Taming the Megalopolis Lauchlin Currie.2016-08-01 Taming the Megalopolis: A Design for Urban Growth is a stimulating and provocative text that identifies the imminent problems of human settlement in large emerging cities in developing countries with mixed economies and their possible solution. The book is a written expression of an expert's view on the problem of human settlement that aims to raise discussions, from concerned policymakers, on the identification of the problems and inciting proposals for solutions to the growing problem of human settlement in large emerging cities. The text is divided in two parts: Urban Problems and Solutions. The first part provides the basic definition and aspects of urbanization and the identification of problems of human settlement in urbanized areas. Part II introduces possible measures to solve the problems of urbanization, such as changing the design of metropolitan areas; maintaining ownership in public corporations; capturing rise in land values; and securing relatively full employment for urban workers. Economists, sociologists, urban planners and policymakers, engineers and designers, and people affected by the problems of urbanization will find this book invaluable.

Governance and Planning of Mega-City Regions Jiang Xu,Anthony G.O. Yeh.2010-09-13 Provides a comparative treatment and examination of how new approaches in governance and planning are reshaping mega-city regions around the world. The contributors highlight how European mega-city regions are evolving and strategic intervention redefined to enable the integration of urban qualities in a multi-level governance environment, how traditional federal countries in North America and Australia see the promise of major policies and development initiatives finally moving ahead to herald a more strategic intervention at national and regional scales, and how transitional economies in China witness the rise of state strategies to control the articulation of scales and to reassert the functional importance of state in a growing diffused power context.

The Living City David Cadman,Geoffrey Payne.2019-06-21 First published in 1990. The options and probabilities for the future of cities are issues of outstanding contemporary importance, both in the developed and developing worlds. The Living City draws together both current mainstream ideas on their futures and various alternative views to enliven the debate and put forward an agenda for sustainable urban development, emphasizing ideas that question the economic imperatives of that development. Certain aspects of city life - the economy of the city, city-countryside relationships, the city as a cultural centre - are selected for study, as the book looks at the historical past and current experiences to speculate on the likely condition of cities in the future. In addition, the book investigates whether the Third World experience of city life is a separate experience or whether there are lessons to be learnt relating to all cities. The book will appeal to professionals in the surveying, planning and architectural fields, as well as students and academics in Planning, Geography, Economics, Architecture, Development Studies and Sociology and anyone interested in issues concerning the city and the environment.

Environmental Problems in an Urbanizing World Jorge E. Hardoy,Diana Mitlin,David Satterthwaite.2013-11-05 New edition of Environmental Problems in Third World Cities Cities in Africa, Asia and Latin America contain some of the world's most life- and health-threatening human environments. Environment-related diseases and injuries cause millions of preventable deaths each year. In many squatter settlements, children are 40 to 50 times more likely to die before the age of five than they would be in Europe or North America and most such deaths are environment-related. Many cities also cause serious environmental degradation to their surroundings and increasingly contribute to global warming. This updated and much expanded edition of the classic Environmental Problems in Third World Cities describes environmental problems and their effect on human health, local ecosystems and global cycles. It points to the political causes that underpin many of these problems - including ineffective, unaccountable governments, and aid agencies' reluctance to work with the urban poor. It also highlights innovative solutions such as: * High-quality, low-cost homes and neighbourhoods developed by urban poor groups working with local non-governmental organizations * Local Agenda 21s developed by municipal governments in partnership with community organizations.* In their analysis, the authors show that cities can meet sustainable development goals. There are practical, affordable solutions to their environmental problems, but most of these depend on more competent and accountable city governments and on more support for low-income households and their organizations. The book also outlines the changes needed international aid agencies to support this. PRAISE FOR THE FIRST EDITION 'It's rare to encounter a work as authoritative and accessible as this. It is a mine of useful information from cities in every corner of the Third World, which does not shy away from the immensity of the problems, but says as much about the solutions to them as about the problems themselves' Jonathon Porritt 'Well written and very accessible' The Geographical Journal 'Of value to students, teachers, practitioners, policy makers and aid agencies' Third World Planning Review 'A valuable resource for understanding the underlying problems[this book offers] practical alternatives' Cities International.

