**Syndrome-based Approach to Diagnosis** Efim Benenson.2013-03-12 Many young, inexperienced doctors, have difficulty pinpointing a diagnosis: Is it a condition to which certain diseases could belong, or a disease definable in line with certain criteria? How can I apply my basic knowledge of diseases to a real patient? How can I find the correct diagnosis for a disease that I am seeing for the very first time? The traditional diagnostic pathways conveyed by current methods of teaching, from visual identification of the disease, knowledge of diseases, understanding of symptoms or patterns to diagnosis, leave certain diagnostic questions unanswered, especially on first experience of such a clinical pattern. Syndrome-based Approach to Diagnosis: A Practical Guide offers lecturers an alternative training concept in their teaching, which provides students with a model for self-study as well as the educational tools for learning how to think in clinical terms.

**Data Mining and Multi-agent Integration** Longbing Cao.2009-07-25 Data Mining and Multi agent Integration aims to reflect state of the art research and development of agent mining interaction and integration (for short, agent mining). The book was motivated by increasing interest and work in the agents data mining, and vice versa. The interaction and integration comes about from the intrinsic challenges faced by agent technology and data mining respectively; for instance, multi agent systems face the problem of enhancing agent learning capability, and avoiding the uncertainty of self organization and intelligence emergence. Data mining, if integrated into agent systems, can greatly enhance the learning skills of agents, and assist agents with predication of future states, thus initiating follow up action or intervention. The data mining community is now struggling with mining distributed, interactive and heterogeneous data sources. Agents can be used to manage such data sources for data access, monitoring, integration, and pattern merging from the infrastructure, gateway, message passing and pattern delivery perspectives. These two examples illustrate the potential of agent mining in handling challenges in respective communities. There is an excellent opportunity to create innovative, dual agent mining interaction and integration technology, tools and systems which will deliver results in one new technology.

*A diagnostic tool for implementing an ecosystem approach to fisheries through policy and legal frameworks* Food and Agriculture Organization of the United Nations .2021-01-29 The implementation of an ecosystem approach to fisheries (EAF) contributes to sustainable fisheries in various ways. One of them is by reviewing national policy and legal instruments to identify gaps which prevent a country from progressing towards full alignment with, and implementation of, an EAF. This diagnostic tool builds on the previous work of FAO by translating the 17 EAF components identified in the How-to Guide on legislating for an EAF into an EAF Legal Checklist for legal practitioners, policymakers and fisheries managers to use in conducting a preliminary assessment of selected policy and legal instruments and determining whether they are congruent an EAF. The outcomes of the assessment may result in decisions to amend existing national policies and/or legislation, or develop new policy and legal instruments that are aligned with the 17 EAF components, to ensure the full implementation of an EAF towards improving, in a holistic way, the conservation and sustainable use of marine resources, biodiversity and ecosystems.
