Scarcity Or Abundance?: A Debate on the Environment Norman Myers, Julian L. Simon. 1994-08-01 These and other questions are discussed by environmentalist Norman Myers, and Julian Simon, an economist and outspoken sceptic on environmentalism. This book is a transcript of their provocative exchange in a debate held at Columbia University in October 1992. The authors also provide position statements and replies that let readers judge for themselves whose arguments are more persuasive.

The Company Town John Garner. 1992-10-01 Built by industrialists whose early businesses contributed to the escalation of the Industrial Revolution, company towns flourished in countries that embraced capitalism and open-market trading. In many instances, the company town came to symbolize the wrecking of the environment, especially in places associated with extractive industries such as mining and lumber milling. Some resident industrialists, however, took a genuine interest in the welfare of their work forces, and in a number of instances hired architects to provide a model environment. Overtaken by time, these towns were either abandoned or caught up in suburban growth. The most thorough-going and only international assessment of the company town, this collection of essays by specialists and authorities of each region offers a balanced account of architectural and social history and provides a better understanding of the architectural and urban experiences of the early industrial age.

Tender Mint Samih al Qasim. 2017 In september 2011 verhuist Lynn Alleva Lilley (USA) met haar man en twee kinderen naar Amman, Jordanië. Ver weg van haar geboorteland en van haar vader, die ziek op dat moment is probeert ze een thuis te maken voor haar gezin in de onbekende stad. Daar gebruikt ze haar fotografie om dit, voor haar, vreemde land vertrouwd te maken. Gedurende drie jaar fotografeerde ze het Jordaanse volk, Syrische en Iraakse vluchtelingen, dieren in private dierentuinen of boerderijen, de vogeltrek en landschappen. Thema's als misplaatsing, beknelling en adaptatie zijn sterk terug te vinden in dit boek. Haar vervreemdende beelden drukken tegenstrijdige emoties uit als verzorging en pijn, lijden en berusting, eenzaamheid en gezelschap, schoonheid en verval.

The West African Orogens and Circum-Atlantic Correlatives R.D. Dallmeyer, J.P. Lecorche. 2012-12-06 In December, 1987, Project 233 of the International Geological Correlation Program hosted an international conference in Nouakchott, Mauritania. Discussions were focused on the Tectonothermal Evolution Of The West African Orogens And Circum-Atlantic Terrane Linkages. A wealth of new information was presented during the conference, and it was apparent that the time was appropriate to prepare a systematic volume dealing with the geology of northwest Africa. The present volume is an outgrowth of this conference, but is not merely a compilation of the papers presented in Nouakchott. Instead, it represents a coordinated volume designed to present a balanced, comprehensive view of our present understanding of West African geology and potential correlations in other Circum-Atlantic Paleozoic orogens. We sincerely appreciate the efforts of all the reviewers whose comments have greatly helped to improve the quality of this volume. We also thank the various contributors for their diligence and perseverance in manuscript preparation. The calibre of the present volume is a reflection of their labor. Shrinking Cities: International research Philipp Oswalt. 2005 Shrinking Cities: Volume 1 ~ ISBN 3-7757-1682-3 U.S. \$55.00 / Paperback, 6.75 x 9 in. / 736 pgs / 389 color and 114 b&w. ~ Item / February / Architecture A decade ago, the prevailing wisdom was that cities grow, sprawling ever wider... In fact, while city dwellers make up nearly half the world's population, new research by the United Nations and other demographers has shown that for every two cities that are growing, three are shrinking. Some cities that were bustling centers of commerce just a generation ago have become modern-day Pompeii. --The New York Times

Thinking 3D Daryl Green, Laura Moretti. 2019 During the Renaissance, artists and illustrators developed the representation of truthful three-dimensional forms into a highly skilled art. As reliable illustrations of three-dimensional subjects became more prevalent, they also influenced the ways in which disciplines developed: architecture could be communicated much more clearly, mathematical concepts and astronomical observations could be quickly relayed, and observations of the natural world moved towards a more realistic method of depiction. Through essays on some of the world's greatest artists and thinkers--such as Leonardo da Vinci, Luca Pacioli, Andreas Vesalius, Johann Kepler, Galileo Galilei, William Hunter, and many more--this book tells the story of how we learned to communicate three-dimensional forms on the two-dimensional page. It features some of Leonardo da Vinci's ground-breaking drawings now in the Royal Collections and British Library as well as extraordinary anatomical illustrations, early paper engineering such as volvelles and flaps, beautiful architectural plans, and even views of the moon. With in-depth analysis of more than forty manuscripts and books, Thinking 3D also reveals the impact that developing techniques had on artists and draftsmen throughout time and across space, culminating in the latest innovations in computer software and 3D printing.

