Pioneering Ideas for the Physical and Chemical Sciences W. Fleischhacker,T. Schönfeld.2013-11-11 This volume presents the contributions delivered at the Josef-Loschmidt-Symposium, which took place in Vienna, June 25-27, 1995. The symposium was arranged to honor Josef Loschmidt one hundred years after his death (8 July 1895), to evaluate the significance of his contributions to chemistry and physics from a modern point of view and to trace the development of scientific fields in which he had done pioneering work. Loschmidt is widely known for the first calculation of the size of molecules (1865/66), which also led to values for the number of molecules in unit gas volume and for the mass of molecules. With critical analyses of problems in statistical physics he made important contributions to the development of that field, Loschmidt's paradoxon continuing to be a point of departure for present day studies and discussions. For decades there was little awareness that Loschmidt was a pioneer in organic structural chemistry. Only in recent years has Loschmidt's first scientific publication *Chemische Studien I*, published in 1861, become more widely known and it is now recognized that with his ideas on the structure of organic molecules he was greatly ahead of the chemists of that time. The papers in these proceedings are arranged in three sections: 1. Organic structural chemistry (Chapters 1-12). 2. Physics and physical chemistry (Chapters 13-26). 3. Loschmidt's biography, Loschmidt's world (Chapters 27-33).

Beyond the Blue Border Dorit Linke.2021-09-07 Hanna and Andreas will do anything to leave oppressive East Germany behind. There's one escape route open to them, but can they survive it? Hanna and Andreas have always been friends. When they're expelled from school for activism directly challenging the socialist state in East Germany, they end up doing factory work. But what kind of life do they have to look forward to without education or opportunity? Especially when they aren't allowed a voice? The choice to risk imprisonment or death by escaping to the democratic West seems like a risk worth taking. They set out to swim twenty-five hours across the choppy waters of the Baltic Sea. Linke's storytelling achieves a delicate balance between heightened moments of danger--searchlights, jellyfish, a Russian helicopter, a violent summer storm--and the monotony, ineffable fatigue, physical pain, cramping, fear, and hope that fill the rest of the journey. A memorable tale of two people risking all for a chance at freedom.

Love in the Big City Sang Young Park.2021-11-16 A funny, transporting, surprising, and poignant novel that was one of the highest-selling debuts of recent years in Korea, *Love in the Big City* tells the story of a young gay man searching for happiness in the lonely city of Seoul *Love in the Big City* is the English-language debut of Sang Young Park, one of Korea's most exciting young writers. A runaway bestseller, the novel hit the top five lists of all the major bookstores, went into twenty-six printings, and was praised for its unique literary voice and perspective. It is now poised to capture a worldwide readership. Young is a cynical yet fun-loving Korean student who pinballs from home to class to the beds of recent Tinder matches. He and Jaehee, his female best friend and roommate, frequent nearby bars where they push away their anxieties about their love lives, families, and money with rounds of soju and ice-cold Marlboro Reds that they keep in their freezer. Yet over time, even Jaehee leaves Young to settle down, leaving him alone to care for his ailing mother and to find companionship in his relationships with a series of men, including one whose handsomeness is matched by his coldness, and another who might end up being the great love of his life. A brilliantly written novel that takes us into the glittering nighttime of Seoul and the bleary-eyed morning after with both humor and emotion, *Love in the Big City* is a wry portrait of millennial loneliness as well as the abundant joys of queer life.

Visible Learning John Hattie.2008-11-19 This unique and ground-breaking book is the result of 15 years research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers - an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

