Ensuring Safe Food Committee to Ensure Safe Food from Production to Consumption, Institute of Medicine, Board on Agriculture, Institute of Medicine and National Research Council. 1998-09-02 How safe is our food supply? Each year the media report what appears to be growing concern related to illness caused by the food consumed by Americans. These food borne illnesses are caused by pathogenic microorganisms, pesticide residues, and food additives. Recent actions taken at the federal, state, and local levels in response to the increase in reported incidences of food borne illnesses point to the need to evaluate the food safety system in the United States. This book assesses the effectiveness of the current food safety system and provides recommendations on changes needed to ensure an effective science-based food safety system. Ensuring Safe Food discusses such important issues as: What are the primary hazards associated with the food supply? What gaps exist in the current system for ensuring a safe food supply? What effects do trends in food consumption have on food safety? What is the impact of food preparation and handling practices in the home, in food services, or in production operations on the risk of food borne illnesses? What organizational changes in responsibility or oversight could be made to increase the effectiveness of the food safety system in the United States? Current concerns associated with microbiological, chemical, and physical hazards in the food supply are discussed. The book also considers how changes in technology and food processing might introduce new risks. Recommendations are made on steps for developing a coordinated, unified system for food safety. The book also highlights areas that need additional study. Ensuring Safe Food will be important for policymakers, food trade professionals, food producers, food processors, food researchers, public health professionals, and consumers.

Teaching with Poverty in Mind Eric Jensen. 2010-06-16 In Teaching with Poverty in Mind: What Being Poor Does to Kids' Brains and What Schools Can Do About It, veteran educator and brain expert Eric Jensen takes an unflinching look at how poverty hurts children, families, and communities across the United States and demonstrates how schools can improve the academic achievement and life readiness of economically disadvantaged students. Jensen argues that although chronic exposure to poverty can result in detrimental changes to the brain, the brain's very ability to adapt from experience means that poor children can also experience emotional, social, and academic success. A brain that is susceptible to adverse environmental effects is equally susceptible to the positive effects of rich, balanced learning environments and caring relationships that build students' resilience, self-esteem, and character. Drawing from research, experience, and real school success stories, Teaching with Poverty in Mind reveals * What poverty is and how it affects students in school; * What drives change both at the macro level (within schools and districts) and at the micro level (inside a student's brain); * Effective strategies from those who have succeeded and ways to replicate those best practices at your own school; and * How to engage the resources necessary to make change happen. Too often, we talk about change while maintaining a culture of excuses. We can do better. Although no magic bullet can offset the grave challenges faced daily by disadvantaged children, this timely resource shines a spotlight on what matters most, providing an inspiring and practical guide for enriching the minds and lives of all your students.

The School-to-Prison Pipeline Nancy A. Heitzeg. 2016-04-11 This book offers a research and comparison-driven look at the school-to-prison pipeline, its racial dynamics, the connections to mass incarceration, and our flawed educational climate—and suggests practical remedies for change. How is racism perpetuated by the education system, particularly via the school-to-prison pipeline? How is the school to prison pipeline intrinsically

connected to the larger context of the prison industrial complex as well as the extensive and ongoing criminalization of youth of color? This book uniquely describes the system of policies and practices that racialize criminalization by routing youth of color out of school and towards prison via the school-to-prison pipeline while simultaneously medicalizing white youth for comparable behaviors. This work is the first to consider and link all of the research and data from a sociological perspective, using this information to locate racism in our educational systems; describe the rise of the so-called prison industrial complex; spotlight the concomitant expansion of the medical-industrial complex as an alternative for controlling the white and well-off, both adult and juveniles; and explore the significance of media in furthering the white racial frame that typically views people of color as criminals as an automatic response. The author also examines the racial dynamics of the school to prison pipeline as documented by rates of suspension, expulsion, and referrals to legal systems and sheds light on the comparative dynamics of the related educational social control of white and middle-class youth in the larger context of society as a whole.

Biodegradable Polymeric Nanocomposites Dilip Depan.2015-10-22 How Can Polymers Constructed From Living Organisms Help Eliminate the Disposal Issue? A unique category of materials called biodegradable polymers could help remedy a growing environmental concern. Biodegradable Polymeric Nanocomposites: Advances in Biomedical Applications considers the potential of biodegradable polymers for use in biomedical applications that include drug delivery, biosensors, and tissue engineering. Since biomaterials perform on a time-limited function and are designed to disappear from the body after use, the development of biopolymers could greatly reduce and eliminate the need for plastic products, most specifically those used in biomedical applications. Highlights Biomaterials and the Design and Application of Biomaterials Utilizing expert research contributors from around the world, this book considers the benefits and limitations of a variety of biomaterials, such as biopolymers, ceramics, biodegradable nanocomposites, and natural products-based biomaterials. It explores the bio-nano-interface; the interaction between nanoparticles and biomaterials, explains the basic concepts and methods of biodegradable nanocomposites (BNCs), and highlights recent developments in polymer-based bionanocomposites. The book provides an overview of degradation properties and the mechanical properties of biodegradable polymers. It also breaks down the mechanical properties and biocompatibility of starch-based polymers, and outlines distinct advantages (biodegradability and nontoxicity) that make them suitable as medical polymer materials. In addition, it highlights the FDA-approved biodegradable polyester family and focuses on the state-of-the-art recent advancements in drug-delivery devices. Biodegradable Polymeric Nanocomposites: Advances in Biomedical Applications provides current knowledge on biopolymers, examines recent developments and trends, and considers future applications of polymers. Featuring the work of highly-qualified international researchers, this book addresses applications relevant to polymer and material science, as well as material, biomedical, and chemical engineering, and is of specific interest to polymer science engineers.

