Corrosion and Electrochemistry of Zinc Xiaoge Gregory Zhang. 1996-09-30 Humankind's use of zinc stretches back to antiquity, and it was a component in some of the earliest known alloy systems. Even though metallic zinc was not discovered in Europe until 1746 (by Marggral), zinc ores were used for making brass in biblical times, and an 87% zinc alloy was found in prehistoric ruins in Transylvania. Also, zinc (the metal) was produced in quantity in India as far back as the thirteenth century, well before it was recognized as being a separate element. The uses of zinc are manifold, ranging from galvanizing to die castings to electronics. It is a preferred anode material in high-energy-density batteries (e.g., Ni/Zn, Ag/Zn, Zn/Jair), so that

its electrochemistry, particularly in alkaline media, has been extensively explored. In the passive state, zinc is photoelectrochemically active, with the passive film displaying n-type characteristics. For the same reason that zinc is considered to be an excellent battery anode, it has found extensive use as a sacrificial anode for the protection of ships and pipelines from corrosion. Indeed, aside from zinc's well-known attributes as an alloying element, its widespread use is principally due to its electrochemical properties, which include a well-placed position in the galvanic series for protecting iron and steel in natural aqueous environments and its reversible dissolution behavior in alkaline solutions.

Proceedings of the 2023 8th International Conference on Engineering Management (ICEM 2023) Bijay Kumar Kandel,Jun Yang,J. JOSE PRABHU,Xueyuan Wang.2024-01-10 This is an open access book.ICEM started in 2016, ICEM 2016-2022 is to bring together innovative academics and industrial experts in the field of Engineering Management to a common forum. And we achieved the primary goal which is to promote research and developmental activities in Engineering Management, and another goal is to promote scientific information interchange between researchers, developers, engineers, students, and practitioners working all around the world. 2023 8th International Conference on Engineering Management (ICEM 2023) will be held on September 8-10, 2023 in Wuhan, China. Except that, ICEM 2023 is to bring together innovative academics and industrial experts in the field of Engineering Management to a common forum. We will discuss and study about Project & Engineering Management , Visual analysis of big data, Supply Chain Management and Modeling, Disaster Modeling and Simulation and other fields. ICEM 2023 also aims to provide a platform for experts, scholars, engineers, technicians and technical R & D personnel to share scientific research achievements and cutting-edge technologies, understand academic development trends, expand research ideas, strengthen academic research and discussion, and promote the industrialization cooperation of academic achievements. The

conference sincerely invites experts, scholars, business people and other relevant personnel from universities, scientific research institutions at home and abroad to attend and exchange! The conference will be held every year to make it an ideal platform for people to share views and experiences in Engineering Management and related areas. Engineering management refers to the decision-making, planning, organization, command, coordination, and control of engineering to achieve expected goals and effectively utilize resources. The Engineering Management major cultivates students with theoretical foundations in construction engineering technology, economics, management, law, ecology, humanities, and other fields required by the new engineering discipline. They receive basic training as engineers and consultants, and possess independent thinking ability, engineering practice ability, organizational management ability, and international perspective as composite senior engineering management talents. We sincerely welcome our colleagues worldwide to join us for this conference. We look forward to seeing you in Wuhan, China for this exciting event!

Severe Weather Warnings: An Interdisciplinary Approach William Donner, Havidan Rodriguez, Jerald Brotzge, Walter R.

Diaz. 2022-08-24 This book offers a comprehensive description and analysis of natural hazard warnings, drawing on perspectives from the social sciences, physical sciences, and interdisciplinary fields such as disaster studies to articulate a distinction between traditional warnings and what might be called interdisciplinary warnings. Traditional warnings approach warning technology, design, and application from a principally scientific and technical perspective. Human factors, while considered, often are of secondary concern. Interdisciplinary warnings, on the other hand, maintain a critical emphasis on the technical merits of warning systems, but also ask, "Will psychological and community factors such as culture and structure shape how the system is used, and, if so, can this information be incorporated into system design

preemptively to make it more effective?” Given the absence of systematic work on interdisciplinary warnings, a book-length monograph discussing and synthesizing knowledge from the various fields focused on warnings and warning response is of critical importance to both academics and practitioners. Broadly conceived, the book presents readers with an in-depth overview of warnings, interdisciplinary research, and interdisciplinary collaboration. The book holds appeal for a very broad audience: scholars; practitioners; and academic, vocational, and technical instructors both in University and non-University settings. It is of interest to academic scholars due to the interdisciplinary treatment of warnings as well as the general presentation of up-to-date scholarship on warning theory. Additionally, scholars interested in interdisciplinary work in general and those focusing on disaster warnings find within the volume a framework for developing collaborative research partnerships with those from other disciplines. As well, the book offers practitioners -- emergency managers, mitigation specialists, planners, etc. -- a more comprehensive perspective on emergency response in practice, allowing for better development and application of warning policy. Finally, the book appeals to instructors both inside and outside the academy. The authors envision the book useful to professors teaching both graduate and undergraduate-level courses in Sociology of Disaster, Emergency Management Planning, Homeland Security, Disaster Response, Disaster Mitigation, and Business Continuity and Crisis Management. A robust market also exists among professional organizations, perhaps most notably FEMA, which offers countless online and in-person training courses via the National Training Program, Emergency Management Institute (EMI), and other venues.

Circulation Weather types as a tool in atmospheric, climate and environmental research Alexandre M. Ramos, David Barriopedro, Emanuel Dutra. 2015-09-11 Classifications of circulation weather systems have a long history in meteorology

and climatology. Starting with manual classifications over specific regions of the globe, these tools (generally called “catalogs of synoptic types”) were restricted mainly to weather forecasting and historical climate variability studies. In the last decades, the advance of computing resources and the availability of datasets have fostered the development of fast and objective methods that process large amount of data. In recent years numerous methods of circulation type classification have been designed, showing their usefulness on a wide range of applications in scientific domains related to weather, climate, and environment. This Research Topic highlights methodological advances in circulation weather types and also their applications to different research areas. The articles included in this research topic show that circulation weather types can be used not only in Europe, where they have been always more frequent, but also applied to other regions of the world.

Pearson's Peacekeepers Michael K. Carroll.2010-01-01 In 1957, Lester Pearson won the Nobel Peace Prize for creating the United Nations Emergency Force during the Suez crisis. The award launched Canada's enthusiasm and reputation for peacekeeping. *Pearson's Peacekeepers* explores the reality behind the rhetoric by offering a detailed account of the UNEF's decade-long effort to keep peace along the Egyptian-Israeli border. While the operation was a tremendous achievement, the UNEF also encountered formidable challenges and problems. This nuanced account of Canada's participation in the UNEF challenges perceived notions of Canadian identity and history and will help Canadians to accurately evaluate international peacekeeping efforts today.