Devising a Clean Energy Strategy for Asian Cities Hooman Farzaneh.2018-07-13 This book capitalizes on two hot topics: the Low Carbon Emission Development Strategies and climate change in Asian cities. There is resurgence in making policies to investigate more aspects of the energy-environment spectrum for the global energy market in the future. This book helps the policy makers and researchers to understand which actions should be taken to reduce the environmental impacts of economic activities in different regions in Asia. The clean energy strategy proposed in this book refers to the development and implementation of policies and strategies that simultaneously contribute to addressing climate change and solving local environmental problems, which also have other development impacts. It provides insights to a wide audience on successful ways to promote, design and implement the clean energy policies in Asian cities. To determine the global actions, it is necessary to make breakthroughs by promoting further research and to present scenarios that achieve Low Emission Development Strategies (LEDS) goals without dependence upon fossil fuels. The scenarios and case studies discussed in this book are helpful to plan for the SDGs, where various objectives have to be achieved at the same time. The UN 2030 development agenda needs innovative planning to achieve multiple goals with limited resources and generate synergy among sectors. This book will be one of the first books available on this subject.

Making Cities Work: The Dynamics Of Urban Innovation David Morley.2019-03-13 This book is an outcome of the conference 'Urban Innovation: Working Solutions to the Problems of Human Settlement' held in 1977. It focuses on urban innovations as working alternatives that reflect an institutional capacity to adapt complex human systems in response to basic environmental change.

Public Problems - Private Solutions? Simon Raiser.2017-11-30 Cities and city regions are undergoing rapid transformation. They are prime locations of innovation, while at the same time facing growing problems of spatial fragmentation and social exclusion. By addressing these problems, cities become forerunners for new patterns of governance, which include increasingly private actors. While research on 'global' cities has focused primarily on the world's leading financial and economic centres, comparative research on the changing role of large, complex cities in the developing world is less advanced. But it is here, where public problems are most seriously threatening the cohesion of urban society and where the need for new answers is most urgent. Illustrated by in-depth examinations of four city regions: Shanghai, Mumbai, Johannesburg and São Paulo, this book readdresses this balance. The book revisits the same set of cities from different angles, thereby reflecting urban contradictions, juxtapositions, and disjunctures.

Mega-city Growth and the Future Roland J. Fuchs.1994 This book examines a range of issues related to the mega-city phenomenon. Part one deals with the growth of mega-cities and explores demographic issues, labour force change in the big cities of Asia, the effect of macroeconomic forces on the world city system, and the relations between technology and the city. In part two, the discussion focuses on the economic and social consequences of mega-city growth. Part three looks at the crucial issue of the management of mega-cities, taking up such issues as infrastructure financing, land and shelter needs, transportation, and environmental management. The final chapter examines priority urban management issues in developing countries and derives a research agenda for the 1990s. (Adapté du résumé de l'éditeur).

Identity, Justice and Resistance in the Neoliberal City Gülçin Erdi,Yıldırım Şentürk.2017-08-31 This book details the current neoliberal restructuring of cities and its impact on the rise and spread of resistance and uprisings in different cities throughout the world. Through close ethnographic study the authors illuminate the strategies adopted for everyday life that have evolved in response to the neoliberal managing of cities, by which the city is shaped by market forces rather than by the needs of its inhabitants. In the light of many urban movements, uprisings and forms of resistance observed in such diverse countries as Brazil, Turkey, the USA, Greece and Spain since the Arab uprising of 2011, this collection makes an original contribution to urban sociology and social geography by developing a spatial approach to understanding how the city shapes identities and perceptions of (in)justice. This innovative volume will be of interest to readers across the social sciences.

How Cities Will Save the World Ray Brescia,John Travis Marshall.2016-06-03 Cities are frequently viewed as passive participants to state and national efforts to solve the toughest urban problems. But the evidence suggests otherwise. Cities are actively devising innovative policy solutions and they have the potential to do even more. In this volume, the authors examine current threats to communities across the U.S. and the globe. They draw on first-hand experience with, and accounts of, the crises already precipitated by climate change, population shifts, and economic inequality. This volume is distinguished, however, by its central objective of traveling beyond a description of problems and a discussion of their serious implications. Each of the thirteen chapters frame specific recommendations and guidance on the range of core capacities and interventions that 21st Century cities would be prudent to consider in mapping their immediate and future responses to these critical problems. How Cities Will Save the World brings together authors with frontline experience in the fields of city redevelopment, urban infrastructure, healthcare, planning, immigration, historic preservation, and local government administration. They not only offer their ground level view of threats caused by climate change, population shifts, and economic inequality, but they provide solution-driven narratives identifying promising innovations to help cities tackle this century's greatest adversities.

