Family Medicine J. L. Buckingham,E. P. Donatelle,W. E. Jacott,M. G. Rosen,Robert B. Taylor.2013-06-29 JOHN S. MILLIS In 1966 the Citizens Commission on Graduate Medical Education observed that the explosive growth in biomedical science and the consequent increase in medical skill and technology of the twentieth century had made it possible for physicians to respond to the episodes of illness of patients with an ever-increasing effectiveness, but that the increase in knowledge and technology had forced most physicians to concentrate upon a disease entity, an organ or organ system, or a particular mode of diagnosis or therapy. As a result there had been a growing lack of continuing and comprehensive patient care. The Commission expressed the opinion that Now, in order to bring medicine's enhanced diagnostic and therapeutic powers fully to the benefit of society, it is necessary to have many physicians who can put medicine together again. ! The Commission proceeded to recommend the education and training

of substantial numbers of Primary Physicians who would, by assuming primary responsibility for the patient's welfare in sickness and in health, provide continuing and comprehensive health care to the citizens of the United States. In 1978 it is clear that the recommendation has been accepted by the public, the medical profession, and medical education. There has been a vigorous response in the development of family medicine and in the fields of internal medicine, pediatrics, and obstetrics. One is particularly impressed by the wide acceptance on the part of medical students of the concept of the primary physician. Dr. John S.

Endocrinology S.S. Nussey, S.A. Whitehead. 2001-06-15 Traditionally, endocrinology textbooks have been either short notes or multi-author, multi-volume monster, all of which present clinical material last and often only briefly. Endocrinology is different and used real cases to lead readers into the text and then describes the biochemistry, physiology, and anatomy they need to understand the case. The

Winningham's Critical Thinking Cases in Nursing - E-Book Mariann M. Harding, Julie S. Snyder, Barbara A. Preusser. 2013-12-27 Develop your critical thinking and clinical reasoning skills with 150 realistic case studies from the four major clinical practice areas: medical-surgical, pediatric, maternity, and psychiatric/mental health nursing. Each case covers a common problem, drawn from actual clinical experiences and written by nurses who are clinical experts. All cases have been thoroughly updated and revised to reflect current clinical practices, with integrated content on pharmacology, nutrition, and diagnostic/laboratory tests to encourage you to think critically about all aspects of care. This fifth edition also features an increased emphasis on patient management, and new documentation and communication exercises. Plus new NCLEX® Examination format-questions help you prepare for success on the NCLEX® Examination and provide safe, quality patient care. Three-part organization presents cases in three parts: 1) Medical-Surgical Cases; 2) Pediatric, Maternity, and Psychiatric Cases; and 3) Other/Advanced Cases, the latter covering key topics such as multi-system disorders and emergency situations. Realistic case study approach incorporates cases drawn from actual clinical experiences to help you identify changes, anticipate possible complications, and initiate therapeutic interventions. Increasing case complexity provides you with a foundation on which to build as you advance to more difficult cases. Two new pediatric case studies strengthen your ability to recognize and effectively manage common disorders presenting in pediatric patients. New NCLEX Examination-format questions have been added throughout, including multiple choice, prioritization/ordering, chart/exhibit, and dosage calculation questions. Increased number of higher-level questions requires clinical reasoning rather than simply memorizing and recalling information. An emphasis on patient management reinforces the type of clinical decision-making needed in the clinical setting as well as reflecting the type of questions on the latest NCLEX Examination. Over 25 new illustrations and graphics such as ECG strips, lab/diagnostic test reports, anatomical diagrams, and medication labels are now interwoven throughout the book. New documentation and communication exercises ask you to document relevant patient information or to use the SBAR communication technique to communicate patient findings to the physician.

