**Semiconductor Device Reliability** A. Christou,B.A.

Unger.2012-12-06 This publication is a compilation of papers presented at the Semiconductor Device Reliability Workshop sponsored by the NATO International Scientific Exchange Program. The Workshop was held in Crete, Greece from June 4 to June 9, 1989. The objective of the Workshop was to review and to further explore advances in the field of semiconductor reliability through invited paper presentations and discussions. The technical emphasis was on quality assurance and reliability of optoelectronic and high speed semiconductor devices. The primary support for the meeting was provided by the Scientific Affairs Division of NATO. We are indebted to NATO for their support and to Dr. Craig Sinclair, who administers this program. The chapters of this book follow the format and order of the sessions of the meeting. Thirty-six papers were presented and discussed during the five-day Workshop. In addition, two panel sessions were held, with audience participation, where the particularly controversial topics of burn-in and reliability modeling and prediction methods were discussed. A brief review of these sessions is presented in this book.

**Building a New Future** United Nations.2021-05-31 This publication argues that Latin America and the Caribbean are in a position to move towards a big push for sustainability through a combination of economic, industrial, social and environmental policies capable of driving an equal and sustainable recovery and relaunching development in the region. Comprised of five

chapters, the publication studies the three crises (slow growth, growing inequality and the environmental emergency) affecting economies and societies around the world, placing particular focus on those of Latin America and the Caribbean. It goes on to present a framework for analysing these crises in an integrated manner and measuring their magnitude in the specified regions. It then examines the quantitative impacts on growth, emissions, income distribution and the external sector under different policy scenarios, highlighting the potential of various policy combinations to forge a more dynamic growth path, with lower emissions and greater equality. Further identifying seven sectors that can drive sustainable development and proposing policies to foster these sectors, the publication concludes with an analysis that links up macroeconomic, industrial, social and environmental policies and the role of the State in building consensus for their implementation.

*Transforming Acquisitions and Collection Services* Michelle Flinchbaugh, Charles Franklin Thomas, Rob Tench, Vicki Sipe, Robin Barnard Moskal, Lynda L. Aldana, Erica A. Owusu. 2019 This book explores ways in which libraries can reach new levels of service, quality, and efficiency while minimizing cost by collaborating in acquisitions. In consortial acquisitions, a number of libraries work together, usually in an existing library consortia, to leverage size to support acquisitions in each individual library. In cross-functional acquisitions, acquisitions collaborates to support other library functions. For the library acquisitions manager, technical services manager, or the library director, awareness of different options for effective consortial and cross-

functional acquisitions allows for the optimization of staff and resources to reach goals. This work presents those options in the form of case studies, as well as useful analysis of the benefits and challenges of each. By supporting each other's acquisitions services in a consortium, libraries leverage size to get better prices, and share systems and expertise to maximize resources while minimizing costs. Within libraries, the library acquisitions function can be combined with other library functions in a unit with more than one purpose, or acquisitions can develop a close working relationship with another unit to support their work. This book surveys practice at different libraries and at different library consortia, and presents a detailed description and analysis of a variety of practices for how acquisitions units support each other within a consortium, and how they work with other library units, specifically collection management, cataloging, interlibrary loan, and the digital repository, in the form of case studies. A final sections of the book covers fundamentals of collaboration--

### **Facing the Heat Barrier** T. A. Heppenheimer.2009-08

Hypersonics is the study of flight at speeds where aerodynamic heating dominates the physics of the problem. It is an engineering science with close links to supersonics and engine design. Within this field, many of the most important results have been experimental. The principal facilities have been wind tunnels and related devices, which have produced flows with speeds up to orbital velocity. Why is this important? Hypersonics has had two major applications. The first has been to provide thermal protection during atmospheric reentry. Success in this enterprise has supported ballistic-missile nose cones, has returned strategic reconnaissance photos from orbit and astronauts from the Moon, and has even dropped an instrument package into the atmosphere of Jupiter. The second application has involved high-speed propulsion and has sought to develop the scramjet as an advanced airbreathing ramjet. Atmospheric entry today is fully mature as an engineering discipline, but work with its

applications continues to reach for new achievements. Studies of scramjets still seek full success, in which such engines can accelerate a vehicle without the use of rockets. Hence, there is much to do in this area as well.