Classroom Lessons Kate McGilly.1994 A timely complement to John Bruer's Schools for Thought, Classroom Lessons documents eight projects that apply cognitive research to improve classroom practice. The chapter authors are all principal investigators in an influential research initiative on cognitive science and education. Classroom Lessons describes their collaborations with classroom teachers aimed at improving teaching and learning for students in grades K-12. The eight projects cover writing, mathematics, history, social science, and physics. Together they illustrate that principles emerging from cognitive science form the basis of a science of instruction that can be applied across the curriculum. The book is divided into three sections: applications of cognitive research to teaching specific content areas; applications for learning across the curriculum; and applications that challenge traditional concepts of classroom-based learning environments. Chapters consider explicit models of knowledge with corresponding instruction designed to enable learners to build on that knowledge, acquisition of specified knowledge, and what knowledge is useful in contemporary curricula. Contributors Kate McGilly, Sharon A. Griffin, Robbie Case, and Robert S. Siegler. Earl Hunt and Jim Minstrell. Kathryn T. Spoehr. Howard Gardner, Mara Krechevsky, Robert J. Deep Time of the Media Siegfried Zielinski.2008-02-15 A quest to find something new by excavating the deep time of media's development—not by simply looking at new media's historic forerunners, but by connecting models, machines, technologies, and accidents that have until now remained separated. Deep Time of the Media takes us on an archaeological quest into the hidden layers of media development—dynamic moments of intense activity in media design and construction that have been largely ignored in the historical-media archaeological record. Siegfried Zielinski argues that the history of the media does not proceed predictably from primitive tools to complex machinery; in Deep Time of the Media, he illuminates turning points of media history—fractures in the predictable—that help us see the new in the old. Drawing on original source materials, Zielinski explores the technology of devices for hearing and seeing through two thousand years of cultural and technological history. He discovers the contributions of dreamers and modelers of media worlds, from the ancient Greek philosopher Empedocles and natural philosophers of the Renaissance and Baroque periods to Russian avant-gardists of the early twentieth century. Media are spaces of action for constructed attempts to connect what is separated, Zielinski writes. He describes models and machines that make this connection: including a theater of mirrors in sixteenth-century Naples, an automaton for musical composition created by the seventeenth-century Jesuit Athanasius Kircher, and the eighteenth-century electrical tele-writing machine of Joseph Mazzolari, among others. Uncovering these moments in the media-archaeological record, Zielinski says, brings us into a new relationship with present-day moments; these discoveries in the deep time media history shed light on today's media landscape and may help us map our expedition to the media future.

Gender, Science and Mathematics L. H. Parker, L. Rennie, B. Fraser.1995-12-31 Throughout the Western world, the relationship between gender, science and mathematics has emerged as critical in a variety of contexts. In tertiary institutions, the study of gender issues, frequently with reference to science and mathematics, is of central significance to many disciplines. Gender studies are being offered as separate courses or parts of existing courses in preservice and postgraduate teacher education, women's studies, technology studies and policy studies. In addition, in the broader context of education at all levels from primary/elementary through to higher, concerned policy-makers and practitioners frequently focus on the interaction of gender, science and mathematics in their attempts to reform and improve education for all students. In all of these contexts, there is an urgent need for suitable texts, both to provide resources for teachers and students and to inform policy-makers and practitioners. This book has been developed specifically to meet this need. It is designed to be used throughout the world in a variety of tertiary courses and by policy-makers concerned with activities which interface with the gender/science/mathematics relationship. It provides examples which illustrate vividly the rich field from which practitioners and policy-makers in this area now can draw. Its particular appeal will stem from its practical approach and creative future perspective, the international renown of the authors and the generalisability of the recent research and thinking presented in each of the chapters.

Martyn Pig Kevin Brooks.2014-07 Did I hate him? Of course I hated him. But I never meant to kill him. Martyn hated his dad, but he never meant him to die. And now he has to tell the police what happened. Or hide the body. Simple, right? Not quite. One story leads to another. Secrets and lies become darker and crazier. And then everything shatters. Life is never easy. But death is even harder.

Why We Took the Car Wolfgang Herrndorf.2014-01-07 A beautifully written, darkly funny coming-of-age story from an award-winning, bestselling German author making his American debut. Mike Klingenberg doesn't get why people think he's boring. Sure, he doesn't have many friends. (Okay, zero friends.) And everyone laughs at him when he reads his essays out loud in class. And he's never invited to parties - including the gorgeous Tatiana's party of the year.Andre Tschichatschow, aka Tschick (not even the teachers can pronounce his name), is new in school, and a whole different kind of unpopular. He always looks like he's just been in a fight, his clothes are tragic, and he never talks to anyone.But one day Tschick shows up at Mike's house out of the blue. Turns out he wasn't invited to Tatiana's party either, and he's ready to do something about it. Forget the popular kids: Together, Mike and Tschick are heading out on a road trip. No parents, no map, no destination. Will they get hopelessly lost in the middle of nowhere? Probably. Will meet some crazy people and get into serious trouble? Definitely. But will they ever be called boring again? Not a chance.
