The Murders of Richard III Elizabeth Peters.2009-10-13 In a remote English manor house, modern admirers of the much-maligned King Richard III—one of Shakespeare's most extraordinary villains—are gathered for a grand weekend of dress-up and make-believe murder. But the fun ends when the masquerade turns more sinister . . . and deadly. Jacqueline Kirby, an American librarian on hand for the festivities, suddenly finds herself in the center of strange, dark doings . . . and racing to untangle a murderous puzzle before history repeats itself in exceptionally macabre ways.

**The Way We Were** Alan Oppedal.2019-07 Water, sunshine, blue skies and faith sustained those who created the communities of rural Iowa. We now remember them as an ideal existence. That was hardly the case. It was a time of backbreaking labor and between every memory we now regard with fondness, there were long stretches of tedium, dust, chilblains, illnesses and sometimes tragedy. We surely would not want to return to those days, but there are lessons to be learned from them. Most important was the continuing confidence our forebears had in the future. Even during times of economic calamity, they persevered. They really saved our nation during the years of the Great Depression. We honor what we now call our Greatest Generation, and that accolade is deserved, but we should also honor those who raised that generation. We should also remember their great dedication to education and their hope that their children would experience a better life than the one that they had endured.

**Perspectives on Nature Conservation** John Tiefenbacher.2012 Perspectives on Nature Conservation demonstrates the diversity of information and viewpoints that are critical for appreciating the gaps and weaknesses in local, regional and hemispheric ecologies, and also for understanding the limitations and barriers to accomplishing critical nature conservation projects. The book is organized to emphasize the linkages between the geographic foci of conservation projects and the biological substances that we conceptualize as nature, through original research. The reader moves through perspectives of diminishing spatial scales, from smaller to larger landscapes or larger portions of the Earth, to learn that the range of factors that promote or prevent conservation through the application of scholarship and academic concepts change with the space in question. The book reflects disciplinary diversity and a co-mingling of science and social science to promote understanding of the patterns of, pressures on and prospects for conservation.

**Pet Nation** Mark Cushing.2021-09-21 Now in paperback and with an update about pets during COVID. In the last 20 years pets have gone from the backyard to sleeping on our beds, then showing up in every corner of America. Pet Nation tells the story of this seismic shift and the economic, media, legal, political, and social dramas springing from this cultural transformation. Since 1998 the pet population in the U.S. has almost doubled -- about two-thirds of the country now owns a pet. No longer left to wander the neighborhood, dogs and cats eat special food, get individualized medical attention, and even fly in the cabin. As founder of the Animal Policy Group, Mark Cushing provides an inside look at the rise of Pet Nation, tracking the myriad ways pets are acquired (a Canine Freedom Train runs south to north), reporting on pet rights legislation (and the unseen problems that come with elevating their status), pet healthcare (revealing the truth and myths about large scale breeders), and discovering that despite what many organizations would have us believe, there is a shortage of dogs. Insightful, surprising, and full of great stories, Pet Nation opens our eyes to the big changes happening in front of us right now. It shows us not only what our love of animals says about pets, it shows us what it says about ourselves.

**Climate Change and Crop Production** Matthew P. *Rangeland Desertification* Olafur Arnalds, Steve Archer.2013-03-09 Desertification has occurred worldwide. The biophysical and socio-economic complexity of this phenomenon has challenged our ability to categorize, inventory, monitor and repair the condition of degraded lands. One of the most important distinctions to be made in relation to land degradation is between cultivated land used for annual crop production and 'rangelands'. Grazing by free-roaming livestock is the traditional primary use of the world's rangelands. However, there is growing recognition of the importance

of these vast acreages for wildlife habitat, hydrology and ground water recharge, recreation and aesthetics. This text focuses on the desertification of rangelands and explores processes, problems and solutions. Chapters in the first section evaluate interactions between 'natural' and human-induced disturbance regimes, thresholds, and non-linear change with respect to vegetation, hydrology, nutrients and erosion. Chapters in the second section examine socio-economic constraints and approaches for preventing and reversing degradation. The book provides a contemporary, process-oriented perspective on rangeland degradation of value to students, policy-makers and professionals alike.

*Rhizomania* Enrico Biancardi, Tetsuo Tamada. 2016-09-20 The knowledge of ecology and epidemiology of rhizomania is particularly useful to understand the means and practices able to limit or avoid its further diffusion. Some promising methods of biological control using coexisting and non-pathogenic organisms could potentially help improve the action of the not completely effective genetic resistances. This integrated protection would be valuable, especially in the even more frequent development of resistance-breaking strains in the BNYVV, where the known types of resistance, alone or in combination, seem to have lost part of their original ability to protect the crop. Therefore, further efforts will be needed to discover new traits likely still present in the wild species of the genus Beta. The availability of large collections of germplasm stored in the International Beta gene-banks should ensure the enhanced efficiency of genetic resistance by means of conventional and marker-assisted selection methods. Some almost immune transgenic varieties seem already to be waiting for release where and when it will be possible. The introduction chapter describes briefly the sugar beet crop, the more common diseases, and the damage caused by rhizomania. The following chapters discuss biological properties of the causal virus, BNYVV, and its vector, *Polymyxa betae*, and their interactions with the environment and the host-plant. In particular, the great advances in research of the molecular biology of BNYVV should be noteworthy, which have been established by a wide range of the most modern methods. Recent work focused on the genetic diversity and evolution of BNYVV is moving forward our understanding of the dramatic worldwide epidemics of rhizomania. Newly developed molecular techniques also lead to practical applications, such as quantification of inoculum in ecological and epidemiological research.

**Translingual Identities and Transnational Realities in the U.S. College Classroom** Heather Robinson, Jonathan Hall, Nela Navarro. 2020-02-18

Exploring the roles of students' pluralistic linguistic and transnational identities at the university level, this book offers a novel approach to translanguaging by highlighting students' perspectives, voices, and agency as integral to the subject. Providing an original reconsideration of the impact of translanguaging, this book examines both transnationality and translinguality as ubiquitous phenomena that affect students' lives. Demonstrating that students are the experts of their own language practices, experiences, and identities, the authors argue that a proactive

translingual pedagogy is more than an openness to students' spontaneous language variations. Rather, this proactive approach requires students and instructors to think about students' holistic communicative repertoire, and how it relates to their writing. Robinson, Hall, and Navarro address students' complex negotiations and performative responses to the linguistic identities imposed upon them because of their skin color, educational background, perceived geographical origin, immigration status, and the many other cues used to minoritize them. Drawing on multiple disciplinary discourses of language and identity, and considering the translingual practices and transnational experiences of both U.S. resident and international students, this volume provides a nuanced analysis of students' own perspectives and self-examinations of their complex identities. By introducing and addressing the voices and self-reflections of undergraduate and graduate students, the authors shine a light on translingual and transnational identities and positionalities in order to promote and implement inclusive and effective pedagogies. This book offers a unique yet essential perspective on translinguality and transnationality, and is relevant to instructors in writing and language classrooms; to administrators of writing programs and international student support programs; and to graduate students and scholars in language education, second language writing, applied linguistics, and literacy studies.

*Essays on Citizenship* Sir Bernard Crick. 2005-11-15 Citizenship, both the subject and the practice, should be a bridge between the vocational aims of education and education for its own sake. Not all of life is productive: there is leisure, there is culture, both of which active citizens can defend, indeed enhance. This book may, I hope, help teachers and all involved in education (governors, parents and even inspectors) gain or reinforce a sense of civic pride and mission.
