Key Features: The book is designed as a supplemental text for courses in physiology and pathophysiology, with concise cases in cellular physiology; nerve cell function; the nervous system including the brain, spinal cord, pain, and autonomic nervous system; the endocrine system; muscle physiology; and the cardiovascular, respiratory, digestive, renal, and immune systems.

Sport and Exercise Psychology Stewart Cotterill,Neil Weston,Gavin Breslin.2016-06-13 SPORT AND EXERCISE PSYCHOLOGICAL "This book is a joy to read and greatly needed. The overall scholarly quality is very strong, and the chapters are clear, accessible, helpful and interesting - a rare combination. There are few texts that examine sport and exercise from a practitioner's perspective, and fewer that help students and trainees navigate the complex terrain of practice. The editors should be congratulated on pulling together a book that educates, inspires, provokes, and will be of practical use." Professor Brett Smith, School of Sport, Exercise and Rehabilitation Sciences, University of Birmingham Sport and Exercise Psychology: Practitioner Case Studies is a contemporary text focusing on current issues in the discipline of sport and exercise psychology. Integrating research and practice in order to develop a coherent

understanding of existing knowledge, future research directions and applied implications within the field, the text explores issues pertinent to the applied practitioner/supervisor and draws on expert commentary to investigate potential solutions to many key issues. Each chapter uses a case study approach to allow internationally recognized contributors to highlight and evaluate their experience across a broad range of sport and exercise performance areas. Practitioners are provided with a full range of available interventions to address specific types of psychological issue including performing under pressure, working with teams, injury rehabilitation, working with coaches, mental toughness, career transitions, athlete well-being, physical activity promotion, exercise and body image, lifestyle interventions, exercise dependence, and motor learning and control. Sport and Exercise Psychology is supported by a range of online materials designed to help both study and practice. It presents content that is directly applicable to those seeking to enter the profession, and which can also inform the ongoing development of reflective practitioners.

Physiology Case Studies in Pharmacy Laurie McCorry.2021-04
Case Studies in Sport Science and Medicine Andrew Michael
Lane,Richard J. Godfrey,Gregory P. Whyte, Mike
Loosemore.2014-05-30 Applied Sport Science and Medicine has

become an integral part of the high-performance environment in recent years despite the relative youth of the discipline. Early work in sport science and sports medicine attempted to adopt approaches employed in the more general and established disciplines of science and medicine. There is a growing recognition that a multidisciplinary support team should act in an interdisciplinary manner to optimise their impact on health and performance. Athletes require information to be given in a user-friendly way and will tend to see issues in a holistic way, raising questions such as what does this mean to me? and is my training going to produce the results when I want it to? Although the terms multidisciplinary and interdisciplinary have become part of normal parlance in the support environment, very few teams provide a truly interdisciplinary approach. This is not criticism of professionals or an excessively bold claim but recognition of the fact that sport and exercise science and medicine has placed emphasis in its research and practice on developing subject-specific experts, such as sport psychologists, physiologists, and so on. Furthermore, the rapid expansion of multi-disciplinary support teams over the past 2 decades, combined with an ever increasing specialisation of individual sport science and medicine disciplines has resulted in confusion for practitioners regarding how best to work closely with their fellow support team members to optimise practice. In recognition of the need for a bespoke, individual tailored approach, this book examines examples of support from a case study perspective across the broad range of sport science and medicine disciplines written by recognised world leaders. This book provides 29 case studies covering physiology, psychology, biomechanics, motor control and performance analysis, nutrition, strength and conditioning and sports medicine. Each case study is presented in a structured format providing a vignette of the case with key information including the challenges faced. The vignette is followed by a contemporary review of the key literature in the field informing

the decision-making process involved in the case study and related differential diagnoses and interventions. The case study is concluded by presenting the intervention and outcome. Each case study is followed by a commentary from another world leader drawing out salient points, expanding the discussion and giving personal insight. We divided the book into three sections. 1. The Reactive Model: Providing solutions for pre-existing problems 2. The Predictive Model: Providing solutions for events that are predicted to occur 3. The Proactive Model: Providing on-going support and developing interdisciplinary teams The book has been written by world-leading practitioners. The four editors have an accumulated experience of over 100 years in applied sport science and medicine and have been discussing the idea of producing a book that highlights the importance of an individualized, case-by-case approach to optimizing health and performance of athletes. The plan was to gain insight into best practice and provide information on elite athlete support from those with first-hand experience, and so we contacted the world's leading practitioners and researchers in sport science and medicine to see if they would like to contribute a chapter or comment on a chapter. Practitioners, athletes, students and anyone interested in sport should find the content of these case studies relevant and useful; they are diverse and capture the range of issues consultants face. Overall, Case Studies in Sport Science and Medicine offers a unique and valuable collection of case studies in a wide range of sport science and medicine disciplines written by world leaders in the field of high-performance sport for those working in the field of sports science and medicine.

Vestibular Disorders Joseph M. Furman, Stephen P. Cass. 2003

This title uses a case study approach to outline the field of dizziness and balance disorders. Written from the combined perspectives of a neurologist and a neurotologic surgeon, each case study describes history, physical examination, laboratory testing, differential diagnosis and treatment. The text includes background material and 59 case studies, five of which concern multiple diagnoses and ten of which address controversial issues.

Balance Disorders Joseph M. Furman, Stephen P. Cass. 1996

Balance Disorders: A Case-Study Approach is the first reference to address balance disorders from a case-study perspective. The text reflects the dual perspective of a neurologist and otolaryngologist and covers both medical and surgical treatments. Three groups of case studies focus on various aspects of the evaluation of the patient with vertigo or balance disorder, patients with common balance disorders, and cases whose balance is disrupted by unusual diseases. Cases become increasingly difficult in moving through the text. Each case is based on an actual patient and points to a clearly stated teaching

Athletic and Orthopedic Injury Assessment David C. C Berry, Michael G. Miller, Leisha M. Berry. 2017-06-30 The case studies in this book use authentic injury assessment examples to help readers link theory and clinical practice with the goal of becoming competent clinicians. The situations are realistic and present more than 130 of the injuries that athletic trainers may encounter in the real world. The questions that accompany the cases ask readers to identify clinical and differential diagnoses, critique the evaluating clinician's actions, recommend treatment, comment on ethical choices, and make many of the decisions they will face in the field. The cases encourage readers to think and problem solve; evidence-based answers (for select cases in the text and for all cases in the instructor's manual) ensure that the recommended clinical decisions are based on the best available research, clinical expertise, and patient preferences rather than on anecdotal practice.
