Advanced Materials in Smart Building Skins for Sustainability Julian Wang,Donglu Shi,Yehao Song.2022-10-29 Conventional building skins are constructed as static structures upon the typical design conditions in terms of external climate and internal occupant activities. This generates dissociation between the envelope structure and its environment. With the emerging advanced materials, such as chromic-based materials, spectrally selective coatings, and transparent photovoltaic, more dynamic and smarter building skins are now achievable and constructible. This book updates readers on the key areas of smart building skins embodied in the novel advanced materials with unique structures and smart properties that enable multiple functions in energy efficiency, solar harvesting, and environmental greenness. It synergistically integrates the topics and knowledge of material design and experimental studies, theoretical analyses of building energy-saving mechanisms and solar energy utilization, and new design methodologies and processes taking advanced materials into account at different scales - from nano to the macroscale.

Open House Alexander von Vegesack,Jochen Eisenbrand.2006 The miniaturization and networking of computer processors as well as the digitalization and wireless transmission of data are opening up new possibilities for domestic environments. But what consequences will this have on residential architecture? Emerging architectural firms were invited to develop visionary answers to this question. Their extraordinary architectural visions are presented in detail for the first time in this publication. The essays are supplemented by a section providing comprehensive, graphically attractive data on demographic and technical developments that will shape our living environments in the near future.

The Periphery Maggie Toy,Jonathan Woodroffe,Dominic Papa,Ian MacBurnie.1994 The peripheral urban condition has long been understood as the demarcation of the city limit where built form confronts unbuilt territory and where the artificial confronts the natural. It has traditionally implied a zone of limited political intent where fragmented infrastructure overlaps dispersed urban form and where the historical, the natural and the expectant co-exist.

Building Skins Christian Schittich.2006-01-01 The external facades of a building are more than a protective mantle, or an intelligent skin regulating temperature and light, they also determine its very appearance. By unusual choices of materials and the use of complex technology, facades have become increasingly significant in recent years. External surfaces are being perceived as an integral part of the building and are therefore being designed as such. This volume focuses on the wide-ranging aspects of facade design, from the selection and use of materials to the advanced technical possibilities now open to the architect. A wide array of carefully selected international examples show the theory in the practice. All plans, details, and large scale sections of the facades have been researched with the high degree of competence typical of the editorial staff from the review Detail. Expert authors provide the essential information needed to plan and design facades and elucidate on the latest developments in technology and materials.

Digital Transformation of the Design, Construction and Management Processes of the Built Environment Bruno Daniotti,Marco Gianinetto,Stefano Della Torre.2019-01-01 This open access book focuses on the development of methods, interoperable and integrated ICT tools, and survey techniques for optimal management of the building process. The construction sector is facing an increasing demand for major innovations in terms of digital dematerialization and technologies such as the Internet of Things, big data, advanced manufacturing, robotics, 3D printing, blockchain technologies and artificial intelligence. The demand for simplification and transparency in information management and for the rationalization and optimization of very fragmented and splintered processes is a key driver for digitization. The book describes the contribution of the ABC Department of the Polytechnic University of Milan (Politecnico di Milano) to R&D activities regarding methods and ICT tools for the interoperable management of the different phases of the building process, including design, construction, and management. Informative case studies complement the theoretical discussion. The book will be of interest to all stakeholders in the building process - owners, designers, constructors, and faculty managers - as well as the research sector.

Responsive Environments Lucy Bullivant.2006-09 The latest title in the V&A Contemporary series looks at groundbreaking interior design, art, and architecture. Responsive environments—spaces that interact with people who use or pass through them—have become ubiquitous lately. Lucy Bullivant provides an intriguing look at these cutting-edge spaces, from an installation in a shopping center that registers passers-by with patterns of colored light and sound, to an interactive artwork in the boardroom of a British TV network. With insights drawn from the author's interviews with many of the designers featured, *Responsive Environments* will appeal to designers, students, and creative professionals, as well as anyone interested in interior design, architecture, and technology.

Encyclopedia of Architectural Technology Jacqueline Glass.2002-04-03 Constant technological advancements are opening up dramatic new possibilities for the built form; at the same time architects are developing innovative designs which require new techniques to make these ideas reality. The Encyclopedia of Architectural Technology is the first book to specifically address these two issues by providing a comprehensive reference to modern architectural technologies, encompassing all key aspects of construction, structures, environmental design and servicing. The Encyclopaedia features over 180 entries ranging from materials and techniques to notable innovators in architecture and engineering. Each entry includes a brief quick-reference summary followed by a more detailed text and suggestions for further reading. Besides technological terms, entries are included on related topics such as sick building syndrome and sustainability. Key engineers Ove Arup and Ted Happold have dedicated entries, as

do a range of ground-breaking architects such as Le Corbusier, Norman Foster, Walter Gropius, Herzog & de Meuron, Oscar Niemeyer, Richard Rogers, Carlo Scarpa, Frank Lloyd Wright, Ken Yeang and many others.

Intelligent Skins Michael Wigginton, Jude Harris. 2013-06-17 Looking to the future, *Intelligent Skins* sets out the principles for the design of the intelligent building envelope. It highlights an exciting new approach to the area, where the fabric of the building responds to external changes and internal demands. The prime objective is to control internal environments through a responsive building fabric rather than by energy consuming building services systems. The authors examine the potential for integral intelligence within the fabric of the building and explore the evolution of information technology and smart materials which have allowed a whole new category of design principles to be created.

Manual on Experimental Methods for Mechanical Testing of Composites C. H. Jenkins. 1998 In the last few decades, there has been tremendous activity surrounding composite materials--a matrix material in which is embedded a reinforcement material. Modern, high-performance composites have revolutionized recent technology, as new composites are designed along with the structures they will become part of. These engineered materials are an ever increasing percentage of materials used in a variety of roles. This book focuses on experimental methods that improve the understanding of the mechanics of composite materials. Experiments are a critical means of material characterization and damage detection, and are always evolving. These papers present a window onto the world of experimental methods for mechanical testing of composites, for individuals who wish to fully encounter that world.
