Sacred Darkness Holley Moyes.2012-09-01 Caves have been used in various ways across human society but despite the persistence within popular culture of the iconic caveman, deep caves were never used primarily as habitation sites for early humans. Rather, in both ancient and contemporary contexts, caves have served primarily as ritual spaces. In *Sacred Darkness*, contributors use archaeological evidence as well as ethnographic studies of modern ritual practices to envision the cave as place of spiritual and ideological power and a potent venue for ritual practice. Covering the ritual use of caves in Europe, Asia, Australia, Africa, Mesoamerica, and the US Southwest and Eastern woodlands, this book brings together case studies by prominent scholars whose research spans from the Paleolithic period to the present day. These contributions demonstrate that cave sites are as fruitful as surface contexts in promoting the understanding of both ancient and modern religious beliefs and practices. This state-of-the-art survey of ritual cave use will be one of the most valuable resources for understanding the role of caves in studies of religion, sacred landscape, or cosmology and a must-read for any archaeologist interested in caves.

Hybrid Communities Charles Stépanoff, Jean-Denis Vigne.2018-08-06 Domestication challenges our understanding of human-environment relationships because it blurs the dichotomy between what is artificial and what is natural. In domestication, biological evolution, environmental change, techniques and practices, anthropological trajectories and sociocultural choices are inextricably interconnected. Domestication is essentially a hybrid phenomenon that needs to be explored with hybrid scientific approaches. *Hybrid Communities: Biosocial Approaches to Domestication and Other Trans-species Relationships* attempts for the first time to explore domestication viewed from across disciplines both in its origins and as an ongoing process. This edited collection proposes new biosocial approaches and concepts which integrate the methods of social sciences, archaeology and biology to shed new light on domestication in diachrony and in synchrony. This book will be of great interest to all scholars working on human-environment relationships, and should also attract readers from the fields of social anthropology, archaeology, genetics, ecology, botany, zoology, history and philosophy.

The Archaeology of People Alisdair Whittle.2003-09-02 Alisdair Whittle's new work argues powerfully for the complexity and fluidity of life in the Neolithic, through a combination of archaeological and anthropological case studies and current theoretical debate. The book ranges from the sixth to the fourth millennium BC, and from the Great Hungarian Plain, central and western Europe and the Alpine foreland to parts of southern Britain. Familiar terms such as individuals, agency, identity and structure are dealt with, but Professor Whittle emphasises that they are too abstract to be truly useful. Instead, he highlights the multiple dimensions which constituted Neolithic existence: the web of daily routines, group and individual identities, relations with animals, and active but varied attitudes to the past. The result is a vivid, original and perceptive understanding of the early Neolithic which will offer insights to readers at every level.

Ireland's First Settlers Peter Woodman.2015-12-31 Ireland's First Settlers tells the story of the archaeology and history of the first continuous phase of Ireland's human settlement. It combines centuries of search and speculation about human antiquity in Ireland with a review of what is known today about the Irish Mesolithic. This is, in part, provided in the context of the author's 50 years of personal experience searching to make sense of what initially appeared to be little more than a collection of beach rolled and battered flint tools. The story is embedded in how the island of Ireland, its position, distinct landscape and ecology impacted on when and how Ireland was colonized. It also explores how these first settlers evolved their technologies and lifeways to suit the narrow range of abundant resources that were available. The volume concludes with discussions on how the landscape should be searched for the often ephemeral traces of these early settlers and how sites should be excavated. It asks what we really know about the thoughts and life of the people themselves and what happened to them as farming began to be introduced.

Continuity and Change in Cultural Adaptation to Mountain Environments Ludomir R Lozny.2013-03-12 Up until now, mountain ecosystems have not been closely studied by social scientists as they do not offer a readily defined set of problems for human exploitation as, do for instance, tropical forests or arctic habitats. But the archaeological evidence had shown that humans have been living in this type of habitat for thousands of years. From this evidence we can also see that mountainous regions are often frontier zones of competing polities and form refuge areas for dissident communities as they often are inherently difficult to control by centralized authorities. As a consequence they fuel or contribute disproportionately to political violence. But we are now witnessing changes and increasing vulnerability of mountain ecosystems caused by human activities. Human adaptability to mountain ecosystems This volume presents an international and interdisciplinary account of the exploitation of--and human adaptation to--mountainous regions over time. The contributions discuss human cultural responses to key physical and cultural stressors associated with mountain ecosystems, such as aridity, quality of soils, steep slopes, low productivity, as well as transient phenomena such as changing weather patterns, deforestation and erosion, and the possible effects of climate change. This volume will be of interest to anthropologists, ecologists and geologists as mountainous landscapes change fast and cultures disappear and they need to be recorded, and mountain regions are of interest for studies on environmental change and cultural responses of mountain populations provide clues for us all. Critical to understanding mountain adaptations is our comprehension of human decision-making and how people view short- and long-term outcomes.