**Guy de Cointet** Guy de Cointet, Marie de Brugerolle. 2016 Guy de Cointet (American, b. France, 1934-1983) was fascinated with language, which he explored primarily through performance and drawing. His practice involved collecting random phrases, words, and even single letters from popular culture and literary sources--he often cited Raymond Roussel's novel Impressions of Africa as influential--and working these elements into non-linear narratives, which were presented as plays to his audience. Paintings and works on paper would then figure prominently within these performances. In his play *At Sunrise . . . A Cry Was Heard* (1976), a large painting depicting letters bisected by a white sash served as a main subject and prop, with the lead actress continuously referring to it and reading its jumble of letters as if it were an ordinary script. His drawings likewise are almost readable but just beyond comprehension. De Cointet is recognized as one of the major figures in the Conceptual art movement that emerged in Los Angeles in the 1970s, having strongly influenced a number of prominent artists working in southern California today, including Paul McCarthy and Mike Kelley, for whom both drawing and performance figure significantly in their artistic practices. The book, written by Marie de Brugerolle and published with the Estate of Guy de Cointet, is the first to offer an overview of this enigmatic and influential oeuvre. Published with the Estate of Guy de Cointet. Updated, 2016 edition. English Edition. French edition also available 9783037644782

**Eats, Shoots & Leaves** Lynne Truss. 2004-04-12 We all know the basics of punctuation. Or do we? A look at most neighborhood signage tells a different story. Through sloppy usage and low standards on the internet, in email, and now text messages, we have made proper punctuation an endangered species. In *Eats,*

Shoots & Leaves, former editor Lynne Truss dares to say, in her delightfully urbane, witty, and very English way, that it is time to look at our commas and semicolons and see them as the wonderful and necessary things they are. This is a book for people who love punctuation and get upset when it is mishandled. From the invention of the question mark in the time of Charlemagne to George Orwell shunning the semicolon, this lively history makes a powerful case for the preservation of a system of printing conventions that is much too subtle to be mucked about with.

**Communication** National Aeronautics Administration,Douglas Vakoch.2014-09-06 Addressing a field that has been dominated by astronomers, physicists, engineers, and computer scientists, the contributors to this collection raise questions that may have been

overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. These scholars are grappling with some of the enormous challenges that will face humanity if an information-rich signal emanating from another world is detected. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come.

**Think Bayes** Allen B. Downey.2021-05-18 If you know how to program, you're ready to tackle Bayesian statistics. With this book, you'll learn how to solve statistical problems with Python code instead of mathematical formulas, using discrete probability distributions rather than continuous mathematics. Once you get the math out of the way, the Bayesian fundamentals will become clearer and you'll begin to apply these techniques to real-world problems. Bayesian statistical methods are becoming more common and more important, but there aren't many resources available to help beginners. Based on undergraduate classes taught by author Allen B. Downey, this book's computational approach helps you get a solid start. Use your programming skills to learn and understand Bayesian statistics Work with problems involving estimation, prediction, decision analysis, evidence, and Bayesian hypothesis testing Get started with simple examples, using coins, dice, and a bowl of cookies Learn computational methods for solving real-world problems

**Europe and Its Immigrants in the 21st Century** Demetrios G. Papademetriou. 2006 European policymakers are attempting to develop immigration policies that meet economic needs and promote greater competitiveness and growth —without undermining the social models so valued by their electorates. To succeed, they must take into account aging populations, high and persistent levels of overall unemployment, even higher levels of unemployment among immigrants and ethnic minorities, and sector- and location-specific labor mismatches and shortfalls. *Europe and Its Immigrants in the 21st Century* examines many of the critical issues facing European economies and societies with regard to immigration. The authors juxtapose these issues with those facing the traditional countries of immigration (Australia, Canada, New Zealand, and the United States) and offers policy recommendations to address them. Among other topics, this book examines options for immigrant selection and managing all forms of migration better (including irregular migration), and offers recommendations for immigrant and minority integration policies at the EU, national, and local levels - where most integration work takes place. Contributors include Wolfgang Lutz (Vienna Institute for Demography), Klaus Zimmermann (Institute for the Study of Labor/DIW, Berlin), Louka Katseli (OECD), Grete Brochman (Institute for Social Research, University of Oslo), Heaven Crawley (AMRE Consulting), Demetrios G.