Cancer Consult Syed A. Abutalib, Maurie Markman. 2014-06-16 The field of oncology benefits from several large-scale reference books and a host of monographs dedicated to specific cancers. However, truly excellent practice and review books are, surprisingly, quite scarce. Outside of a scant handful of books and online reference tools that offer clinical response practice and board review in a basic question and answer format, there are no resources that offer a robust, engaging, fully referenced tool for these vital activities in every oncologist's and oncology trainee's work. This print and electronic book seeks to fill that void, offering comprehensive question-and-answer style content that covers the entire specialty of oncology and provides practicing oncologists with a fascinating and immediately applicable compendium of vital information dealing with a well-balanced selection of common and uncommon cancers. At the heart of this book is the editor's and authors' desire to overcome the controversies and barriers to

practice that usually emerge following the appearance of new data. In every section, the user is guided toward collaboration in ongoing clinical research – for example, via discussions of well-designed ongoing clinical trials in each specific area. Developed with both the teacher and learner in mind, this book also offers trainees and fellows an excellent opportunity to enhance their preparation for the ABIM oncology fellowship exam as well as for the oncology boards. It will also be an extremely useful tool for oncologists working toward the recertification exam. This comprehensive, beefy book includes hundreds of painstakingly developed multiple-choice and mini-case-based questions covering the principles of medical oncology, malignant hematology, surgical oncology, and radiation oncology. It also contains mini-cases and questions dealing with the biology, diagnosis, classification, staging, and multidisciplinary treatment of cancers at every anatomic site. The very latest topics are included, such as molecular techniques, targeted therapies, and translational cancer research. Concise but detailed answers are referenced to key journals and books, and evidence-based wherever possible. NCCN guidelines are also referenced as appropriate. With its powerful focus on take-home messages from and for actual clinical work, this book will help keep oncologists up to date, bridging the gaps between journal and reference literature, conferences, and their existing knowledge base.

Pharmacology Case Study Workbook Kathy A. Putman, Kathy Putman. 2010-10-25 Written by a distinguished nursing professional with over 25 years of experience, *Pharmacology Case Study Workbook* provides nursing students with an opportunity to apply pharmacology concepts to real-world situations. The text features 50 case studies based on real-life clinical situations that challenge students to think critically and develop effective problem-solving skills. Case studies present patients' medication history, enabling students to learn about the disease process from the point of medication use – an approach used in actual clinical practice. Other features include a review of key terms, home and intensive care scenarios, and a list of variables that must be considered in order to conduct an appropriate case analysis. Also present are a series of questions that will help guide students in developing effective ways to handle the scenario. Perfect for individual or group use, *Pharmacology Case Studies* is a valuable tool to help prepare nursing students for clinical practice!

Challenging Cases in Endocrinology Mark E. Molitch.2002-01-18 Distinguished clinician-scientists describe in concise studies their most difficult cases and reveal what they did, how they did it, and why. The cases cover a wide range of endocrine problems. Each case study reviews how the patient was managed, details the reasons why various tests and treatments-many only recently available-were carried out, and provides references to ensure that those novel methodologies can be easily translated into the endocrine specialist's daily practice. The authors provide practical solutions for these difficult-to-manage cases, and successfully apply knowledge fresh from the laboratory to decisions about patient management. Practical and stimulating, Challenging Cases in Endocrinology demonstrates for every clinical endocrinologist precisely how specialists approach their most challenging cases and how these approaches can be effectively applied in the daily practice of endocrinology.

Clinical Rounds in Endocrinology Anil Bhansali,Anuradha Aggarwal,Girish Parthan,Yashpal Gogate.2016-09-13 This book on pediatric endocrinology covers interesting and yet often challenging cases among pediatric patients in a unique Question-Answer format. Simulating the bedside case discussions during the ward rounds, one question logically leads to another, thereby generating curiosity and promoting evidence-based medicine. Taking the readers through the entire spectrum starting from etiology and pathophysiology to clinical presentation to management principles, each question addresses one key aspect of the disorder. Described in a very simple and lucid narrative, this book ensures sound conceptual understanding while covering each topic comprehensively. This volume covers important topics such as short stature, pubertal disorders, thyroid disorders, childhood Cushing syndrome, rickets and osteomalacia, disorder of sexual differentiation and diabetes in the young. Less common disorder such as multiple endocrine neoplasia has also been incorporated. These cases are not only seen by endocrinologists, but are also managed by paediatricians, internists, obstetricians and gynaecologists, orthopaedicians and surgeons.