In the Light of Evolution National Academy of Sciences.2012-03-01 Biodiversity-the genetic variety of life-is an exuberant product of the evolutionary past, a vast human-supportive resource (aesthetic, intellectual, and material) of the present, and a rich legacy to cherish and preserve for the future. Two urgent challenges, and opportunities, for 21st-century science are to gain deeper insights into the evolutionary processes that foster biotic diversity, and to translate that understanding into workable solutions for the regional and global crises that biodiversity currently faces. A grasp of evolutionary principles and processes is important in other societal arenas as well, such as education, medicine, sociology, and other applied fields including agriculture, pharmacology, and biotechnology. The ramifications of evolutionary thought also extend into learned realms traditionally reserved for philosophy and religion. The central goal of the *In the Light of Evolution (ILE)* series is to promote the evolutionary sciences through state-of-the-art colloquia-in the series of Arthur M. Sackler colloquia sponsored by the National Academy of Sciences-and their published proceedings. Each installment explores evolutionary perspectives on a particular biological topic that is scientifically intriguing but also has special relevance to contemporary societal issues or challenges. This book is the outgrowth of the Arthur M. Sackler Colloquium Cooperation and Conflict, which was sponsored by the National Academy of Sciences on January 7-8, 2011, at the Academy's Arnold and Mabel Beckman Center in Irvine, California. It is the fifth in a series of colloquia under the general title *In the Light of Evolution*. The current volume explores recent developments in the study of cooperation and conflict, ranging from the level of the gene to societies and symbioses. Humans can be vicious, but paradoxically we are

also among nature's great cooperators. Even our great conflicts-wars-are extremely cooperative endeavors on each side. Some of this cooperation is best understood culturally, but we are also products of evolution, with bodies, brains, and behaviors molded by natural selection. How cooperation evolves has been one of the big questions in evolutionary biology, and how it pays or does not pay is a great intellectual puzzle. The puzzle of cooperation was the dominant theme of research in the early years of Darwin's research, whereas recent work has emphasized its importance and ubiquity. Far from being a rare trait shown by social insects and a few others, cooperation is both widespread taxonomically and essential to life. The depth of research on cooperation and conflict has increased greatly, most notably in the direction of small organisms. Although most of *In the Light of Evolution V: Cooperation and Conflict* is about the new topics that are being treated as part of social evolution, such as genes, microbes, and medicine, the old fundamental subjects still matter and remain the object of vigorous research. The first four chapters revisit some of these standard arenas, including social insects, cooperatively breeding birds, mutualisms, and how to model social evolution.

The Palaeolithic Origins of Human Burial Paul Pettitt. 2013-08-21 Humans are unique in that they expend considerable effort and ingenuity in disposing of the dead. Some of the recognisable ways we do this are visible in the Palaeolithic archaeology of the Ice Age. *The Palaeolithic Origins of Human Burial* takes a novel approach to the long-term development of human mortuary activity - the various ways we deal with the dead and with dead bodies. It is the first comprehensive survey of Palaeolithic mortuary activity in the English language. Observations in the modern world as to how chimpanzees behave towards their dead allow us to identify 'core' areas of behaviour towards the dead that probably have very deep evolutionary antiquity. From that point, the palaeontological and archaeological records of the Pliocene and Pleistocene are surveyed. The core chapters of the book survey the mortuary activities of early hominins, archaic members of the genus *Homo*, early *Homo sapiens*, the Neanderthals, the Early and Mid Upper Palaeolithic, and the Late Upper Palaeolithic world. Burial is a striking component of Palaeolithic mortuary activity, although existing examples are odd and this probably does not reflect what modern societies believe burial to be, and modern ways of thinking of the dead probably arose only at the very end of the Pleistocene. When did symbolic aspects of mortuary ritual evolve? When did the dead themselves become symbols? In discussing such questions, *The Palaeolithic Origins of Human Burial* offers an engaging contribution to the debate on modern human origins. It is illustrated throughout, includes up-to-date examples from the Lower to Late Upper Palaeolithic, including information hitherto unpublished.

