The Military Commander's Necessity Sigrid Redse Johansen.2019-10-03 The idea of military necessity lies at the centre of the law of armed conflict and yet it is less than fully understood. This book analyses which legal limits govern the commander's assessment of military necessity, and argues that military necessity itself is not a limitation. Military necessity calls for a highly discretionary exercise: the assessment. Yet, there is little guidance as to how this discretionary process should be exercised, apart from the notions of 'a reasonable military commander'. A reasonable assessment of 'excessive' civilian losses are presumed to be almost intuitive. Objective standards for determining excessive civilian losses are difficult to identify, particularly when that

'excessiveness' will be understood in relative terms. The perpetual question arises: are civilian losses acceptable if the war can be won? The result is a heavy burden of assessment placed on the shoulders of the military commander.

The Columbia Manual of Dermatologic Cosmetic Surgery Emil Bisaccia, Dwight A. Scarborough. 2002 This book is a practical discussion on successfully integrating cosmetic surgery into a practice. Dr. Basaccia and Dr. Scarborough direct the book to dermatologists in practice who are considering or are in the process of expanding their practice to include cosmetic surgery. Unique to this reference is section one, The Surgical Setting. All of the cosmetic procedures available to the dermatologists require the proper credentials and the information is provided in this section. The surgical technique section is unique because it emphasizes indications for a procedure as well as an explanation on how to do the procedures. The facial and body form analysis is the basis for presenting the procedures.

Lasers in the Conservation of Artworks Klaus Dickmann, Costas Fotakis, John F.

Asmus.2006-04-05 Since 1995, when Costas Fotakis first brought together restorers and scientists to discuss the potential of lasers in art conservation, the field has grown enormously in importance, and today restorers and laser scientists work together to develop new applications. This book presents the more than six dozen research papers prepared for LACONA V (Lasers in Art Conservation), held in Osnabrueck/Germany in September 2003. The fifth congress once again gathered restorers, art historians, museum staff, laser scientists and laser manufacturers. The topics include, among others: laser cleaning of artworks (case studies and side effects), removal of former conservation layers, fundamentals of laser-artwork interaction, online monitoring and process control, laser diagnostics, spectroscopy for monitoring and identification, networks and cooperation projects.

Precision agriculture '07 J.V. Stafford.2023-08-28 With ever-increasing pressures on world agriculture in both economic and environmental terms, application of the concept of precision agriculture is one way of enabling farmers and producers to cope. 'Doing arable agriculture and horticulture more precisely' means that the use of inputs is optimised, crop yield and quality are maximised and leakage of agro-chemicals and fertilisers to the environment is minimised. This publication contains papers presented at the 6th European Conference on Precision Agriculture. The papers reflect the wide range of disciplines encompassed by precision agriculture, including: soil physics, crop physiology, agronomy, IT, agricultural technology, sensor technology, remote sensing, geostatistics and environmental science. The wide range of research topics reported will be a valuable resource for researchers, advisors, teachers and professionals in agriculture long after the conference has finished. Peer-reviewed papers from the 3rd European Conference on Precision Livestock Farming are presented in a companion proceedings, Precision livestock farming '07.

Operating Manual for Ultrashort Pulse Laser System-II (1060 Nm Operation). .1997 This report describes the ultrashort pulse laser system, USP-II, installed in the research laboratory and which is comprised of components manufactured by both Spectra-Physics and Coherent Laser Group. This laser system uses state of the art laser technology to provide very high energy single pulses in the visible and near IR spectra for pulsewidths near 100 femtoseconds This report describes in detail the turn-on and operating procedures so that the system operator can bring it up to specification and fine-tune the subsystems to give optimum pulsewidth and energy pulse outputs. The basic system has been configured to operate on a single 4 by 12 ft optical bench with some diagnostic instruments permanently mounted to the table. The major subsystems which comprise the USP-II are described briefly as to their operating characteristics and how the output characteristics of each unit affects the output of the following unit. This report is not designed to replace the operating procedures of each subsystem but rather to describe how the complete system works in unison. Each subsystem is described in the same order as required to turn on the system and reach specified outputs. The theory of operation is incorporated into this turn-On procedure along with optimizing procedures. If any subsystem output does not meet its specifications, the operator is referred to the manufacturer's operating and maintenance procedures for that particular laser. Correct output signals for each laser are described and optimizing procedures for obtaining these optimum levels are also described. This report should be adequate for the daily operation of the system if no problems occur within any subsystem.

Femtolasers for Cataract Surgery Federica Gualdi, Luca Gualdi.2014-01-30 Cataract surgery is one of the most commonly performed procedures worldwide. In traditional cataract surgery, the surgeon

uses handheld instruments and a scalpel blade. This manual approach limits predictability and precision, potentially affecting visual outcomes and complication rates. Femtolasers allow surgeons to access and remove a cataract with far greater accuracy, much faster and causing little or no discomfort to the patient (Omni Eye Services). This book is a comprehensive guide to femtolasers in cataract surgery. Beginning with an introduction to the procedure, the following chapters examine various laser systems currently used in practice, comparing their technologies, techniques, benefits and potential complications. Written by an internationally recognised author and editor team, this invaluable manual includes more than 400 clinical photographs, illustrations and tables. Metrology at the Frontiers of Physics and Technology L. Crovini, T.J. Quinn. 1992-10-22 The spectroscopy of trapped ions or laser-cooled atoms offers the prospect of visible frequency standards to match or even exceed the accuracy of the caesium standard. The development of satellite methods for time comparisons has improved by more than an order of magnitude the accuracy with which national laboratories can routinely compare their clocks. Mechanical metrology has not been left behind. Driven by the need to improve manufacturing technology, major advances have taken place in computer control machining and mechanical measuring systems. These, and many other

fascinating developments in the field of metrology are presented in this book.
