyn J. Narey,Kelli Jo Kerry-Moran.2021-03-15 This book is a rich, yet highly accessible volume that details an exciting and much-needed inquiry into the notion of literacy: what it is, why it is, and how it might be framed most effectively for 21st century education. The chapters unfold in a creative interplay of practice and theory. Narey's insightful questioning into the socio-historical-cultural implications of "literacy as empowerment" establishes the critical context, while Kerry-Moran's examination of the burgeoning literacy landscape reveals challenges for teacher education. Drawing upon classic and cutting-edge theories, Narey builds a provocative and powerful case for a 21st century construct of literacy as sense-making: sense as relative to the senses (i.e., sight, hearing) and sense as making meaning. Her innovative model of the literacy event opens up a range of potential foci for analysis and facilitates her teasing out of two critical areas for instruction: sensory perception and aesthetic knowledge. This theoretical sense-making lens is applied to Kerry-Moran's teacher education classroom as the authors reflect upon further development. As a timely original and thought-provoking work, this slim volume of big ideas promises to be a valuable resource for teacher educators and other scholars who seek a clear and cohesive frame for literacy in 21st century education. This is a very well written scholarly text that provides a new and important theory of 21st century literacy. Narey's sketches of literacy as sense-making are laid out in logical form, building upon researched and referenced sources to ground her ideas and offering the reader information, examples and new insights. In addition to providing many significant perspectives underpinning her new theory, Narey provides excellent historical and current explanations about literacy from highly respected researchers in the field. The inclusion of a practical application of Narey's conceptual/theoretical framework to Kerry-Moran's example of an instructional unit in a teacher education course is helpful to understanding the theory in practice. The references throughout the work are extensive, comprehensive and very well documented. This text, *Sense-making: Problematizing Constructs of Literacy for 21st Century Education*, contributes original thinking to the field of literacy and learning and would be an excellent resource for literacy and language professors or instructors in a post-graduate or professional development program. Logic Functions and Equations Christian Posthoff,Bernd Steinbach.2013-03-19 Logic functions and equations are (some of) the most important concepts of Computer Science with many applications such as Binary Arithmetics, Coding, Complexity, Logic Design, Programming, Computer Architecture and Artificial Intelligence. They are very often studied in a minimum way prior to or together with their respective applications. Based on our long-time teaching experience, a comprehensive presentation of these concepts is given, especially emphasising a thorough understanding as well as numerical and computer-based solution methods. Any applications and examples from all the respective areas are given that can be dealt with in a unified way. They offer a broad understanding of the recent developments in Computer Science and are directly applicable in professional life. *Logic Functions and Equations* is highly recommended for a one- or two-semester course in many Computer Science or computer Science-oriented programmes. It allows students an easy high-level access to these methods and enables sophisticated applications in many different areas. It elegantly bridges the gap between Mathematics and the required theoretical foundations of Computer Science.

What She Wants Cathy Kelly.2009-07-07 Ireland's #1 bestselling author Cathy Kelly weaves a heartwarming tale about a group of friends who discover that when life gets comfortable, unexpected surprises are just around the corner. Do you know what you'll be doing next year? Three friends—Hope, Sam, and Virginia—all thought they did. Hope would still be slogging it out as a working mom, snatching quality time with husband Marc and her two small children. Her sister Sam was going to be the acclaimed boss of a record label, turning heads as the toughest, most brilliant music mogul around. Virginia would be planning her dream retirement home with her beloved husband Bill and doting on their little granddaughter. But destiny had other plans for them. Suddenly everything drastically changes for each of the three women, and they have to look deep within themselves to find out what they really want from life. And in surviving the turmoil ahead, they will discover that a loving family and good friends make all the difference....

Frontiers in General Relativity Peter A. Hogan,Dirk Puetzfeld.2021-03-31 This book discusses some of the open questions addressed by researchers in general relativity. Photons and particles play important roles in the theoretical framework, since they are involved in analyzing and measuring gravitational fields and in constructing mathematical models of gravitational fields of various types. The authors highlight this aspect covering topics such as the construction of models of Bateman electromagnetic waves and analogous gravitational waves, the studies of gravitational radiation in presence of a cosmological constant and the gravitational compass or clock compass for providing an operational way of measuring a gravitational field. The book is meant for advanced students and young researchers in general relativity, who look for an updated text which covers in depth the calculations and, equally, takes on new challenges. The reader, along the learning path, is stimulated by provocative examples interspersed in the text that help to find novel representations of the uses of particles and photons.