L'aventure mystérieuse de Poe à Merrit ou l'Orphelin de Gilgamesh Lauric Guillaud. 1993 L'essence même de la fiction, c'est l'aventure. Des premiers romans grecs jusqu'aux contemporains, on n'a cessé de célébrer le voyage vers l'inconnu, géographique ou mythique. Malgré la disparition des taches blanches sur les cartes, l'aventure moderne a gardé intact son rapport à l'imaginaire et au mystère. Parallèlement à la colonisation se développe au 19^e siècle un genre littéraire populaire qui fait intervenir le fantastique, le merveilleux et même la science-fiction. Qu'on explore l'Atlantide ou le centre de la Terre, les pôles ou les forêts les plus impénétrables, le cadre est " vraisemblable ", celui des terres vierges qu'explorent les conquérants modernes. Ces " orphelins de Gilgamesh " découvrent des mondes oubliés, peuplés de créatures monstrueuses ou féeriques. C'est à un véritable voyage au pays des merveilles qu'est convié le lecteur, à travers un panorama des œuvres les plus marquantes de l'" aventure mystérieuse " , d'Edgar Allan Poe à Abraham Merritt, en passant par Henry Rider Haggard, Arthur Conan Doyle et Edgar Rice Burroughs.

Skeletal Variation and Adaptation in Europeans Christopher B. Ruff. 2018-03-27 A comprehensive analysis of changes in body form and skeletal robusticity from the Terminal Pleistocene through the Holocene, leading to the modern European human phenotype. *Skeletal Variation and Adaptation in Europeans: Upper Paleolithic to the Twentieth Century* brings together for the first time the results of an unprecedented large-scale investigation of European skeletal remains. The study was conducted over ten years by an international research team, and includes more than 2,000 skeletons spanning most of the European continent over the past 30,000 years, from the Early Upper Paleolithic to the 20th century. This time span includes environmental transitions from foraging to food production, small-scale to large-scale urban settlements, increasing social stratification and mechanization of labor, and climatic changes. Alterations in body form and behavior in response to these transitions are reconstructed through osteometric and biomechanical analyses. Divided into four sections, the book includes an introduction to the project and comprehensive descriptions of the methods used; general continent-wide syntheses of major trends in body size, shape, and skeletal robusticity; detailed regional analyses; and a summary of results. It also offers a full data set on an external website. Brings together data from an unprecedented large-scale study of human skeletal and anatomical variations Includes appendix of specific information from each research site Synthesizes data from spatial, temporal, regional, and geographical perspectives *Skeletal Variation and Adaptation in Europeans* will be a valuable resource for bioarchaeologists, palaeoanthropologists, forensic anthropologists, medical historians, and archaeologists at both the graduate and post-graduate level.

Enclosing Space, Opening New Ground Tanja Romankiewicz, Manuel Fernández-Götz, Gary Lock, Olivier Büchsenschütz. 2019-03-31 Enclosures are among the most widely distributed features of the European Iron Age. From fortifications to field systems, they demarcate territories and settlements, sanctuaries and central places, burials and ancestral grounds. This dividing of the physical and the mental landscape between an "inside" and an "outside" is investigated anew in a series of essays by some of the leading scholars on the topic. The contributions cover new ground, from Scotland to Spain, between France and the Eurasian steppe, on how concepts and communities were created as well as exploring

specific aspects and broader notions of how humans marked, bounded and guarded landscapes in order to connect across space and time. A recurring theme considers how Iron Age enclosures created, curated, formed or deconstructed memory and identity, and how by enclosing space, these communities opened links to an earlier past in order to understand or express their Iron Age presence. In this way, the contributions examine perspectives that are of wider relevance for related themes in different periods.