North Warning System Donovan Wylie. 2014 Volume 1. The British army used a system of high-tech watchtowers to survey the territories of Northern Ireland, and to observe the actions of the local people under their occupation. These towers, constructed in the mid 1980s, primarily in the mountainous border region of South Armagh, were landmarks in a thirty year conflict euphemistically called the Troubles. The Towers were

demolished between 2000 and 2007 as part of the British government Demilitarization program for Northern Ireland. Prior to their demolition Donovan Wylie photographed the Towers, working at an elevated height made possible by military helicopter. -- Dust jacket.

Heroes of Invention Christine MacLeod.2010-06-24 This innovative study adopts a distinct perspective on both the industrial revolution and nineteenth-century British culture. It investigates why inventors rose to heroic stature and popular acclaim in Victorian Britain, attested by numerous monuments, biographies and honours, and contends there was no decline in the industrial nation's self-esteem before 1914. In a period notorious for hero-worship, the veneration of inventors might seem unremarkable, were it not for their previous disparagement and the relative neglect suffered by their twentieth-century successors. Christine MacLeod argues that inventors became figureheads of various nineteenth-century factions, from economic and political liberals to impoverished scientists and radical artisans, who deployed their heroic reputation, not least to challenge the aristocracy's hold on power and the militaristic national identity that bolstered it. Although this was a challenge that ultimately failed, its legacy of ideas about invention, inventors, and the history of the industrial revolution remains highly influential.

The Rejection of Consequentialism Samuel Scheffler.1994-08-11 In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

Archaeological Chemistry VIII Ruth Ann Armitage,James Hutson Burton.2013 The 12th Archaeological Chemistry Symposium was held as part of the Spring ACS National Meeting in New Orleans, Louisiana, April 7-11, 2013. This volume is a compilation of presentations from the Symposium, the latest in a long tradition that began at the ACS National Meeting in Philadelphia in 1950. The papers herein show that archaeological chemistry today is more than the usual studies of trace elements in pottery and lithics, which continue to contribute to our understanding of human behavior in the past. New areas of research include more focus on portability to analyze pigments in situ and artifacts in museums, nascent developments in non- and minimally destructive chemical characterization, new applications of isotopic analyses, and an increasing interest in archaeological biomolecules. This volume is divided into sections that roughly follow those of the Symposium: Pigments, Residues and Material Analysis, X-Ray Fluorescence Spectroscopy, and Isotopes in Archaeology. The first section, Pigments and Dyes, begins with a review of manuscript pigments by Dr. Mary Virginia Orna, the organizer of the 9th Archaeological Chemistry Symposium and Editor of *Archaeological Chemistry: Organic, Inorganic, and Biochemical Analysis* (2). Each of the following sections begins with a review paper from one of the invited speakers. Dr. Valerie Steele, now at the University of Bradford in the Department of Archaeological Science, provides an overview of the state - for better and for worse - of analyses of archaeological residues. Portable X-ray fluorescence instruments are becoming extremely common in archaeological chemistry investigations; Dr. Aaron Shugar of Buffalo State University provides in his chapter some perspectives and warnings against the indiscriminate use of this technology. Finally, Dr. Matthew Sponheimer gives an overview of the contributions of stable carbon isotope and trace metal studies in understanding early hominin diets. The final chapter of the book provides a perspective on the earliest work in archaeological chemistry in the 18th century and brings us up to today's challenges

The Late Eocene Earth Christian Koeberl,Alessandro Montanari.2009 The Late Eocene and the Eocene-Oligocene (E-O) transition mark the most profound oceanographic and climatic changes of the past 50 million years of Earth history, with cooling beginning in the middle Eocene and culminating in the major earliest Oligocene Oi-1 isotopic event. The Late Eocene is characterized by an accelerated global cooling, with a sharp temperature drop near the E-O boundary, and significant stepwise floral and faunal turnovers. These global climate changes are commonly attributed to the expansion of the Antarctic ice cap following its gradual isolation from other continental masses. However, multiple extraterrestrial bolide impacts, possibly related to a comet shower that lasted more than 2 million years, may have played an important role in deteriorating the global climate at that time. This book provides an up-to-date review of what happened on Earth at the end of the Eocene Epoch.