A Brief History of the Smile Angus Trumble.2004 From the enlightened smile of the Holy Buddha to the lewd leer of the seventeenth century Dutch chicken groper, from the sociological to the scatological, Angus Trumble presents a uniquely readable and erudite insight into the cultural, physiological, artistic and literary history of that most universal of human expressions, the smile.;

Essays in Contemporary Chemistry Gerhard Quinkert.2001 In this volume, internationally renowned chemists recount their roles in the progress of chemistry research toward elucidation of biological processes. Beginning with a historical perspective on the development of X-ray crystallography, the reader is regaled with first-hand accounts of research milestones. Included are descriptions of the cutting-edge nuclear-magnetic-resonance and electron-paramagnetic-resonance spectroscopic techniques, the dynamics of ultra-fast reactions, and the central problem of molecular oxygen activation in biological processes. The roles of chiral auxiliaries in organic synthesis and of photochemistry in natural product synthesis are told, and innovations in combinatorial synthesis approaches are described. Contemporary issues in molecular recognition and modulation of molecular function are addressed, concluding with a missive regarding how the frontiers of medical ethics may be breached by molecular manipulations. The contributors, who number among the finest scientists in the world, including two Nobel Prize winners, are Peter B. Dervan, Jack D. Dunitz, Christian Griesinger, Jean-Marie Lehn, Thomas F. Prisner, Gerhard Quinkert, Peter G. Schultz, Helmut Schwarz, Dieter Seebach, and Ahmed Zewail. Additionally, there is a prologue by Albert Eschenmoser, for whom this collection was conceived, and an epilogue that contains facsimiles of notes from his landmark lecture 'Synthesis of Co-Enzyme B12: A Vehicle for Teaching Organic Synthesis'. This book is definitely a must for all who want to read, or to read again, where we stand in our chemical comprehension of the fascinating relationship between chemical structure and biological processes, how we got here, and what the future might hold.

Advances in Fluid Mechanics and Turbomachinery Hans J. Rath, Christoph Egbers.2012-12-06 The papers in this volume are mostly in the area of computational fluid dynamics (CFD). Furthermore, to some extent this volume contains also contributions from the field of new experimental methods and diagnostics applied to fluid dynamics, combustions and turbomachinery. The contributed papers cover diverse topics such as pipe flows, shock tube flows, compressor flows as well as velocity and turbulence measurements of flow conditioners. There is also a survey article on recent flow computations on high performance computers. Articles are also devoted to liquid-liquid systems, rotating fluid flows and combustion diagnostics.

An Introduction to Continuous-Time Stochastic Processes Vincenzo Capasso, David Bakstein.2008-01-03 This concisely written book is a rigorous and self-contained introduction to the theory of continuous-time stochastic processes. Balancing theory and applications, the authors use stochastic methods and concrete examples to model real-world problems from engineering, biomathematics, biotechnology, and finance. Suitable as a textbook for graduate or advanced undergraduate courses, the work may also be used for self-study or as a reference. The book will be of interest to students, pure and applied mathematicians, and researchers or practitioners in mathematical finance, biomathematics, physics, and engineering.

Four Meditations on Happiness Michael Hampe.2014-01-01 In this original and thought-provoking book, philosopher Michael Hampe sets out to help us understand happiness. The right and proper path to a happy life is a topic that has been debated for millennia. There are many theories, from those of ancient philosophy to those of modern neuroscience, but can any one of them ultimately tell us how the objective of a perfectly fulfilled life might be achieved? By telling the story of two friends—the unhappy philosopher Stanley Low and the happy gardener Gabriel Kolk—alongside a presentation of four essays that examine prominent and very plausible theories of happiness, Michael Hampe illustrates that there is no easy answer to our search for unadulterated bliss. This is an erudite and illuminating investigation into one of mankind's most elusive quests, one that allows us to reconsider what it means to be happy.

Hannah Massey / the Fifteen Streets Catherine Cookson.1999 HANNAH MASSEY Proud and canny, ignorant and intensely ambitious, Hannah Massey is a born ruler. Her kingdom may be only a working-class household in County Durham, but within its walls her iron will governs a predominantly male family and her word is unchallengeable law. Now, in late middle age, her ambition is still not satisfied. She wants to see her brood living in the house where she was in service as a young girl. The apple of Hannah's eye is her pretty younger daughter, Rosie, who has just returned home after a spell in London. Rosie had gone south, so Hannah thought, to escape the passionate pursuit of a young man she had known for most of her life. Her return is shrouded in mystery and evasions, and when the truth does come out, Hannah's world is torn apart. THE FIFTEEN STREETS Life in the Fifteen Streets was tough - a continual struggle for survival. Some families gave up and descended into a dismal state of grinding poverty. Others, like the O'Briens - and especially John O'Brien - fought grimly for a world they were only rarely allowed to glimpse. John O'Brien caught his 'glimpse' on the day he met Mary Llewellyn. Mary, with her slim body and soft brown hair; Mary, who lived well, had beautiful clothes - who worked because she wanted to, not because she had to... When John O'Brien fell in love with Mary Llewellyn, he knew there was a gulf between them that nothing could bridge - it was the gulf of the Fifteen Streets.