Megacities Steef Buijs,Wendy Wanyin Tan,Wendy Tan,Devisari Tunas.2010 World cities are reaching previously inconceivable sizes and populations. For the last fifteen years, The Megacities Foundation has encouraged public debate on this development, uniting practitioners from the fields of architecture, economics, geography, sociology and urban planning. This book offers a compilation of the Foundation's best lectures, defining megacities and their processes and systems.

Megacities Andre Sorensen,Junichiro Okata.2010-11-18 For the first time in human history, more than half the world's population is urban. A fundamental aspect of this transformation has been the emergence of giant cities, or megacities, that present major new challenges. This book examines how issues of megacity development, urban form, sustainability, and unsustainability are conceived, how governance processes are influenced by these ideas, and how these processes have in turn influenced outcomes on the ground, in some cases in transformative ways. Through 15 in-depth case studies by prominent researchers from around the world, this book examines the major challenges facing megacities today. The studies are organized around a shared set of concerns and questions about issues of sustainability, land development, urban governance, and urban form. Some of the main questions addressed are: What are the most pressing issues of sustainability and urban form in each megacity? How are major issues of sustainability understood and framed by policymakers? Is urban form considered a significant component of sustainability issues in public debates and public policy? Who are the key actors framing urban sustainability challenges and shaping urban change? How is unsustainability, risk, or disaster imagined, and how are those concerns reflected in policy approaches? What has been achieved so far, and what challenges remain? The publication of this book is a step toward answering these and other crucial questions.

Welcome to the Urban Revolution Jeb Brugmann.2009-07-01 The revolutions that have taken place around the world during the last fifty years-the ousting of Marcos and the Shah of Iran; the fall of communist regimes in Eastern Europe; the end of Apartheid in South Africa and, indeed, the civil rights revolution in America-were fundamentally urban revolutions. They were the revolutions of Manila, Teheran, Gdansk, Leipzig, Berlin, Johannesburg and Detroit, muscular assertions of new classes of city-dwellers intent on ending their marginalization as they struggled to build their new livelihoods, freedoms and communities in cities. In Welcome to the Urban Revolution, Jeb Brugmann argues that the city itself had become our era's medium for revolutionary change: not only political, but technological as well. Though we think of them as a hotbed for poverty and crime, cities are not just a source of problems and conflict. They can also be a source of solutions to the major problems of our day: poverty, social inequality and environmental sustainability. In Welcome to the Urban Revolution Brugmann will show what is unique and important about cities and how they grow, the ways global issues are being solved in individual cities, and how real people are living with urban migration day in and day out.

Strategy and Partnership in Cities and Regions NA NA.2016-04-30 Policy-makers in Pittsburgh, Birmingham and Rotterdam are confronted with rapidly changing social and economic environments. Public- and

private-sector organizations in the three cities are increasingly addressing regional issues strategically, and are joining together in partnerships to promote competitiveness and economic growth. This book covers the complexities of modern governance under such circumstances, the diversity and patterning of public-private partnerships and networks, and the changing economic development strategies of city governments and organizations.

Future Cities: All That Matters Camilla Ween.2014-06-27 In *Future Cities: All that Matters* Camilla Ween will outline the challenges of meeting the anticipated growth of world cities over the next few decades. By 2030 it is predicted that between 80-90 % of the world's population will be living in cities, in several countries this will be 100%; Singapore is already classified as having a 100% urban population. There will be many cities with populations of over 20 million. The infrastructure required to support these cities will be a massive challenge for city planners and governments. Never in the history of civilisation has the need to deliver so much been so urgent - and with dwindling world resources. Tackling the challenges will be further complicated by pressure to develop solutions that are sustainable and include climate change mitigation measures. Some advocate geo-engineering - the large-scale engineering and manipulation of the world's environment e.g. ocean fertilisation to remove CO2 from the atmosphere, as the answer to tackling climate change. Others see this as a doomsday scenario and believe the solution lies in behaviour adaptation, changing the way we live and making do with less. Despite the difficulties, the book will chart how some cities are already tackling the problems, policies that are emerging to meet these challenges and will highlight innovations that are currently being explored.

