The Mom Test Rob Fitzpatrick.2013-10-09 The Mom Test is a quick, practical guide that will save you time, money, and heartbreak. They say you shouldn't ask your mom whether your business is a

good idea, because she loves you and will lie to you. This is technically true, but it misses the point. You shouldn't ask anyone if your business is a good idea. It's a bad question and everyone will lie to you at least a little. As a matter of fact, it's not their responsibility to tell you the truth. It's your responsibility to find it and it's worth doing right. Talking to customers is one of the foundational skills of both Customer Development and Lean Startup. We all know we're supposed to do it, but nobody seems willing to admit that it's easy to screw up and hard to do right. This book is going to show you how customer conversations go wrong and how you can do better.

The Fingerprint U. S. Department Justice.2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

Teaching Engineering, Second Edition Phillip C. Wankat, Frank S. Oreovicz. 2015-01-15 The majority of professors have never had a formal course in education, and the most common method for learning how to teach is on-the-job training. This represents a challenge for disciplines with ever more complex subject matter, and a lost opportunity when new active learning approaches to education are yielding dramatic improvements in student learning and retention. This book aims to cover all aspects of teaching engineering and other technical subjects. It presents both practical matters and educational theories in a format useful for both new and experienced teachers. It is organized to start with specific, practical teaching applications and then leads to psychological and educational theories. The practical orientation section explains how to develop objectives and then use them to enhance student learning, and the theoretical orientation section discusses the theoretical basis for learning/teaching and its impact on students. Written mainly for PhD students and professors in all areas of engineering, the book may be used as a text for graduate-level classes and professional workshops or by professionals who wish to read it on their own. Although the focus is engineering education, most of this book will be useful to teachers in other disciplines. Teaching is a complex human activity, so it is impossible to develop a formula that guarantees it will be excellent. However, the methods in this book will help all professors become good teachers while spending less time preparing for the classroom. This is a new edition of the well-received volume published by McGraw-Hill in 1993. It includes an entirely revised section on the Accreditation Board for Engineering and Technology (ABET) and new sections on the characteristics of great teachers, different active learning methods, the application of technology in the classroom (from clickers to intelligent tutorial systems), and how people learn.

Informing Progress John F. Pane.2017 The basic concept of personalized learning (PL)--instruction that is focused on meeting students' individual learning needs while incorporating their interests and preferences--has been a longstanding practice in U.S. K-12 education. Options for personalization have increased as personal computing devices have become increasingly affordable

and available in schools and developers created software to support individual student learning. In recent years, it has become more common for schools to embrace schoolwide models of PL. We collected data from schools in the Next Generation Learning Challenges (NGLC)'s Breakthrough School Models program. Our study seeks to describe the practices and strategies these schools used to implement PL, understand some of the challenges and facilitators, and consider these alongside achievement findings to discern patterns that may be informative. Teachers and students reported higher levels of many aspects of personalization than their counterparts in a national sample. These included time for one-on-one tailored support for learning; using up-to-date information on student progress to personalize instruction and group students; students tracking their own progress; competency-based practices; and flexible use of staff, space, and time. However, some more-difficult-to-implement aspects did not appear to differ from practices in schools nationally, such as student discussions with teachers on progress and goals; keeping up-to-date documentation of student strengths, weaknesses, and goals; and student choice of topics and materials. We estimate study students gained about 3 percentile points in mathematics relative to a comparison group of similar students. In reading, there was a similar trend, though it was not statistically significant. Low-performing and high-performing students appeared to benefit--Publisher's description.