Language Contact across the North Atlantic P. Sture Ureland, Iain Clarkson.2011-09-08 This volume contains a selection of papers which have been revised and extended for publication from two working groups held at conferences at Galway (1992) and Göteborg (1993) which celebrated the quincentenary of Columbus' discovery of America in 1492. The pre-Columbian period of language contact is covered by articles on Old Norse in the Faroes, Scotland and Ireland, the Shetland dialect and Norn, and placenames in Iceland and Greenland. The articles on the post-Columbian period are wide-ranging and cover, in the Scandinavian context, the Scandinavian emigration, American Swedish, American Finnish, Swedish-Spanish and various aspects of Norwegian in America and also in Spitzbergen; in the British colonial context, English dialects in New England, Scottish Gaelic in Nova Scotia and Scots in North America (Maryland, the Appalachians and Virginia); in the context of the later continental mass emigration, American Dutch, Texas German, Croatian and Italian. Two papers deal with reverse emigration, that of Sicilian and Calabrian dialects, and the special case of Krio in Sierra Leone.

50 Years Porsche 914 J. Lewandowski.2019 The Porsche 911's little brother... In 1969 a very special sports car was born. The 914 rose from a marriage of convenience of Volkswagen and Porsche, because both companies wanted a small, modern and affordable sports car in their product

range, but for little cost. Thus, it was decided to combine the skills of both manufacturers. The result was a light mid-engine sports car with a lively road performance and even 50 years after its launch, it pleases the eye with a fresh design. Back then it was often ridiculed as a 'housewife Porsche' or 'Volks-Porsche', but now, the 914 has come out of the shadow of its big brother the 911 and has a huge fan base; today it lives on in the Boxster and Cayman models. This volume includes: the result of thorough research in the Porsche and VW archives; rich photography; all technical data; development, production, model history and racing appearances.

Chemokines Nuska Tschammer. 2015-03-02 Medicinal chemistry is both science and art. The science of medicinal chemistry offers mankind one of its best hopes for improving the quality of life. The art of medicinal chemistry continues to challenge its practitioners with the need for both intuition and experience to discover new drugs. Hence sharing the experience of drug research is uniquely beneficial to the field of medicinal chemistry. Drug research requires interdisciplinary team-work at the interface between chemistry, biology and medicine. Therefore, the topic-related series Topics in Medicinal Chemistry covers all relevant aspects of drug research, e.g. pathobiochemistry of diseases, identification and validation of (emerging) drug targets, structural biology, drugability of targets, drug design approaches, chemogenomics, synthetic chemistry including combinatorial methods, bioorganic chemistry, natural compounds, high-throughput screening, pharmacological in vitro and in vivo investigations, drug-receptor interactions on the molecular level, structure-activity relationships, drug absorption, distribution, metabolism, elimination, toxicology and pharmacogenomics. In general, special volumes are edited by well known guest editors.

Seismic Data Interpretation and Evaluation for Hydrocarbon Exploration and Production Niranjana C. Nanda. 2016-03-10 This book introduces readers to the field of seismic data interpretation and evaluation, covering themes such as petroleum exploration and high resolution seismic data. It helps geoscientists and engineers who are practitioners in this area to both understand and to avoid the potential pitfalls of interpreting and evaluating such data, especially the over-reliance on sophisticated software packages and workstations alongside a lack of grasp on the elementary principles of geology and geophysics. Chapters elaborate on the necessary principles, from topics like seismic wave propagation and rock-fluid parameters to seismic modeling and inversions, explaining the need to understand geological implications. The difference between interpretation of data and its evaluation is highlighted and the author encourages imaginative, logical and practical application of knowledge. Readers will appreciate the exquisite illustrations included with the accessibly written text, which simplify the process of learning about interpretation of seismic data. This multidisciplinary, integrated and practical approach to data evaluation will prove to be a valuable tool for students and young professionals, especially those connected with oil companies.

Thin Film and Flexible Thermoelectric Generators, Devices and Sensors Sergey Skipidarov, Mikhail Nikitin. 2021-03-13 This book presents and facilitates new research and development results with hot topics in the thermoelectric generators (TEGs) field. Topics include: novel thin film; multilayer, composite and nanostructured thermoelectric materials; simulation of phenomena related to thermoelectricity; thermoelectric thin film and multilayer materials manufacturing technologies; measurement techniques for characterization; thermoelectric generators; and the simulation, modeling, design, thermal, and mechanical degradation problems. This book helps researchers tackle the challenges that still remain in creating cheap and effective TEGs and presents the latest trends and technologies in development and production of advanced thermoelectric generation devices.

Just make sure that when you're on Feedbooks' site you head to the "Public Domain" tab to avoid its collection of "premium" books only available for purchase. Since it's a search engine, browsing for books is almost impossible. The closest thing you can do is use the Authors dropdown in the navigation bar to browse by authors—and even then, you'll have to get used to the terrible user interface of the site overall.