Innovative Solutions for Creating Sustainable Cities Sylvie Albert.2019-08-30 How do we prepare for and manage the challenges and the transformations that are increasingly confronting cities? Solutions are necessary for the impacts expected from the global population movement toward urban centres; the evolution of technologies and its influence on the economy; the evolving socio-cultural fabric of our cities and what it means for citizen engagement and happiness; and for the increasing need to protect and better manage the environment. The series of essays presented here will help governments, organizations, and concerned citizens think differently about ways we can improve the places we call home. It will stimulate local stakeholders to move away from silo-thinking and work collaboratively toward innovative solutions to make cities more liveable and sustainable. The volume brings together international experts on development, innovation, education, health, digitalization, and planning to provide stimulating new ideas and successful examples of tools and systems being used worldwide to improve the future of cities.

Urban Future 21 Peter Hall,Ulrich Pfeiffer.2013-09-13 Prepared for the World Commission on Twenty-First Century Urbanization Conference in Berlin in July 2000. This book is an entirely new and comprehensive review of the state of world urban development at the millennium and a forecast of the main issues that will dominate urban debates in the next 25 years. It is the most significant book on cities and city planning problems to appear for many years.

Cities and Mega-Cities Frederic R. Siegel.2018-06-27 This book discusses existing and future global problems of physical, chemical, biological and societal origins faced by increasingly populated cities and mega-cities, and options to mitigate or eliminate them. In nine chapters, the book focuses on rehabilitation and redevelopment projects aimed at converting shantytowns/slums into well serviced neighborhoods via secure housing, clean piped water, adequate access to sanitation, and other amenities for good living conditions. Examples of rehabilitation (restore capacity, structures, efficiency) and redevelopment (redesign, rebuild, attract investment) are addressed in detail, as are the sources of major financing to support such projects and proposals. The final chapters also discuss problems faced by countries with contracting populations, and their viable solutions. The book will be of interest to academics, city planners, land-use planners, NGOs, and designers /architects specializing in urban development and redevelopment.

The Crisis of America's Cities Randall Bartlett.2015-05-20 An original work on American cities and the ongoing urban crisis. Using the metaphor of the socially constructed organization of space, Bartlett takes a broad view of the evolution of urban America, from its historical roots to the present; he then examines the way in which current policies have responded to, and affected the organization of space (covering housing, transportation, government and other urban problems). He concludes with a look to the future of American cities, how they will impact and be impacted on by changing commercial and labor markets, by the problems of poverty and cultural change. In an epilogue, he explores possible ways to overcome the social dilemmas, while recognizing the difficulty of this undertaking. A thoroughly unique perspective to the study of cities, this book is about how space is used in America and how it changes as the logic of location evolves historically. Starting with the assumption that cities are fundamentally unnatural phenomena, it unravels the interactions of technological advances that have made them possible and policies that have given them shape.

The Key to Sustainable Cities Gwendolyn Hallsmith.2009-03-01 A powerful tool for leveraging change toward sustainability.

Megacities Frauke Kraas,Surinder Aggarwal,Martin Coy,Günter Mertins.2013-07-12 As urbanization continues, and even accelerates, scientists estimate that by 2015 the world will have up to 60 'megacities' - urban areas with more than five million inhabitants. With the irresistible economic attractions of urban centers, particularly in developing countries, making the influx of citizens unstoppable, many of humankind's coming social, economic and political dramas will be played out in megacities. This book shows how geographers and Earth scientists are contributing to a better understanding of megacities. The contributors analyze the impact of socio-economic and political activities on environmental change and vice versa, and identify solutions to the worst problems. They propose ways of improving the management of megacities and achieving a greater degree of sustainability in their development. The goals, of wise use of human and natural resources, risk reduction (both social and environmental) and quality of life enhancement, are agreed upon. But, as this text proves, the means of achieving these ends are varied. Hence, chapters cover an array of topics, from health management in Indian megacities, to planning in New York, to transport solutions for the chronically traffic-choked Bangkok. Authors cover the impact of climate change on megacities, as well as less tangible issues such as socio-political fragmentation in the urban areas of Rio de Janeiro. This exploration of some of the most crucial issues that we face as a species sets out research that is of the utmost importance, with the potential to contribute substantially to global justice and peace - and thereby prosperity.