Landscape and Sustainable Development Council of Europe.2006-01-01 The Council of Europe landscape convention was adopted in Florence (Italy) on 20 October 2000 with the aim of promoting the protection, management and planning of European landscape and organising European co-operation in this area. It is the first international treaty covering all aspects of European landscape. It applies to the entire territory of the contracting parties and covers natural, rural, urban and peri-urban areas. It concerns landscapes that might be considered outstanding, commonplace or deteriorated. By taking into account landscape, culture and nature, the Council of Europe seeks to protect the quality of life and well-being of Europeans in a sustainable development perspective.

The Life and Death of Sophie Stark Anna North.2015-05-19 Winner of the 2016 Lambda Literary Award for Bisexual Fiction "I read *The Life and Death of Sophie Stark* with my heart in my mouth. Not only a dissection of genius and the havoc it can wreak, but also a thunderously good story."—Emma Donoghue, New York Times bestselling author of *Room* "This novel is perceptive, subtle, funny and lingers in unexpected ways. The analysis of a woman who puts her art above all else is equal parts inspiration and warning story. Anna North makes prose look easy."—Lena Dunham Gripping and provocative, *The Life and Death of Sophie Stark* is a haunting story of fame, love, and legacy told through the propulsive rise of an iconoclastic artist. Sophie Stark begins her filmmaking career by creating a documentary about her obsession, Daniel, a college basketball star. But when she becomes too invasive, she finds herself the victim of a cruel retribution. The humiliation doesn't stop her. Visionary and unapologetic, Sophie begins to use stories from the lives of those around her to create movies, and as she gains critical recognition and acclaim, she risks betraying the one she loves most. Told in a chorus of voices belonging to those who knew Sophie best, *The Life and Death of Sophie Stark* is an intimate portrait of an elusive woman whose monumental talent and relentless pursuit of truth reveal the cost of producing great art. It is "not only a dissection of genius and the havoc it can wreak, but also a thunderously good story" (Emma Donoghue).

The Bioarchaeology of Metabolic Bone Disease Megan Brickley, Rachel Ives.2010-07-26 The Bioarchaeology of Metabolic Bone Disease provides a comprehensive and invaluable source of information on this important group of diseases. It is an essential guide for those engaged in either basic recording or in-depth research on human remains from archaeological sites. The range of potential tools for investigating metabolic diseases of bone are far greater than for many other conditions, and building on clinical investigations, this book will consider gross, surface features visible using microscopic examination, histological and radiological features of bone, that can be used to help investigate metabolic bone diseases. Clear photographs and line drawings illustrate gross, histological and radiological features associated with each of the conditions. Covers a range of issues pertinent to the study of metabolic bone disease in archaeological skeletal material, including the problems that frequent co-existence of these conditions in individuals living in the past raises, the preservation of human bone and the impact this has on the ability to suggest a diagnosis of a condition. Includes a range of conditions that can lead to osteopenia and osteoporosis, including previous investigations of these conditions in archaeological bone.

Evaporites Through Space and Time B. Charlotte Schreiber, S. Lugli, M. Babel.2007 This book is an exploration of varying approaches to the study of the deposition, diagenesis and stratigraphy of evaporites. The volume includes papers from chemical modellers, who work on the basis of geochemical representations of the formative water bodies, and from basin-wide depositional-stratigraphical modellers, who propose depositional scenarios that are fitted to individual basinal pictures. Until now there have been only a few studies of evaporite formation that explain the characteristic features we observe in the real rock record. This volume is a collection of relevant papers in which these features are integrated in a realistic manner, based on our new understanding of saline water bodies, to the diverse tectonic, chemical and depositional constraints of their individual basins. In addition there are several review articles that offer oversight and extensive referencing of basins worthy of further study. This book is a valuable resource for sedimentologists and stratigraphers looking for an up-to-date reference on evaporite deposits.

South American Contributions to World Archaeology Mariano Bonomo, Sonia Archila.2021-11-08 This book focuses on South American archaeology and its contributions to the broader global archaeological discussion in theory, methods and new interpretations of the archaeological record. These include discussions on human peopling and colonization of the continent, domestication of plants and emergence of complex societies. This volume covers a wide variety of sub-disciplines in archaeology, including archaeobotany, zooarchaeology, molecular archaeology, bioarchaeology, geoarchaeology. The chapters span from the pre-Columbian to contemporaneous indigenous societies for all the main geographical and ecological zones of South America. The book discusses how particular cases of South American archaeology have contributed to the understanding of a global and basic issue: human relations with their environments and landscapes during the past. The authors focus on the latest results produced by multidisciplinary studies carried out at archaeological sites in several areas of South America ranging from studies of early hunter-gatherers through the historic period. This work would be of interest to researchers in archaeology and Latin American studies.