China Rx Rosemary Gibson,Janardan Prasad Singh.2018 Millions of Americans are taking prescription drugs made in China and don't know it-- and pharmaceutical companies are not eager to tell them. This probing book examines the implications for the quality and availability of vital medicines for consumers. Several decades ago, penicillin, vitamin C, and many other prescription and over-the-counter products were manufactured in the United States. But with the rise of globalization, antibiotics, antidepressants, birth control pills, blood pressure medicines, cancer drugs, among many others are made in China and sold in the United States. China's biggest impact on the US drug supply is making essential ingredients for thousands of medicines found in American homes and used in hospital intensive care units and operating rooms. The authors convincingly argue that there are at least two major problems with this scenario. First, it is inherently risky for the United States to become dependent on any one country as a source for vital medicines, especially given the uncertainties of geopolitics. For example, if an altercation in the South China Sea causes military personnel to be wounded, doctors may rely upon medicines with essential ingredients made by the adversary. Second, lapses in safety standards and quality control in Chinese manufacturing are a risk. Citing the concerns of FDA officials and insiders within the pharmaceutical industry, the authors

document incidents of illness and death caused by contaminated medications that prompted reform. This is a disturbing, well-researched book and a wake-up call for improving the current system of drug supply and manufacturing.

Learning Opportunities Beyond the School Barbara Hatcher, Shirley S. Beck. 1997 The fact that much of learning occurs beyond school walls points to the need for a holistic approach to education. Such an approach involves planned cooperative links between family and the formal and informal learning environments that exist in the community. This monograph advocates such a holistic approach, discussing not only the value of informal learning for children, but also the role that school, home, institutions, and community groups may play in enhancing children's quality of life. The articles in the monograph are: (1) Opportunities for Learning and Development in Multiple Settings (Alice R. Galper); (2) Toddler Story Hours, Poetry Concerts and Internet Access--Now Available at the Library (Ann Carlson Weeks); (3) The World at Their Fingertips: Children in Museums (Mary K. Judd and James B. Kracht); (4) Zoos Aren't What They Used To Be: They Are Better! (Thomas N. Turner); (5) Learning about Work: Extending Learning through an Ecological Approach (Kevin J. Swick); (6) Community Service Groups Enhance Learning (Alicia I. Pagano); (7) Oral History: Engaging Students in Community-based Learning (Ceola Ross Baber and Mary W. The Status of Social Studies Jeff Passe,Paul G. Fitchett.2013-10-01 A team of researchers from 35 states across the country developed a survey designed to create a snapshot of social studies teaching and learning in the United States. With over 12,000 responses, it is the largest survey of social studies teachers in over three decades. We asked teachers about their curricular goals, their methods of instruction, their use of technology, and the way they address the needs of English language learners and students with disabilities. We gathered demographic data too, along with inquiries about the teachers' training, their professional development experiences, and even whether they serve as coaches. The enormous data set from this project was analyzed by multiple research teams, each with its own chapter. This volume would be a valuable resource for any professor, doctoral student, or Master's student examining the field of social studies education. It is hard to imagine a research study, topical article, or professional development session concerning social studies that would not quote findings from this book about the current status of social studies. With chapters on such key issues as the teaching of history, how teachers address religion, social studies teachers' use of technology, and how teachers adapt their instruction for students with disabilities or for English language learners, the book's content will immediately be relevant and useful.

Medicine's Dilemmas William L. Kissick.1994 Can the United States provide a health care program that offers a comprehensive package of the highest-quality health benefits to all Americans while containing health care costs? In this important book, Dr. William L. Kissick says that it cannot: no society in the world has sufficient resources to provide all the health services its population is capable of utilizing. Dr. Kissick was an active participant in the drafting of Medicare legislation in the 1960s and for the past twenty-five years has held joint positions in a medical school and a business school where he has specialized in health care management. Drawing on his long experience in the field, he discusses the dimensions of the current crisis, the financial and medical implications of alternative proposals--including the program put forth by the Clinton administration--and the requirements for long-term strategies. He argues that although there are no ideal solutions to health care reform, there are many significant programs at the regional, state, and local level that can serve as prototypes for the restructuring of the organization, financing, and delivery of health services. Dr. Kissick discusses some of these alternatives and suggests that after the federal government legislates a health care policy, it should be implemented through collaboration with state and local initiatives, for such programs have been built on an understanding of regional needs, expectations, and cultural diversity.