Strategy and Partnership in Cities and Regions B. Jacobs.2000-03-31 Policy makers in Pittsburgh, Birmingham and Rotterdam are confronted with rapidly changing social and economic environments. Public and private sector organizations in the three cities are increasingly addressing regional issues strategically and joining together in partnerships to promote competitiveness and economic growth. Local communities are linking to regional economies as companies restructure and strategy-makers recognise the benefits of urban regeneration as an important condition for economic prosperity. The book covers the complexities of modern governance under such circumstances, the diversity and patterning of public-private partnerships and networks and the changing economic development strategies of city governments and regional and local organizations.

Shmelev.2019-11-14 To assess urban sustainability performance, this book explores several clusters of cities, including megacities, cities of the Global South, European and North American cities, cities of the Middle East and North Africa, cities of Central and South East Asia, a city state of Singapore and a large group of global cities. It applies a multi-criteria approach using a panel of environmental, economic, social and smart indicators to assess progress and policies in global cities including London, New York, Hong Kong, San Francisco, Los Angeles, São Paulo, Rio de Janeiro, Buenos Aires, Paris, Berlin, Stockholm, Moscow, Beijing, Seoul, Singapore, Shanghai, Sydney, Tokyo and many others. Additional attention is given to the issues of climate change, poverty and smart dimensions, with renewable energy and the drivers of urban CO2 emissions playing the central role. This book is abundant with case studies considering strategies, policies and performance of the leading cities, including San Francisco, Stockholm and Seoul in greater depth, exploring how their successes can be used by other cities. The book identifies key linkages between different smart and sustainability dimensions as well as investment opportunities in cities with sustainability potential. Cities around the World [2 volumes] Jing Luo.2019-07-10 This two-volume set offers a comprehensive overview of major challenges faced by cities worldwide in the 21st century, and how cities in different geographic, economic, and political conditions are finding solutions to them. This two-volume encyclopedia examines ten critical issues that face cities across the globe today—environmental and societal struggles that affect the daily lives of city dwellers. Readers will gain a better understanding of our global neighbors and will be able to use this book in order to compare and contrast different approaches to critical issues in our world. Volume One examines employment and jobs; energy and sustainability; green spaces; housing and infrastructure; and migration and demographic changes. Volume Two discusses pollution; schools; traffic and transportation; violence, corruption, and organized crime; and waste management. Each issue begins with an introduction providing an overview of the issue from a global perspective. Following the introduction are ten alphabetically arranged world city profiles of cities that are struggling with the issue and cities that have found innovative solutions to deal with the crisis. The profiles explain how the problem came to be; consequences inhabitants face, such as compromised health, limited access to education, and high taxes with low wages; and failed and successful initiatives taken by city management.

Performance Metrics for Sustainable Cities Sylvie Albert,Manish Pandey.2021-09-01 Performance Metrics for Sustainable Cities provides an overview of measurement systems and tools to enable communities to self-assess and benchmark their progress along a continuum of smart, intelligent, and sustainable development. It begins by explaining the importance of measurement and evaluation for cities and smaller communities, as well as future factors that will need to be considered and embedded into planning processes. Across 14 chapters, the book describes existing evaluation mechanisms that are being used for government funding decisions, awards of recognition, and new measurement systems to assess what makes a city smarter and more sustainable, such as broader sustainable goal targets (UN SDGs), green cities, fabrication cities, and compassionate cities. It presents examples of metrics used for important sustainability and liveability concepts for cities such as how to measure trust, engagement, compassion, circular economy, and so forth. The book ends with reflections on the feasibility of a holistic system of measurement and the implications of its implementation. This volume will be of great interest to students, researchers, and professionals of urban sustainability, planning, smart cities, and sustainable communities.