What Is Paleolithic Art? Jean Clottes. 2016-04-25 The noted archaeologist explores the varieties of prehistoric cave art across the world and offers surprising insights into its purpose and meaning. What drew our Stone Age ancestors into caves to paint in charcoal and red hematite, to watch the likenesses of lions, bison, horses, and aurochs as they flickered by firelight? Was it a creative impulse, a spiritual dawn, a shamanistic conception of the world? In this book, Jean Clottes, one of the most renowned figures in the study of cave paintings, pursues an answer to the “why” of Paleolithic art. Discussing sites and surveys across the world, Clottes offers personal reflections on how we have viewed these paintings in the past, what we learn from looking at them across geographies, and what these paintings may have meant—and what function they may have served—for their artists. Steeped in Clottes’s shamanistic theories of cave painting, *What Is Paleolithic Art?* travels from well-known Ice Age sites like Chauvet, Altamira, and Lascaux to visits with contemporary aboriginal artists, evoking a continuum between the cave paintings of our prehistoric past and the living rock art of today. Clottes’s work lifts us from the darkness of our Paleolithic origins to reveal surprising insights into how we think, why we create, why we believe, and who we are

Ornaments and Other Ambiguous Artifacts from Franchthi Catherine Perlès. 2023-12-05 The famous Franchthi Cave excavations in Greece brought to light an exceptionally long sequence of ornaments, spanning from the earliest Upper Paleolithic to the end of the Neolithic. This volume focuses on the Neolithic, whose assemblages are far more diversified than those of earlier times. The introduction during the Neolithic of entirely artificial shapes, geometric and anthropomorphic, creates a marked departure from earlier periods and shows new directions in creativity by the bead makers. It also denotes a conceptual break in the treatment of shell, no longer solely a natural element barely modified by perforation, but now also a raw material rendered anonymous by workmanship. Due to the systematic sieving of the sediments and its location by the sea, the Franchthi cave and its outdoor settlement, the Paralia, yielded one of the richest collection of ornaments for Neolithic Greece.

The Archaeology of Europe’s Drowned Landscapes Geoff Bailey, Nena Galanidou, Hans Peeters, Hauke Jöns, Moritz Mennenga. 2020-04-09 This open access volume provides for the first time a comprehensive description and scientific evaluation of underwater archaeological finds referring to human occupation of the continental shelf around the coastlines of Europe and the Mediterranean when sea levels were lower than present. These are the largest body of underwater finds worldwide, amounting to over 2500 find spots, ranging from individual stone tools to underwater villages with unique conditions of preservation. The material reviewed here ranges in date from the Lower Palaeolithic period to the Bronze Age and covers 20 countries bordering all the major marine basins from the Atlantic coasts of Ireland and Norway to the Black Sea, and from the western Baltic to the eastern Mediterranean. The finds from each country are presented in their archaeological context, with information on the history of discovery, conditions of preservation and visibility, their relationship to regional changes in sea-level and coastal geomorphology, and the institutional arrangements for their investigation and protection. Editorial introductions summarise the findings from each of the major marine basins. There is also a final section with extensive discussion of the historical background and the legal and regulatory frameworks that inform the management of the underwater cultural heritage and collaboration between offshore industries, archaeologists and government agencies. The volume is based on the work of COST Action TD0902 SPLASHCOS, a multi-disciplinary and multi-national research network supported by the EU-funded COST organisation (European Cooperation in Science and Technology). The primary readership is research and professional archaeologists, marine and Quaternary scientists, cultural-heritage managers, commercial and governmental organisations, policy makers, and all those with an interest in the sea floor of the continental shelf and the human impact of changes in climate, sea-level and coastal geomorphology.

Hunter-Gatherer Archaeobotany Sarah L.R. Mason, Jon G Hather. 2016-09-17 Hunter-Gatherer Archaeobotany shows how archaeobotanical investigations can broaden our understanding of the much wider range of plants that have been of use to people in the recent and more distant past. The book comprises sixteen papers covering aspects of the archaeobotany of wild plants ranging across the northern hemisphere from Japan, across America, Europe and into the Near East. Sites examined span the Upper Palaeolithic to the recent past and demonstrate how such studies can extend our understanding of human interaction with plants throughout our history.

You simply need to register and activate your free account, browse through the categories or search for eBooks in the search bar, select the TXT or PDF as preferred format and enjoy your free read. Monthly "all you can eat" subscription services are now mainstream for music, movies, and TV. Will they be as popular for e-books as well? If your public library has a subscription to OverDrive then you can borrow free Kindle books from your library just like how you'd check out a paper book. Use the Library Search page to find out which libraries near you offer OverDrive. With more than 29,000 free e-books at your fingertips, you're bound to find one that interests you here. You have the option to browse by most popular titles, recent reviews, authors, titles, genres, languages, and more. These books are compatible for Kindles, iPads and most e-readers. Since it's a search engine, browsing for books is almost impossible. The closest thing you can do is use the Authors dropdown in the navigation bar to browse by authors—and even then, you'll have to get used to the terrible user interface of the site overall.