Third World Cities John D. Kasarda,Allan M. Parnell.1993 It took New York City (the world's largest metropolis in 1950) nearly a century and a half to expand by eight million residents. Mexico City and Sao Paulo will match this growth in less than fifteen years. Asia's mega-cities, too, are exploding in number and size. This kind of unprecedented growth is being echoed in the urban centers of developing nations around the globe. The essays in this volume address the wide array of problematic issues--as well as the opportunities and advantages--that are the natural outgrowth of such rapid urbanization. Third World Cities examines three sets of

vital issues. Drawing on the experience and evidence of the past two decades, the book's initial chapters assess theoretical frameworks upon which urban and migration policies are based. The authors of the middle section press for fresh approaches to the increasing demands placed on institutions and individuals in the largest cities of the developing world. The final chapters examine the complex demographic, social, and economic processes of urban growth. Students, professionals, and policymakers in development and urban studies, public administration, sociology, political science and comparative politics, geography, and ethnic studies will find *Third World Cities* to be a refreshing and innovative look at this growing concern. *Third World Cities* offers a range of new ideas on the demographic, social spatial, and environmental changes that are 'occurring so quickly that up-to-date evidence is elusive' . . . *Third World Cities* is both thought-provoking and highly readable. -The Economic Times

Mega-City Region Development in China Anthony G.O. Yeh,George C. S. Lin,Fiona F. Yang.2020-11-22 This book sheds light on the mega-city region development in China as a new form of urbanization which plays a crucial role in the economic development of the country. It examines the challenges faced by the mega-city regions and opens up avenues for debates and further research. Economic reform of 1978 has led to an unprecedented growth in the population and economic development of China. A large portion of this increased urban population and the corresponding economic growth has been concentrated in the mega-city regions, such as Beijing-Tianjin-Hebei (BTH), Yangtze River Delta (YRD) and Pearl River Delta (PRD). These three mega-city regions have less land but more people and thus higher economy, resulting in various issues and challenges faced by these regions. These challenges pertain to the socio-economic development, transport, environment, governance and development strategy, which this book explores through case studies of Guangdong-Hong Kong-Macao Greater Bay Area, Beijing-Tianjin-Hebei and Wuhan. This book also explains and analyses the economy, migration processes, transport development, environmental conditions and governance of the mega-city regions of China. With an overview of China's rapid urbanisation and the consequent economic growth, this book provides an essential understanding of related issues in order to establish appropriate strategies and policies to sustain the process of mega-city region development.

Future Sustainable Urban Freight Network Design in the Large Cities and Megacities Zhangyuan He.2021-07-12 This book aims to investigate a long-term strategy for sustainable urban logistics. The literature evidence exhibits that considerable research on urban logistics lacks long-term planning and rarely considers the urban spatial development and integration of urban distribution innovations. Currently, 11 distribution innovations can be used for future sustainable urban freight transport. According to a systematic discussion, this book formulates the conceptual model of Sustainable Inner-urban Intermodal Transportation (SIUIT) for future urban logistics. Moreover, a comprehensive analysis illustrates that future integrations of distribution innovations comprise operational and technological integration. To this end, the morphological analysis method is employed to discuss their feasible solutions based on the SIUIT model. After that, combined with the trend exploration of urban spatial development on large- and megacities, this book constructs the 2.x Modula & Sustainable Urban Freight Network to improve the flexibility of the future sustainable logistics transformation. About the AuthorDr. rer. pol. Zhangyuan He graduated from the University of Bremen. He currently undertakes postdoctoral research at the School of Urban Planning and Design, Peking University.

Incomplete Urbanism William Siew Wai Lim.2012 Foreword by Leon van SchaikIncomplete Urbanism is a dynamic, hybrid interactive concept, which destabilizes the current architectural and urban theories and practices. Its main characteristics are indeterminacy, inconsistency and changeability, which are particularly challenging in the context of the New World Order and the fast emerging global digital network. It is a concept that can be effectively applied to any sizeable section of existing cities without the need for major readjustments and can be implemented at different rates in response to specific local conditions. As for the word 'critical', I use it deliberately in order to convey the essential need to think creatively and positively in a controversial contesting and social-orientated manner about what we do, as it will constructively influence the way we do things that impact our values and social environment.
